## Foreword

The Household Consumer Expenditure surveys of National Sample Survey (NSS) are primary sources of data on various indicators of level of living, pattern of consumption and well-being of households at the National and State levels. These are used for planning, policy formulation, decision support and as input for further statistical exercises by various Government organizations, academicians, researchers and scholars. NSS surveys on consumer expenditure with large sample size of households have been conducted quinquennially from 27<sup>th</sup> round (October 1972 – September 1973) onwards. The NSS 66<sup>th</sup> round carried out during July 2009 – June 2010 was the eighth quinquennial round in the series, covering the subjects of (i) Household Consumer Expenditure and (ii) Employment and Un-employment.

The NSS round on Household Consumer Expenditure provides the database for calculation of poverty estimates by the Planning Commission. For past several years the Planning Commission used to estimate the proportion of people below poverty line following the Lakdawala Committee method. However, recently an Expert Group under the chairmanship of Prof. Suresh D Tendulkar developed a new methodology with a view to provide a more realistic estimate of poverty in the country. In so far as NSS is concerned, it was more reassuring that Prof. Tendulkar in his report recommended that the NSS data on Consumer Expenditure should continue to be made use of for estimating poverty. This undoubtedly indicates his trust in reliability and credibility of the NSS data. The NSSO made an attempt to bring out the results of the 66<sup>th</sup> Round Survey on Consumer Expenditure quickly so that the more recent estimates of poverty based on the new methodology could be arrived at by Prof. Tendulkar himself. But before we could bring out the results the Prof. left us for ever. We hope he will continue to guide and advise the NSSO from his Heavenly Abode. This report is dedicated to Late Prof. Suresh D. Tendulkar.

New Delhi

### Detailed Tables

1A-R, 1A-U	Per capita food, non-food & total expenditure and upper class limit for each decile class of MPCE <sub>URP</sub> <i>all States and UTs</i>	21 - 44
1B-R, 1B-U	Per capita food, non-food & total expenditure and upper class limit for each decile class of MPCE <sub>MRP</sub> <i>all States and UTs</i>	45 - 68
1C-R, 1C-U	Per capita food, non-food & total expenditure and upper class limit for each decile class of MPCE <sub>MMRP</sub> <i>all States and UTs</i>	69 - 92
2A	Break-up of average MPCE <sub>URP</sub> (absolute & percentage) by broad item group <i>all-India</i>	93
2B	Break-up of average MPCE <sub>MRP</sub> (absolute & percentage) by broad item group <i>all-India</i>	94
2C	Break-up of average MPCE <sub>MMRP</sub> (absolute & percentage) by broad item group <i>all-India</i>	95
3R, 3U	Monthly per capita quantity and value of consumption for food items, all-India: MMRP estimates	96 – 103
4R, 4U	Monthly per capita quantity and value of consumption for non-food items, all-India: MMRP estimates	104 - 115

# Chapter One

## Introduction

### 1.1 Background

1.1.1 The National Sample Survey Office (NSSO) conducts nationwide household consumer expenditure surveys at regular intervals as part of its “rounds”, each round normally of a year’s duration. The NSS surveys are conducted through interviews of a random sample of households selected through a scientific design and cover practically the entire geographical area of the country.

1.1.2 The household consumer expenditure survey (CES) is generally covered as one of the main subjects of the NSS survey at quinquennial intervals. This provides a series of CES’s. The 66<sup>th</sup> round survey (July 2009 - June 2010) was the eighth such survey of this quinquennial series, the seventh having been conducted during the 61<sup>st</sup> round (July 2004 - June 2005). The key indicators on household consumption in India during 2009-10 based on data collected through the 66<sup>th</sup> round of NSS are presented here.

### 1.2 Objective of the survey

1.2.1 The NSS consumer expenditure survey aims at generating estimates of household monthly per capita consumer expenditure (MPCE) and its distribution separately for the rural and urban sectors of the country, for States and Union Territories, and for different socio-economic groups. These indicators are amongst the most important measures of the level of living of the respective domains of the population. The distribution of MPCE highlights the differences in level of living of the different segments of the population and is an effective tool to study the prevalence of poverty and inequality. These numbers enable the apex planning and decision-making process to allocate the nation’s resources among sectors, regions, and socio-economic groups, and assess the “inclusiveness” of economic growth.

1.2.2 Besides measuring the household consumption level and its pattern, the CES has another important use. To work out consumer price indices (CPIs) which measure the general rise in consumer prices, one needs to know not only the price rise for each commodity group but also the budget shares of different commodity groups (used as weights). The budget shares as revealed by the NSS CES are being used to prepare the weighing diagram for official of CPIs. More extensive use of NSS CES data is planned to have a weighing diagram that uses a finer commodity classification, to prepare CPIs separately for rural and urban and at sub-national level.

1.2.3 Apart from these major uses of the CES, the food (quantity) consumption data are used to study the level of nutrition of different regions and disparities therein, and in studying demand and supply of commodities. The budget share of a commodity at different MPCE levels facilitates the compilation of consumption elasticity or responsiveness of demand.

### 1.3 Genesis of the CES

1.3.1 *The quinquennial series:* Beginning from the first round (1950-51) of the National Sample Survey (NSS), data on household consumer expenditure were collected in every round up to the 28<sup>th</sup> (1973-74). After the 26<sup>th</sup> round of the survey, the Governing Council of NSSO decided that the surveys on consumer expenditure and employment-unemployment situation might be undertaken together on a large scale once in every five years. Accordingly, "quinquennial" surveys on consumer expenditure and employment-unemployment surveys were conducted in the 27<sup>th</sup>, 32<sup>nd</sup>, 38<sup>th</sup>, 43<sup>rd</sup>, 50<sup>th</sup>, 55<sup>th</sup>, 61<sup>st</sup> and 66<sup>th</sup> rounds of NSS, at roughly 5-year intervals.

1.3.2 *The annual series:* In the mid-80's, the need for an annual series of data on consumer expenditure began to be felt by planners and research workers. The Governing Council therefore decided (i) that the quinquennial consumer expenditure-cum-employment surveys would be carried on as before, and (ii) that every other round of NSS, starting from the 42<sup>nd</sup> (1986-87), would include a smaller-scale consumer expenditure survey with 2 (increased to 4 from 1993 onwards) sample households per sample village/block with a slightly abridged schedule of enquiry. For two decades thereafter, every round of NSS included either a CES of the quinquennial series or a CES of the annual series. However, in two recent rounds of NSS – the 65<sup>th</sup> and the 67<sup>th</sup> – there was no survey of consumer expenditure.

### 1.4 Reports of the 66<sup>th</sup> round CES

1.4.1 The results of NSS rounds are released in reports based on comprehensive tabulation of subject parameters and indicators in various cross-classifications generated from the Central sample<sup>1</sup> data. Corresponding to NSS 66<sup>th</sup> round quinquennial survey on household consumer expenditure, the results are planned for release in seven reports. The tentative titles of these reports are:

1. Level and Pattern of Consumer Expenditure, 2009-10
2. Household Consumption of Various Goods and Services in India, 2009-10
3. Public Distribution System and Other Sources of Household Consumption, 2009-10
4. Energy Sources of Indian Households for Cooking and Lighting, 2009-10
5. Nutritional Intake in India, 2009-10
6. Household Consumer Expenditure among Socio-Economic Groups, 2009-10
7. Perceived Adequacy of Food Consumption in Indian Households, 2009-10

### 1.5 Contents of this document

1.5.1 This document brings out the key results of NSS 66<sup>th</sup> round within a year of completion of the field work for use in decision support, policy inferences and salient analysis. It contains three chapters and four appendices. Following the present introductory chapter (Chapter One), Chapter Two outlines the features of the Consumer Expenditure Survey along with its conceptual framework and the architecture of the key indicators from

---

<sup>1</sup>Refer to Chapter Two, paragraph 2.2.3.1.

the 66<sup>th</sup> round CES. A brief summary of the information contained in the key indicators is presented in Chapter Three, followed by the State/UT and all-India tables of key indicators. Appendix A contains the basic definitions and procedures followed in the survey and in this document other than those discussed in Chapter Two. Appendix B gives details of the sample design and estimation procedure followed. In order to facilitate computation of the absolute figures of aggregated consumption in the population domain, the projected population at the mid-year reference 1<sup>st</sup> January 2010 based on the population projections by the Registrar-General of India are provided in Appendix C. Appendix D consists of the schedules of enquiry (Schedule 1.0, Type 1 and Type 2) that were canvassed in the surveyed households.

1.5.2 The indicators presented in this document (separately for  $MPCE_{URP}$ ,  $MPCE_{MRP}$  and  $MPCE_{MMRP}$ )<sup>2</sup> are

A. State-sectorwise and all-India-sectorwise

- Deciles<sup>3</sup> (upper limits of decile classes) of the distribution of population by MPCE
- Average MPCE by decile class of MPCE
- Per capita food expenditure by decile class of MPCE
- Per capita non-food expenditure by decile class of MPCE

B. All-India, sectorwise

- Break-up of average MPCE (absolute and percentage) by broad item group (14 groups of food items and 18 groups of non-food items)
- Estimates of itemwise quantity<sup>4</sup> and value of per capita consumption

1.5.3 Estimates of per capita monthly expenditure on food, non-food and total expenditure are provided separately for rural and urban sectors at the state level as well as for all-India across decile classes of MPCE. However, break-up of average MPCE by broad item group of food and non-food items, and itemwise estimates of quantity and value of per capita consumption are given at the all-India level.

1.5.4 The estimates of key indicators of household consumer expenditure are presented here for all-India and for the States and UTs. The estimates of MPCEs are ratios and are expected to be reasonably robust at national level and for larger States. While using the estimates for smaller States, it may be kept in view that the sample for them may not be large enough for getting sufficiently reliable estimates.

<sup>2</sup> These are the three different estimates of MPCE generated by the 66<sup>th</sup> round consumer expenditure survey. They are explained in detail in Chapter Two, Section 2.5.

<sup>3</sup> Deciles and decile classes of the MPCE distribution are explained in Appendix A, paragraph 1.6, and also in Chapter Three, paragraph 3.1.3.

<sup>4</sup> Quantity estimates are provided for all items for which data on quantity consumed was collected.

## Chapter Two

### Features of the consumer expenditure survey

#### 2.1 Schedules of enquiry

2.1.1 The household consumer expenditure schedule (“Schedule 1.0”) used for the survey collected information on quantity<sup>5</sup> and value of household consumption. To minimise recall errors, a very detailed item classification was, as usual, adopted to collect information, including 142 items of food, 15 items of energy (fuel, light and household appliances), 28 items of clothing, bedding and footwear, 19 items of educational and medical expenses, 51 items of durable goods, and 89 other items. The schedule also collected some other particulars of each household member, such as age, sex and educational level.

2.1.2 The schedules of enquiry used were of two types. The two types had the same item break-up but differed in reference periods used for collection of consumption data. Schedule Type 1, as far as reference periods were concerned, was a repeat of the schedule used in most quinquennial rounds. For certain categories of relatively infrequently purchased items, including clothing and consumer durables, it collected information on consumption during the last 30 days and the last 365 days. For other categories, including all food and fuel and consumer services, it used a 30-days reference period. Schedule Type 2 used ‘last 365 days’ (only) for the infrequently purchased categories, ‘last 7 days’ for some categories of food items, as well as pan, tobacco and intoxicants, and ‘last 30 days’ for other food items, fuel, and the rest. This was in line with the recommendations of an Expert Group that had been formed for the purpose of suggesting the most suitable reference period for each item of consumption<sup>6</sup>. The differences (in reference period) between Schedule Types 1 and 2 are shown in Table T1.

**Table T1: Reference periods used for collection of consumption data in Schedule 1.0, Type 1 and Type 2**

Category	Item groups	Reference period for	
		Schedule Type 1	Schedule Type 2
I	Clothing, bedding, footwear, education, medical (institutional), durable goods	‘Last 30 days’ and ‘Last 365 days’	Last 365 days
II	Edible oil; egg, fish & meat; vegetables, fruits, spices, beverages and processed foods; pan, tobacco & intoxicants	Last 30 days	Last 7 days
III	All other food, fuel and light, miscellaneous goods and services including non-institutional medical; rents and taxes	Last 30 days	Last 30 days

<sup>5</sup> For education, medical care, and some goods and services listed in the schedule as “miscellaneous goods and services”, no data on quantity of consumption are collected in the NSS CES’s.

<sup>6</sup> See NSS Report no. 475; entitled “Results of a Pilot Survey on Suitability of Different Reference Periods for Measuring Household Consumption”.

2.1.3 Schedule Type 1 was canvassed in one half of the sample households and Schedule Type 2 was canvassed in the other half<sup>7</sup>.

## 2.2 Scope and coverage

2.2.1 *Geographical coverage:* The survey covered the whole of the Indian Union *except* (i) (ii) interior villages of Nagaland situated beyond five kilometres of the bus route and (iii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. *However, although planned, no sample could actually be surveyed in the districts of Leh (Ladakh), Kargil and Poonch of Jammu & Kashmir by NSSO.*

2.2.2 *Population coverage:* The following rules were followed:

1. Floating population, i.e., persons without any normal residence, was excluded. But persons residing in open space, roadside shelter, under a bridge, etc., more or less regularly in the same place were covered.
2. Foreign nationals were excluded, as well as their domestic servants, if by definition the latter belonged to the foreign national's household (see Appendix B for definition of household). A foreign national who had become an Indian citizen for all practical purposes was, however, covered.
3. Persons residing in barracks of military and paramilitary forces (like police, BSF etc.) were kept outside the survey coverage. However, the civilian population residing in their neighbourhood, including the family quarters of service personnel, was covered.
4. Orphanages, rescue homes, ashrams and vagrant houses were outside the survey coverage. However, the persons staying in old age homes, the students staying in ashram/hostels and the residential staff (other than monks/nuns) of these ashrams were covered. Although orphans living in orphanages were excluded, the persons looking after them and staying there were covered. Convicted prisoners undergoing sentence were outside the coverage of the survey.

### 2.2.3 Sample size

2.2.3.1 *First-stage units:* As is usual in the regular NSS rounds, most States and Union Territories participated in the survey: a “State sample” was surveyed by State Government officials in addition to the “Central sample” surveyed by NSSO. For rural India, 7,524 villages formed the Central sample for this round. Of these, 7,428 villages were ultimately surveyed. In the urban sector, the allocation for the Central sample was 5,284 blocks, of which 5,263 were surveyed. This document is based on the estimates obtained from the Central sample only.

2.2.3.2 *Second-stage units:* For the consumer expenditure survey, from each sample village and urban block, two samples of 8 households each were selected for canvassing Schedule

---

<sup>7</sup> There could be a very few cases where in the same household, both Type 1 and Type 2 schedules of Schedule 1.0 were canvassed due to some special situations while conducting actual survey in the field.

Type 1 and Schedule Type 2. While selecting the households in each selected first-stage unit, the second-stage stratification of households is in-built in the sample design. The features of the sample design are given in Appendix C.

**Table T2: Number of villages/blocks surveyed and number of households surveyed for Schedule 1.0 Type 1 and Type 2: NSS 66<sup>th</sup> round, Central sample**

State/UT	no. of fsu's (villages/blocks) surveyed		no. of sample households

2.2.3.3 Table T2 shows the numbers of villages and urban blocks allotted for survey and actually surveyed, and, for each of the two schedule types, the numbers of rural and urban sample households in which the consumer expenditure schedule was canvassed.

## 2.3 Conceptual framework

2.3.1 **Reference period:** The consumption of any good or service by a household or person occurs in the form of a flow over time. The survey may need to record the volume of consumption over a short period such as a day, or a long period such as a year. The time period for which consumption is recorded is called the reference period. It may vary from item to item. Because the respondents are asked to recall and report the volume of consumption, the reference period is also called the recall period.

2.3.2 **Household consumer expenditure:** The expenditure incurred by a household on domestic consumption during the reference period is the household's consumer expenditure. Expenditure incurred towards productive enterprises of households is excluded from household consumer expenditure. Also excluded are expenditure on purchase and construction of residential land and building, interest payments, insurance premium payments, payments of fines and penalties, and expenditure on gambling including lottery tickets. Money given as remittance, charity, gift, etc. is not consumer expenditure. However, self-consumed produce of own farm or other household enterprise is valued and included in household consumer expenditure. So are goods and services received as payment in kind or free from employer, such as accommodation and medical care, and travelling allowance excluding allowance for business trips.

2.3.2.1 For articles of food (including *pan*, tobacco and intoxicants) and fuel, household consumption is measured by the *quantity of the article actually used* by the household during the reference period, irrespective of the expenditure incurred on it. For articles of clothing and footwear, consumption by a household is considered to occur at the moment when the article is brought into maiden or first use by any household member. The consumption may be out of (a) purchases made in cash or credit during the reference period or earlier; (b) home-grown stock; (c) receipts in exchange of goods and services; (d) any other receipt like gift, charity, borrowing and (e) free collection. Home produce is evaluated at the ex farm or ex factory rate.

2.3.2.2 For evaluating household consumption of all other items, a different approach is followed: the *expenditure* made by the household during the reference period for the purchase or acquisition of goods and services, regardless of when the goods and services are used and by whom, is considered as household consumption. However, for a few items of expenditure such as rent, telephone charges, consumer taxes and railway season tickets, expenditure during the month is recorded as the amount that was last paid divided by the number of months to which the payment related.

2.3.2.3 It is pertinent to mention here that the consumer expenditure of a household on food items relates to the actual consumption by the members of the household and also by the guests during ceremonies or otherwise. Normally, transfers of food, fuel, clothing and footwear made

by a household as charity, loan advance, etc. are not considered as consumption of that household, since consumption out of all transfer receipts of these items have to be included. However, meals prepared in a household and served to non-household members are an exception to this rule. Meals prepared in the household kitchen and provided to the employees and/or others would automatically get included in domestic consumption of employer (payer) household. There is a practical difficulty of estimating the quantities and values of individual items used for preparing the meals served to employees or others. Thus, to avoid double counting, cooked meals received as perquisites from employer household or as gift or charity are not recorded in the recipient household. As a general principle, cooked meals purchased from the market for consumption of the members and for guests are also recorded in the purchaser household. This procedure of recording cooked meals served to others in the expenditure of the serving households leads to bias-free estimates of average per capita consumption as well as total consumer expenditure.

2.3.2.4 All goods and services received as payment in kind or perquisites are included in the consumption of the recipient household as goods and services received in exchange of services, except for meals received from other households' kitchens.

2.3.2.5 To simplify data collection, consumption of food processed *in the home* from one "item" into another, such as milk converted into curd or butter, vegetables converted into pickles, and rice converted into liquor are recorded in the survey against the primary or ingredient item(s), such as milk, instead of the item in which form it is consumed (e.g. curd). For some item groups such as intoxicants, this procedure leads to an underestimation of consumption with a corresponding overestimation of the item groups of the major ingredients, such as cereals.

2.3.3 **Value of consumption:** For items of food, *pan*, tobacco, intoxicants, fuel, clothing and footwear, this term is not synonymous with expenditure incurred by the household on the item, and the following rules of valuation are specified. Consumption out of purchase is evaluated at the purchase price. Consumption out of home produce is evaluated at ex farm or ex factory rate. Value of consumption out of gifts, loans, free collections, and goods received in exchange of goods and services is imputed at the rate of average local retail prices prevailing during the reference period.

## 2.4 Monthly per capita expenditure (MPCE)

2.4.1 Normally, the concept of per capita income – or per capita (overall) expenditure, if income data are not available – is used for comparison of average living standards between countries, between regions, and between social or occupational groups. For studies of poverty and inequality *within* populations, however, average income or average expenditure is not enough. One needs to assign a value that indicates level of living to *each individual*, or at least to each household, in a population in order to know the level of inequality in living standards of the population, or the proportion living in poverty.

2.4.2 The NSS concept of MPCE, therefore, is defined first at the household level (household monthly consumer expenditure  $\div$  household size). This measure serves as the indicator of the household's level of living.

2.4.3 Next, each *individual's* MPCE is defined as the MPCE of the household to which the person (man, woman or child) belongs. This assigns to each person a number representing his or her level of living. The distribution of *persons* by their MPCE (i.e., their household MPCE) can then be built up, giving a picture of the population classified by economic level.

## 2.5 The three estimates of average and distribution of MPCE obtained from the 66<sup>th</sup> round survey

2.5.1 From each sample household where Schedule Type 1 was canvassed, two measures of MPCE emerged. This was because for each such household, there were two sets of data for Category I items (see Table T1) – “last 30 days” data and “last 365 days” data – unlike items of Categories II and III, for which only “last 30 days” was available. Thus there were two ways of measuring household MPCE: one using “last 30 days” for all items, and the other using “last 365 days” data for Category I items and “last 30 days” for the rest. The first measure of MPCE is called MPCE<sub>URP</sub> (Uniform Reference Period MPCE) and the second, MPCE<sub>MRP</sub> (Mixed Reference Period MPCE). From data on MPCE<sub>URP</sub> and MPCE<sub>MRP</sub> (collected from households where Schedule Type 1 was canvassed), two alternative estimates of the distribution of MPCE and average MPCE can be built up.

2.5.2 From each sample household where Schedule Type 2 was canvassed, a single measure of MPCE emerged, as, for each item of consumption, data for only one reference period had been collected. Since the reference period system used for Schedule Type 2 was only a slight modification of the Mixed Reference Period (differing only in the reference period used for Category II items), this measure of MPCE was called the MPCE<sub>MMRP</sub> (Modified Mixed Reference Period MPCE). The estimates of the distribution of MPCE and average MPCE that can be built up from Schedule Type 2 data are therefore called the estimates of MPCE<sub>MMRP</sub>.

## Chapter Three

### Key findings of NSS 66<sup>th</sup> round survey on household consumer expenditure

#### 3.1 A note on the survey results

3.1.1 As explained in the previous section, in the 66<sup>th</sup> round CES, the data on household consumption was collected with three reference periods of preceding 7 days, 30 days and 365 days for specified set of items of the consumption basket (please refer to Table T1, page 4). The survey architecture involving alternative reference periods was evolved after the empirical analysis in the past to capture consumption more appropriately, wherein it was noted that the composition of reference periods in Schedule Type 2 meets the objective better than Schedule Type 1, adopted in the previous quinquennial round (NSS 61<sup>st</sup> round). Thus the NSS 66<sup>th</sup> round brings out three alternative estimates of MPCE.  $MPCE_{URP}$  and  $MPCE_{MRP}$ , arrived at on the basis of Schedule (1.0) Type 1, provide estimates comparable with NSS 61<sup>st</sup> round and  $MPCE_{MMRP}$  is a new set of estimates based on Schedule (1.0) Type 2.

3.1.2 The detailed results presented in this document are mainly based on  $MPCE_{MMRP}$ . However, relevant indicators based on  $MPCE_{URP}$  and  $MPCE_{MRP}$  are also given for comparability.

3.1.3 Besides the average MPCE, the survey results also provide distribution of population over decile classes of MPCE. Thus the first decile class comprises the bottom 10 percent of population in terms of MPCE and the top (10<sup>th</sup>) decile class comprises the top 10 percent of population. These decile classes for rural and urban domains are separately arrived at for  $MPCE_{URP}$ ,  $MPCE_{MRP}$  and  $MPCE_{MMRP}$ . Further, in addition to all-India decile classes, similar State-specific decile classes are also derived and Statewise results are given for these classes in the detailed tables.

#### 3.2 Average $MPCE_{MMRP}$

3.2.1 Average MPCE in 2009-10 was estimated as Rs.1053.64 in rural India and Rs.1984.46 in urban India (Table T3). Thus the per capita expenditure level of the urban population was on the average about 88% higher than that of the rural population.

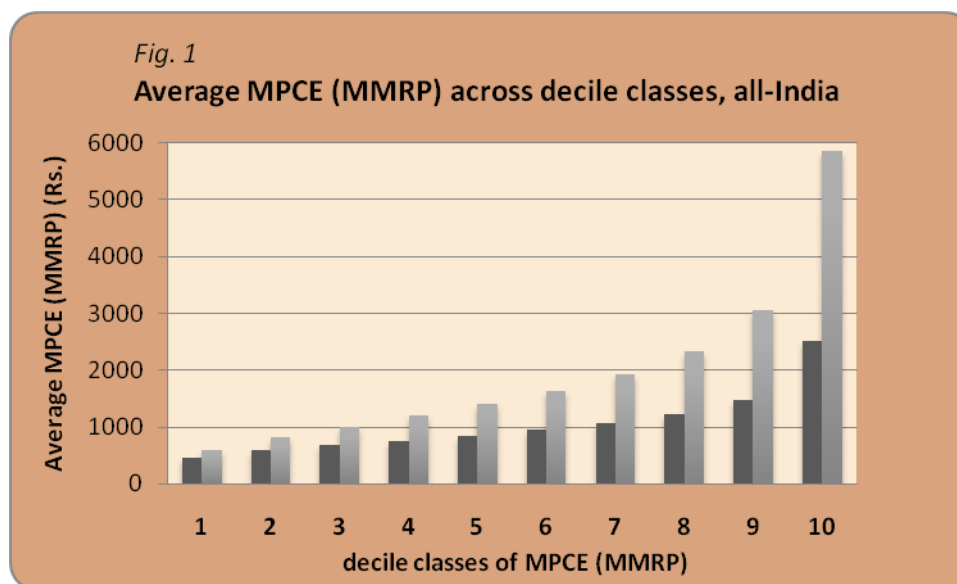

3.2.2 The poorest 10% of India's rural population had an average MPCE of Rs.453. The poorest 10% of the urban population had an average MPCE of Rs.599. (See Fig. 1.)

3.2.3 The top 10% of the rural population, ranked by MPCE, had an average MPCE of Rs.2517 – about 5.6 times that of the bottom 10%. The top 10% of the urban population had an average MPCE of Rs.5863 – about 9.8 times that of the bottom 10%.

3.2.4 Fig.2 shows average  $MPCE_{MMRP}$  in rural and urban sectors of the major States of India. In Table T4, the major States have been arranged in ascending order of average  $MPCE_{MMRP}$  in the rural sector. Among the major States, Kerala (Rs.1835) had the highest

rural MPCE. It was followed by Punjab (Rs.1649) and Haryana (Rs.1510). In all other major States, average rural MPCE was between Rs.750 and Rs.1250.

3.2.5 Average rural MPCE was lowest in Bihar and Chhattisgarh (around Rs.780), and also low in Orissa and Jharkhand (around Rs.820), as well as in Uttar Pradesh and Madhya Pradesh (around Rs.900).

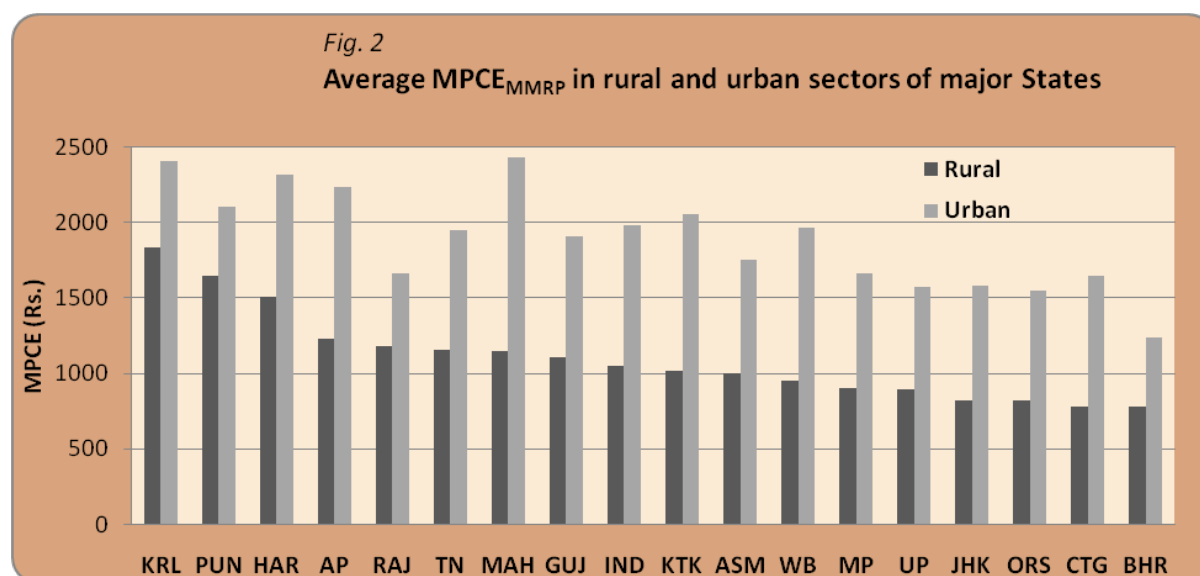

3.2.6 Maharashtra (Rs.2437) and Kerala (Rs.2413) were the two major States with the highest MPCE in the urban sector, followed by Haryana (Rs.2321). The other major States with average urban MPCE higher than the all-India average were Andhra Pradesh (Rs.2238), Punjab (Rs.2109) and Karnataka (Rs.2053).

**Table T3: Average  $MPCE_{MMRP}$  across decile classes of  $MPCE_{MMRP}$ , all-India**

rural India		urban India	
decile class of $MPCE_{MMRP}$	average $MPCE_{MMRP}$ (Rs.)	decile class of $MPCE_{MMRP}$	average $MPCE_{MMRP}$ (Rs.)
(1)	(2)	(3)	(4)
1 <sup>st</sup>	452.98	1 <sup>st</sup>	599.27
2 <sup>nd</sup>	584.40	2 <sup>nd</sup>	830.96
3 <sup>rd</sup>	675.35	3 <sup>rd</sup>	1011.84
4 <sup>th</sup>	760.79	4 <sup>th</sup>	1196.08
5 <sup>th</sup>	848.07	5 <sup>th</sup>	1397.99
6 <sup>th</sup>	944.35	6 <sup>th</sup>	1633.42
7 <sup>th</sup>	1062.93	7 <sup>th</sup>	1930.96
8 <sup>th</sup>	1220.59	8 <sup>th</sup>	2329.87
9 <sup>th</sup>	1470.33	9 <sup>th</sup>	3050.69
10 <sup>th</sup>	2516.69	10 <sup>th</sup>	5863.25
all classes	1053.64	all classes	1984.46

3.2.7 Urban MPCE was lowest in Bihar (Rs.1238). No other major State had urban MPCE below Rs.1500. Orissa, Uttar Pradesh and Jharkhand all had average MPCE between Rs.1545 and Rs.1585. In Chhattisgarh, Rajasthan and Madhya Pradesh, average MPCE was between Rs.1645 and Rs.1670.

3.2.8 Average urban MPCE was only 28% higher than average rural MPCE in Punjab, only 31% higher than average rural MPCE in Kerala, and only 41% higher in Rajasthan. In Maharashtra and Chhattisgarh, on the other hand, average urban MPCE was around 110% higher than average rural MPCE. In West Bengal and Karnataka, too, per capita expenditure in the urban sector was more than double that in the rural.<sup>8</sup>

**Table T4: Average MPCE<sub>MMRP</sub> and food share: major States**

State	rural			urban		
	average MPCE (Rs.)	per capita food exp. (Rs.)	% share of food in cons. exp.	average MPCE (Rs.)	per capita food exp. (Rs.)	% share of food in cons. exp.

Kerala	1835	843	45.9	2413	970	40.2

<sup>8</sup> Abbreviations used for State names in Fig.2 have been explained on page 13.

### 3.3 Median and deciles of the MPCE<sub>MMRP</sub> distribution

3.3.1 Table T5 (R & U) shows the first to ninth deciles (including the median, which is the 5<sup>th</sup> decile) of the rural and urban MPCE<sub>MMRP</sub> distributions in India and its States.

3.3.2 While average rural MPCE was Rs.1054, the median level of rural MPCE was Rs.895 – half the rural population belonged to households with MPCE below this level (Table T5-R).

3.3.3 In urban India, where average MPCE was Rs.1984, the median level of MPCE was Rs.1502 – half the urban population had MPCE below this level (Table T5-U).

3.3.4 Nearly 40% of the rural population of India had MPCE below Rs.800 and about 60% had MPCE below Rs.1000. About 10% had MPCE above Rs.1650.

3.3.5 About 70% of the urban population of India had MPCE above Rs.1100, nearly 30% had MPCE above Rs.2100, and 20% had MPCE above Rs.2600.

3.3.6 In Jharkhand, Chhattisgarh and Bihar, less than 50% of the rural population had MPCE above Rs.710. More than 70% of the rural population of Jharkhand and Orissa had MPCE below Rs.900, the percentage being still higher in Chhattisgarh and Bihar.

3.3.7 The percentage of rural population with MPCE above Rs.1000 exceeded 70% in Haryana and Punjab, while in Kerala 80% of the rural population had MPCE exceeding Rs.977.

3.3.8 Only 10% of the urban population of Punjab and Haryana, and only a slightly higher percentage in Kerala and Tamil Nadu, had MPCE below Rs.850, compared to a little less than 30% in Jharkhand and over 40% in Bihar.

### 3.4 Share of food in consumer expenditure (MMRP)

3.4.1 Per capita food expenditure in rural India as a whole was estimated at Rs.600 for rural India and Rs.881 for urban India (Table T4). This means that the share of food in consumer expenditure was 57% in rural India and 44.4% in urban India. It is seen that in rural India, the food share ranges from under 46% in Kerala to 64-65% in Bihar and Assam. In the urban sector, the food share ranges from 40.2% in Kerala to nearly 53% in Bihar and Assam. Also, States with low average MPCE tend to have a higher share of food in total consumer expenditure.

The k<sup>th</sup> decile is the level of MPCE below which 10k% of the urban population lies; k=1 to 9. The deciles may also be called the 10<sup>th</sup>, 20<sup>th</sup>, ... , 90<sup>th</sup> percentiles.

### 3.5 Trends in level of consumption in monetary and real terms

#### 3.5.1 Trends from MPCE<sub>URP</sub> estimates

3.5.1.1 Table T6 below shows estimates of all-India average MPCE<sub>URP</sub> from four quinquennial surveys of consumer expenditure including the 66<sup>th</sup> round survey. (URP estimates cannot be obtained from the 55<sup>th</sup> round quinquennial survey.) For rural India, real MPCE (measured using a price deflator with 1987-88 as base) is seen to have grown from Rs.158.10 in 1987-88 to Rs.187.79 in 2009-10 – an increase of only 19% over 22 years. In urban India there has been a substantially higher growth in real MPCE (obtained using a similar deflator with base 1987-88) – from Rs.249.92 in 1987-88 to Rs.355.03 in 2007-08 – an increase of 42% in the 22 year-period since 1987-88. The growth in urban MPCE over the 16-year period since 1993-94 has been about 34%.

**Table T6: Growth in MPCE<sub>URP</sub> at current and constant prices since 1987-88, all-India**

#### 3.5.2 Trends from MPCE<sub>MRP</sub> estimates

3.5.2.1 While Table T6 above gives estimates obtained by the URP method, a corresponding table of estimates of MPCE obtained by the MRP method at current and constant prices is shown below (Table T7). For 1987-88, MRP estimates are not available. In terms of the MRP estimates, MPCE in rural India has grown from Rs.162.56 in 1993-94 to Rs.192.93 in 2009-10 – that is, by about 19% in 16 years<sup>9</sup>. Urban MPCE has grown from Rs.268.38 in 1993-94 to Rs.368.99 in 2009-10 – a growth of 37½% over the 16-year period since 1993-94.

<sup>9</sup> Over the same period, the growth of rural MPCE computed using the URP estimates (Table 3.4) comes to about 17½%.

**Table T7: Growth in MPCE<sub>MRP</sub> at current and constant prices since 1993-94, all-India**

characteristic	year			
	1993-94	1999-2000	2004-05	2009-10

### 3.5.3 Ranking of States by MPCE<sub>MRP</sub> – 66<sup>th</sup> and 61<sup>st</sup> round results

3.5.3.1 Table T8 shows the rankings of the major States of India by rural and urban MPCE<sub>MRP</sub> from the 66<sup>th</sup> and 61<sup>st</sup> round surveys of consumer expenditure.

**Table T8: Rankings of major States by rural and urban MPCE<sub>MRP</sub> from the 66<sup>th</sup> round (2009-10) and the 61<sup>st</sup> round (2004-05) of NSS**

State	Rural		State	Urban	
	Ranking by MPCE <sub>MRP</sub> (highest =1)			Ranking by MPCE <sub>MRP</sub> (highest =1)	
	2009-10	2004-05		2009-10	2004-05
(1)	(2)	(3)	(4)	(5)	(6)
Kerala	1	1	Kerala	1	1
Punjab	2	2	Maharashtra	2	3
Haryana	3	3	Punjab	3	2
Andhra Pradesh	4	5	Karnataka	4	8
Gujarat	5	4	Andhra Pradesh	5	10
Maharashtra	6	8	Haryana	6	5
Rajasthan	7	7	Gujarat	7	4
Tamil Nadu	8	6	West Bengal	8	7
Karnataka	9	11	Tamil Nadu	9	6
Assam	10	9	Assam	10	9
West Bengal	11	10	Rajasthan	11	13
Uttar Pradesh	12	12	Madhya Pradesh	12	14
Madhya Pradesh	13	13	Uttar Pradesh	13	15
Jharkhand	14	16	Orissa	14	16
Orissa	15	17	Jharkhand	15	11
Bihar	16	14	Chhattisgarh	16	12
Chhattisgarh	17	15	Bihar	17	17

3.5.3.2 It is seen from Table T8 that in the rural sector, the top three States as determined by the 61<sup>st</sup> round survey have retained their positions in the 66<sup>th</sup> round and that no State has undergone a change in rank of more than 2. In the urban sector, on the other hand, the ranks of four States have altered by 4 or more, and only the ranks of the top and bottom States have remained unchanged.

### 3.6 Trends in pattern of consumption

3.6.1 Table T9 shows changes in percentage composition of MPCE<sub>URP</sub> (or in aggregate consumer expenditure) as shown by the 5 quinquennial surveys beginning with 1987-88. The share of food is seen to have declined by about 10 percentage points to 53.6% in the rural sector and by about 16 percentage points to 40.7% in the urban sector over a 22-year period. Since the last quinquennial survey (held 5 years previously), the share of food has fallen by about 1½ percentage points in rural India and nearly 2 percentage points in urban India.

**Table T9: Trends in percentage composition of consumer expenditure since 1987-88**

item group	rural					urban				
	share in total consumer expenditure in									
	1987-88	1993-94	1999-2000*	2004-05	2009-10	1987-88	1993-94	1999-2000*	2004-05	2009-10

\*URP estimates shown except for 1999-2000, for which only MRP estimates are available.

3.6.2 Cereals have registered the largest decline in share among all the item groups – from 26.3% to 15.6% in rural India and from 15% to 9% in urban India. In the urban sector,

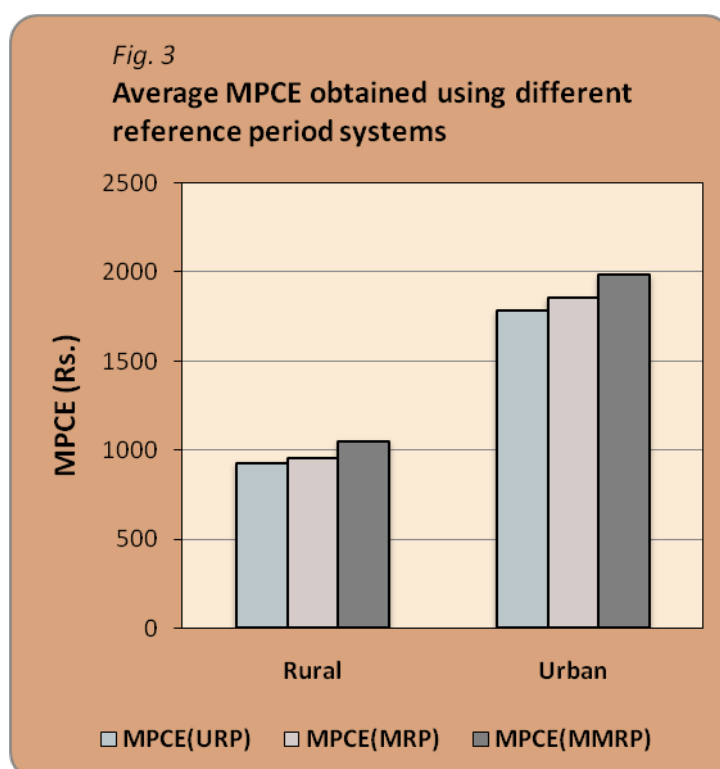

practically all the food groups have suffered a decline in share. For the rural sector, “beverages, etc.” show a distinct rise in share, while pulses, edible oil, sugar, and “salt and spices” show a fall, and for other groups, the evidence is not very conclusive.

3.6.3 Pan, tobacco and intoxicants exhibit a distinct downward trend, especially in urban areas, while fuel and light appear to show an increase in share in the last decade, especially in urban India, clothing and bedding show an overall fall, and the share of durable goods appears to be picking up. The greatest gainer in share of expenditure is clearly the “miscellaneous goods and services” category (including education and medical care). The share of this group has soared (growing by around 70% of its level in 1987-88) from 14.5% to 24% in rural India and from 23.2% to 37.8% in urban India.

3.6.4 The details of consumption by item group of food and non-food are given in Tables 2A, 2B and 2C (pages 93-95) for URP, MRP and MMRP. For MMRP, additionally, *item-level* consumption estimates – both quantity and value of per capita consumption – are given in Tables 3R and 3U (pages 96-103) for each food item appearing in Schedule 1.0 and in Tables 4R and 4U (pages 104-115) for each non-food item.

### 3.7 Comparative picture of URP, MRP and MMRP estimates of MPCE: major States

3.7.1 The three estimates of MPCE for rural and urban sectors of the major States are shown in Table T10 for purposes of comparison. Fig. 3 shows all-India rural and urban MPCE according to the three different reference period systems.

**Table T10: Average MPCE by State and sector using different reference period systems, 2009-10**

# **Appendix A**

## **Concepts and Definitions**

## Concepts and Definitions

**1.1 Household:** A group of person normally living together and taking food from a common kitchen constitutes a household. The word "normally" means that temporary visitors are excluded but temporary stay-aways are included. Thus, a son or daughter residing in a hostel for studies is excluded from the household of his/her parents, but a resident employee or resident domestic servant or paying guest (but not just a tenant in the house) is included in the employer/host's household. "Living together" is usually given more importance than "sharing food from a common kitchen" in drawing the boundaries of a household in case the two criteria are in conflict; however, in the special case of a person taking food with his family but sleeping elsewhere (say, in a shop or a different house) due to space shortage, the household formed by such a person's family members is taken to include that person also. Each inmate of a mess, hotel, boarding and lodging house, hostel, etc., is considered as a single-member household except that a family living in a hotel (say) is considered as one household only; the same applies to residential staff of such establishments. Under-trial prisoners in jails and indoor patients of hospitals, nursing homes, etc., are considered as members of the households to which they last belonged.

**1.2 Household size:** The size of a household is the total number of persons in the household.

**1.3 Uniform Reference Period MPCE (or  $MPCE_{URP}$ ):** This is the measure of MPCE obtained by the NSS consumer expenditure survey (CES) when household consumer expenditure on each item is recorded for a reference period of "last 30 days" (preceding the date of survey).

**1.4 Mixed Reference Period MPCE (or  $MPCE_{MRP}$ )** This is the measure of MPCE obtained by the CES when household consumer expenditure on items of clothing and bedding, footwear, education, institutional medical care, and durable goods is recorded for a reference period of "last 365 days", and expenditure on all other items is recorded with a reference period of "last 30 days".

**1.5 Modified Mixed Reference Period MPCE (or  $MPCE_{MMRP}$ )** This is the measure of MPCE obtained by the CES when household consumer expenditure on edible oil, egg, fish and meat, vegetables, fruits, spices, beverages, refreshments, processed food, pan, tobacco and intoxicants is recorded for a reference period of "last 7 days", and for all other items, the reference periods used are the same as in case of Mixed Reference Period MPCE ( $MPCE_{MRP}$ ).

**1.6 Deciles and decile classes of MPCE:** The first decile of the distribution of MPCE over the population of any region or domain is the level of MPCE below which 10% of the population lie, the second decile, the level below which 20% of the population lie, and so on. Thus the population can be divided into 10 "decile classes of MPCE" as follows: those with MPCE below the 1<sup>st</sup> decile of the MPCE distribution (the bottom 10% of the population ranked by MPCE), from the 1<sup>st</sup> decile to the 2<sup>nd</sup> decile (the next 10%), from the 2<sup>nd</sup> decile to the 3<sup>rd</sup> decile (the next 10%), and so on. Averages of other variables of interest, computed separately for the 10 decile classes, help to portray the variation of such variables with variation in MPCE. In line with usual NSS practice, decile classes of MPCE are formed separately for the rural and the urban sector, both for India as a whole and for the States.

### 1.7 Categories of consumption items (in alphabetical order)

**Beverages, refreshments, etc.:** This stands for “beverages, refreshments and processed food”. It includes tea, coffee, mineral water, soft drinks, fruit juice (not prepared at home), soda water, other beverages such as cocoa, biscuits, cakes, pastries, pickles, sauce, jam, jelly, and other salted refreshments and sweets not prepared at home. Refreshments prepared at home are not included here. Instead, the ingredients of the refreshments (such as flour, sugar, milk, etc.) are accounted under “cereals”, “sugar”, etc. Food purchased in the form of cooked meals is also included in “processed food”.

**Cereals:** Note that household consumption of cereals does not include consumption of cereals by livestock belonging to the household. Such expenditure, being part of farm expenditure, is excluded from household consumer expenditure altogether.

**Cereal substitutes:** Cereals are usually a person's staple food in India. But sometimes, by choice or due to scarcity, a person may consume little or no cereal. The food requirement is partially or wholly met in such cases by consumption of food items which could be treated as substitutes for cereals. Tapioca, for example, is consumed in some parts of the country as a substitute for cereals. Similarly, jackfruit seed, *mahua*, etc. are also consumed as substitute for cereals. Potato or sweet potato consumed as substitutes for cereals are not, however, shown here. These are included in “vegetables”.

**Clothing and bedding:** This category includes bedding (pillows, quilts, mattresses, mosquito nets, etc.), as well as rugs, blankets, curtains, towels, mats, cloth for upholstery, etc. It excludes footwear and raincoats. Expenditure on tailor-made clothing excludes tailoring charges, which are accounted in “consumer services”. Consumption of an article of clothing is considered to take place when it is brought into first use. However, clothing purchased second-hand is considered as consumed as soon as it is purchased. Livery supplied by the employer is taken into account in household consumption of clothing even if used during duty hours only.

**Conveyance:** This includes expenditure incurred on account of journeys undertaken and/or transportation of goods made by any means of conveyance. The expenditure is the actual fare paid except in case of railway season tickets, for which expenditure is calculated as the cost of the ticket divided by the number of months for which it is valid. Expenditure on journeys undertaken by household members as part of official tours is not considered as consumer expenditure of the household. But journeys to commute to and from place of work are included here. The expenditure incurred on journeys undertaken under Leave Travel Concession, etc., even if reimbursed, is included. In case of owned conveyance, the cost of fuel (petrol, mobile oil, diesel, etc.) for power-driven transport and animal feed for animal-drawn carriage is considered.

**Durable goods:** Items included here all have a lifetime of one year or more. However, some petty durables such as spectacles, torches, locks, umbrellas, etc., are excluded. Note that glassware, earthenware and plastic goods such as buckets are excluded from durable goods and included in “other household consumables”. Consumption expenditure on durable goods includes both expenditure on purchase (both first-hand and second-hand) and expenditure on repair and construction of household durables. For land and residential building, only expenditure on repair and construction is included. Durable goods include furniture and fixtures, “entertainment” durables such as radios, TV, VCR/VCP/DVD players, tape

recorders and CD players, cameras, musical instruments, jewellery and ornaments, crockery and utensils, cooking and other household appliances such as fans, air conditioners, air coolers, sewing machines used for household work, washing machines, stoves, pressure cookers, fridges, water purifiers, electric irons, heaters, toasters and ovens, household transport equipment including two-wheelers, four-wheelers and their parts, therapeutic appliances, clocks, watches, computers for household use, mobile phone handsets, and bathroom and sanitary equipment.

**Edible oil:** Edible oils used for toilet purpose by the household are not included here.

**Education:** This includes expenditure on goods purchased for the purpose of education, viz., books and journals (first-hand or second-hand), newspapers, stationery, educational CD, etc, and also magazines, novels and other fiction. It also includes fees paid to educational institutions (e.g., schools, colleges, universities, etc.) on account of tuition and other fees like game fees, library fees, etc., and payment to private tutors. Fees for shorthand and typing courses, fees for music, dancing and swimming lessons, and fees for training in nursing, physiotherapy, etc., are included. Expenditure on Internet other than telephone charges is also included. Occasional payments to the school fund made on account of charities, and “donations” generally, are not included here, unless they are charged by the educational institution as compulsory payments.

**Entertainment:** This includes expenditure on cinemas, theatres, *melas*, fairs and picnics, expenditure incurred on processing, developing, etc., of photographic film, charges paid for hiring of video cassette/VCD/DVD players, and charges for viewing a video show. Expenses incurred on subscription to dish antenna, cable TV facilities, etc. are also included. Club fees are included here.

**Footwear:** This includes charges paid to a cobbler for getting a pair of shoes or other footwear made. It excludes the cost of straps purchased separately.

**Gram:** This includes gram products such as *sattu* obtained by frying and powdering of gram (whole grain). *Besan* made out of gram is, however, not included here, but in “other pulse products”.

**Medical expenses:** This includes expenditure on medicine of different types and on medical goods; also, payments made to doctor, nurse, etc., as professional fees and those made to hospital, nursing home, etc. for medical treatment, and expenditure incurred for clinical tests, including X-rays, ECG, pathological tests, etc. Expenditure on all family planning devices is included.

**Medical: institutional and non-institutional expenditure:** The distinction between institutional and non-institutional medical expenses lies in whether the expenses were incurred on medical treatment as an in-patient of a medical institution (institutional), or otherwise (non-institutional). Medical institution here covers private as well as Government institutions such as hospitals and nursing homes.

**Milk and milk products:** Milk products include ghee, butter, curd, etc. Milk used in home preparation of sweetmeats, etc., is also accounted here. This category also includes those baby foods of which the principal constituent is milk. Further, milk (liquid) includes ice-

cream of which the major component is milk. Ice with syrup but without milk sold under the name of ice-cream is not included in this category.

**Minor durable-type goods:** These include spectacles, torches, locks, umbrellas, raincoats, gas lighters, etc. These are not included in “durable goods” but in “miscellaneous goods and services”.

**Miscellaneous goods and services:** This is a residual category covering all items *other than* food, pan, tobacco, intoxicants, fuel and light, clothing, footwear, and durable goods. It includes, among other things, expenditure on education, medical care, entertainment, conveyance, rent, and consumer taxes and cesses. (Note, however, that in Schedule 1.0, collection, education and institutional medical care are separated out from the “miscellaneous goods and services” block to form a separate block.)

**Other consumer services:** This includes expenditure on domestic servants, cooks, attendants, sweepers, barbers and beauticians, laundry, ironing, tailors, priests, legal services, telephone charges, postal charges, grinding charges, and repair charges for non-durable goods. Apart from conveyance, it excludes the consumer services coming under “entertainment”.

**Other household consumables:** These include electric bulbs, tubelights, batteries, earthenware, glassware, plastic goods such as buckets, water bottles and feeding bottles, coir and rope, washing soap, washing soda, other washing requisites, incense, room fresheners, flowers, acid and insecticides.

**Pan:** This includes, *pan* (betel leaves), *supari*, lime, *katha*, other ingredients of “finished” *pan*, and *pan* purchased in finished form.

**Rent:** Rent includes house and garage rent, residential land rent and other consumer rent.

# **Appendix B**

## **Sample Design and Estimation Procedure**

# Sample Design and Estimation Procedure

## 1. Introduction

1.1 The National Sample Survey (NSS), set up by the Government of India in 1950 to collect socio-economic data employing scientific sampling methods, conducted its sixty-sixth round from 1<sup>st</sup> July 2009 to 30<sup>th</sup> June 2010.

## 2. Outline of survey programme

2.1 **Subject coverage:** The 66<sup>th</sup> round (July 2009-June 2010) of NSS was for the survey on 'Household Consumer Expenditure' and 'Employment and Unemployment' and it was the eighth quinquennial survey in the series, the last one having been conducted in the 61<sup>st</sup> round (2004-2005) of NSS.

2.2 **Geographical coverage:** The survey covered the whole of the Indian Union *except* (i) interior villages of Nagaland situated beyond five kilometres of the bus route and (ii) villages in Andaman and Nicobar Islands which remain inaccessible throughout the year. For Leh (Ladakh) and Kargil districts of Jammu & Kashmir there were no separate sample first-stage units (FSUs) for the 'Central sample'. For these two districts, sample FSUs drawn as 'State sample' were treated as Central sample. However, no first-stage unit was surveyed in Leh, Kargil and Punch districts of J&K due to various reasons.

2.3 **Period of survey and work programme:** The period of survey was of one year duration starting on 1<sup>st</sup> July 2009 and ending on 30<sup>th</sup> June 2010. The survey period of this round was divided into four sub-rounds of three months' duration each as follows:

- sub-round 1 : July - September 2009
- sub-round 2 : October - December 2009
- sub-round 3 : January - March 2010
- sub-round 4 : April - June 2010

In each of these four sub-rounds equal numbers of sample villages/blocks (FSUs) were allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period. Attempts were made to survey each of the FSUs during the sub-round to which it was allotted. *Because of the arduous field conditions, this restriction was not strictly enforced in Andaman and Nicobar Islands, Lakshadweep and rural areas of Arunachal Pradesh and Nagaland.*

2.4 **Schedules of enquiry:** During this round, the following schedules of enquiry were canvassed:

- Schedule 0.0 : list of households
- Schedule 1.0 : consumer expenditure
- Schedule 10 : employment and unemployment

Two variants of Schedule 1.0, called Schedule Type 1 and Schedule Type 2, were canvassed in this round. Schedule Type 1 was similar to Schedule 1.0 of NSS 61<sup>st</sup> round. Compared to

Schedule Type 1, Schedule Type 2 had a different reference period (7 days) for some items of food, pan, tobacco and intoxicants.

**2.5 Participation of States:** In this round all the States and Union Territories except Andaman & Nicobar Islands, Chandigarh, Dadra & Nagar Haveli and Lakshadweep participated. The scale of the survey conducted by a State/UT relative to the Central sample survey in the State/UT was as follows:

Nagaland (Urban)	: triple
J&K, Manipur, Delhi & Uttar Pradesh	: double
Maharashtra (Urban) & Kerala	: one and half
Gujarat	: less than equal
Remaining States/UTs	: equal

### 3. Sample design

**3.1 Outline of sample design:** A stratified multi-stage design was adopted for the 66<sup>th</sup> round survey. The first stage units (FSUs) were the 2001 Census villages (Panchayat wards in case of Kerala) in the rural sector and Urban Frame Survey (UFS) blocks in the urban sector. In addition, two non-UFS towns of Leh and Kargil of Jammu & Kashmir were also treated as FSUs in the urban sector. The ultimate stage units (USU) were households in both the sectors. In case of large FSUs, one intermediate stage of sampling was the selection of two hamlet-groups (hgs)/sub-blocks (sbs) from each rural/urban FSU.

**3.2 Sampling frame for first stage units:** *For the rural sector*, the list of 2001 Census villages (henceforth the term 'village' will mean Panchayat wards for Kerala) constituted the sampling frame. *For the urban sector*, the list of latest available UFS blocks was considered as the sampling frame. For non-UFS towns, the frame consisted of the individual towns (only two towns, viz., Leh & Kargil constituted this frame).

**3.3 Stratification:** Within each district of a State/UT, generally speaking, two basic strata were formed: i) rural stratum comprising all rural areas of the district and (ii) urban stratum comprising all urban areas of the district. However, within the urban areas of a district, wherever there were one or more towns with population 10 lakhs or more as per Census 2001 in a district, each of these formed a separate basic stratum and the remaining urban areas of the district were considered as another basic stratum.

**3.4 Sub-stratification:** Each rural stratum was divided into 2 sub-strata as follows:

sub-stratum 1: all villages with proportion of child workers (p) >2P (where P is the average proportion of child workers for the State/UT as per Census 2001)

sub-stratum 2: remaining villages

**3.5 Total sample size (FSUs):** At all-India level, 12784 FSUs were allocated to the Central sample and 15132 FSUs to the State sample. Further, the data of 24 State sample FSUs of Leh and Kargil districts of J&K surveyed by DES, J&K, were included in the Central sample.

**3.6 Allocation of total sample to States and UTs:** The total number of sample FSUs was allocated to the States and UTs in proportion to population as per Census 2001 subject to a minimum sample allocation to each State/UT, and subject to resource availability in terms of field investigators.

**3.7 Allocation of State/UT level sample to rural and urban sectors:** State/UT level sample size was allocated between the two sectors in proportion to population as per Census 2001 with double weightage to urban sector, subject to the restriction that the urban sample size for bigger States like Maharashtra, Tamil Nadu, etc. should not exceed the rural sample size. A minimum of 16 FSUs (to the extent possible) was allocated to each State/UT separately for rural and urban areas. Further, the State-level allocations for both rural and urban sectors were adjusted marginally in a few cases to ensure that each stratum/sub-stratum got a minimum allocation of 4 FSUs.

**3.8 Allocation to strata/sub-strata:** Within each sector of a State/UT, the sample size was allocated to different strata/sub-strata in proportion to population as per Census 2001. Allocations at stratum/sub-stratum level were adjusted to multiples of 4 with a minimum sample size of 4 and equal-sized samples were allocated to the four sub-rounds.

**3.9 Selection of FSUs:** For the rural sector, from each stratum/sub-stratum, the required numbers of sample villages were selected by probability proportional to size with replacement (PPSWR), size being the population of the village as per Census 2001. For the urban sector, FSUs were selected from each stratum using Simple Random Sampling Without Replacement (SRSWOR). Both rural and urban samples were drawn in the form of two independent sub-samples.

### 3.10 Formation and selection of hamlet-groups/sub-blocks

**3.10.1 Criterion for hamlet-group/sub-block formation:** Selected FSUs with approximate population 1200 or more were divided into a suitable number of geographically compact 'hamlet-groups' (having more or less equal population) in the rural sector and 'sub-blocks' in the urban sector as shown below.

approximate present population of the sample FSU	no. of hg's/sb's formed
less than 1200 (no hg/sb formation)	1
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
3000 to 3599	6
... and so on	

For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except for four districts –Dehradun (Plains), Nainital (Plains), Hardwar and Udham Singh Nagar), Poonch, Rajouri, Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu and Kashmir, and Idukki district of Kerala, the number of hamlet-groups formed was as follows:

approximate present population of the sample village	no. of hg's formed
less than 600 (no hg formation)	1
600 to 899	3
900 to 1199	4
1200 to 1499	5
... and so on	

**3.10.2 Selection of hamlet-groups/sub-blocks:** Hamlet-groups (hg)/sub-blocks (sb) were selected from FSUs where hamlet-groups/sub-blocks were formed, two in the following manner. The hg/sb with maximum percentage share of population was always selected and termed hg/sb 1; one more hg/sb was selected from the remaining hg's/sb's by simple random sampling (SRS) and termed hg/sb 2. Listing and selection of the households was done independently in the two selected hamlet-groups/sub-blocks.

#### 4. Listing of households

4.1 Having determined the hamlet-groups/sub-blocks, i.e. area(s) to be considered for listing, the next step was to list all the households (including those found through local enquires to be temporarily locked). The hamlet-group/sub-block with sample hg/sb number 1 was considered for listing first, followed by sample hg/sb number 2.

#### 5. Formation of second stage strata and allocation of sample households

5.1 Two cut-off points 'A' and 'B' (in Rs.) were determined from NSS 61<sup>st</sup> round data for each NSS region for urban areas in such a way that the top 10% of the population had MPCE more than B and the bottom 30% of the population had MPCE less than A.

5.2: For Schedule 1.0, households listed in the selected FSU/hamlet-group/sub-block were stratified into three second stage strata (SSS). Composition of the SSS and number of households to be surveyed from different SSSs for each of the two schedule types was as follows:

SSS	composition of SSS	number of households surveyed	
		FSU without hg/sb formation	FSU with hg/sb formation (for each hg/sb)
<b>Rural</b>			
SSS 1	relatively affluent households	2	1
SSS 2	of the remaining, households having principal earning from non- agricultural activity	4	2
SSS 3	other households	2	1
<b>Urban</b>			
SSS 1	households having MPCE of top 10% of urban population (MPCE > B)	2	1
SSS 2	households having MPCE of middle 60% of urban population (A ≤ MPCE ≤ B)	4	2
SSS 3	households having MPCE of bottom 30% of urban population (MPCE < A)	2	1

5.3 Thus, for each schedule type, a total of 8 households were selected for survey from each FSU – 4 from each selected hamlet-group/sub-block in FSUs where hg/sb's were formed.

## 6. Selection of households

6.1 From each SSS the sample households for each of the schedules were selected by SRSWOR. If a household was selected for Schedule 1.0 (Type 1), it was not allowed to be selected for Schedule 1.0 (Type 2) or Schedule 10. Similarly, if a household was not selected for Schedule 1.0 (Type 1) but selected for Schedule 1.0 (Type 2) it was not allowed to be selected for Schedule 10. If a household got selected for more than one schedule, only one schedule was canvassed in that household in the priority order of Schedule 1.0 (Type 1), Schedule 1.0 (Type 2) and Schedule 10 and in that case the household was replaced by selecting another household for the other schedule.

6.2 However, at least one household was to be surveyed from each SSS for each of the three schedules of enquiry. To adhere to this restriction, the condition of not canvassing more than one schedule in the same household was waived in the extreme cases where there was an insufficient number of households in the frame of a particular second stage stratum.

## 7. Estimation procedure

### 7.1 Notations:

$s$  = subscript for stratum

$t$  = subscript for sub-stratum (only for rural sector)

$m$  = subscript for sub-sample ( $m = 1, 2$ )

$i$  = subscript for FSU [village (panchayat ward)/ block/ non-UFS town]

$d$  = subscript for a hamlet-group/sub-block ( $d = 1, 2$ )

$j$  = subscript for second stage stratum in an FSU/ hg/sb [ $j = 1, 2$  or  $3$ ]

$k$  = subscript for sample household under a particular second stage stratum within an FSU/ hg/sb

$D$  = total number of hg's/sb's formed in the sample FSU

$D^* = 0$  if  $D = 1$

$= (D - 1)$  for FSUs with  $D > 1$

$N$  = total number of FSUs in any urban stratum

$Z$  = total size of a rural stratum/sub-stratum (= sum of sizes for all the FSUs of a stratum/sub-stratum)

$z$  = size of sample village used for selection.

$n$  = number of sample FSUs surveyed including 'zero cases' but excluding casualties for a particular sub-sample and stratum/sub-stratum.

$H$  = total number of households listed in a second-stage stratum of an FSU/ hamlet-group or sub-block of sample FSU

$h$  = number of households surveyed in a second-stage stratum of an FSU/ hamlet-group or sub-block of sample FSU

$x, y$  = observed value of characteristics  $x, y$  under estimation

$\hat{X}, \hat{Y}$  = estimate of population total  $X, Y$  for the characteristics  $x, y$

In terms of the above symbols,

$y_{stmidjk}$  = observed value of the characteristic  $y$  for the  $k^{\text{th}}$  household in the  $j^{\text{th}}$  second stage stratum of the  $d^{\text{th}}$  hg/sb ( $d = 1, 2$ ) of the  $i^{\text{th}}$  FSU belonging to the  $m^{\text{th}}$  sub-sample for the  $t^{\text{th}}$  sub-stratum of  $s^{\text{th}}$  stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

## 7.2 Formulae for estimation of aggregates for a particular sub-sample and stratum (for urban)/ sub-stratum (for rural)

### 7.2.1 Rural

(i) For  $j^{\text{th}}$  second stage stratum of a sub-stratum:

$$\hat{Y}_j = \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

(iii) Estimate for a stratum ( $\hat{Y}_s$ ) will be obtained by adding sub-stratum level estimates ( $\hat{Y}_{st}$ ).

### 7.2.2 Urban

(i) For  $j^{\text{th}}$  second stage stratum of a stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \times \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right]$$

(ii) For all second-stage strata combined:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Note:  $N = 1$  in the above formula in the case of Leh and Kargil districts of J&K.

## 7.3 Overall estimate for aggregates

Overall estimate for aggregates for a stratum ( $\hat{Y}_s$ ) based on two sub-samples was obtained as:

$$\hat{Y}_s = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{sm}$$

#### 7.4 Overall estimate of aggregates at State/UT/all-India level

The overall estimate  $\hat{Y}$  at the State/UT/all-India level was obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State/UT/all-India.

#### 7.5 Estimates of ratios

Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimates of the aggregates Y and X for two characteristics y and x respectively at the State/UT/all-India level.

Then the combined ratio estimate ( $\hat{R}$ ) of the ratio ( $R = \frac{Y}{X}$ ) was obtained as  $\hat{R} = \frac{\hat{Y}}{\hat{X}}$ .

#### 7.6 Estimates of error

The estimated variances of the above estimates were as follows:

##### 7.6.1 For aggregate $\hat{Y}$

$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s)$  where  $V\hat{a}r(\hat{Y}_s)$  is given by

$V\hat{a}r(\hat{Y}_s) = \sum_t \frac{1}{4} (\hat{Y}_{st1} - \hat{Y}_{st2})^2$  for rural stratum, where  $\hat{Y}_{st1}$  and  $\hat{Y}_{st2}$  are the estimates for sub-sample 1 and sub-sample 2 respectively for stratum 's' and sub-stratum 't',

and

$V\hat{a}r(\hat{Y}_s) = \frac{1}{4} (\hat{Y}_{s1} - \hat{Y}_{s2})^2$  for urban stratum,  $\hat{Y}_{s1}$  and  $\hat{Y}_{s2}$  being the stratum estimates for sub-sample 1 and 2 respectively.

##### 7.6.2 For ratio $\hat{R}$ :

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \sum_t \left[ (\hat{Y}_{st1} - \hat{Y}_{st2})^2 + \hat{R}^2 (\hat{X}_{st1} - \hat{X}_{st2})^2 - 2\hat{R}(\hat{Y}_{st1} - \hat{Y}_{st2})(\hat{X}_{st1} - \hat{X}_{st2}) \right]$$

for rural and

$$M\hat{S}E(\hat{R}) = \frac{1}{4\hat{X}^2} \sum_s \left[ (\hat{Y}_{s1} - \hat{Y}_{s2})^2 + \hat{R}^2 (\hat{X}_{s1} - \hat{X}_{s2})^2 - 2\hat{R}(\hat{Y}_{s1} - \hat{Y}_{s2})(\hat{X}_{s1} - \hat{X}_{s2}) \right]$$

for urban.

## 7.6.3 Estimates of Relative Standard Error (RSE):

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{\text{Var}(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

## 8. Multipliers:

The formulae for multipliers at stratum/sub-stratum/second-stage stratum level for a sub-sample and schedule type are given below for Schedule 1.0:

sector	formula for multipliers	
	hg /sb 1	hg /sb 2
rural	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times \frac{H_{stmi1j}}{h_{stmi1j}}$	$\frac{Z_{st}}{n_{stmj}} \times \frac{1}{z_{stmi}} \times D_{stmi}^* \times \frac{H_{stmi2j}}{h_{stmi2j}}$
Urban	$\frac{N_s}{n_{smj}} \times \frac{H_{smi1j}}{h_{smi1j}}$ ,	$\frac{N_s}{n_{smj}} \times D_{smi}^* \times \frac{H_{smi2j}}{h_{smi2j}}$ ,

(j = 1, 2, 3)

- Note: (i) For estimating any characteristic for any domain not specifically considered in the sample design, indicator variable was used.
- (ii) Multipliers were computed on the basis of information available in the listing schedule irrespective of any misclassification observed between listing schedule and detailed enquiry schedule.
- (iii) For estimating number of villages possessing a characteristic,  $D_{smi}^* = 0$  in the relevant multipliers and there was only one multiplier for the village (see paragraph 7.2.1.1).

# Appendix C

## Population Projections

Table C1: Projected population (000) as on 1<sup>st</sup> March 2009, 1<sup>st</sup> March 2010 and 1<sup>st</sup> January 2009 for each State/U.T

State/U.T/all-India	rural			urban			rural+ urban		
	1st Mar 2009	1st Mar 2010	1st Jan 2010	1st Mar 2009	1st Mar 2010	1st Jan 2010	1st Mar 2009	1st Mar 2010	1st Jan 2010

Note: 1. Projected population as on 1<sup>st</sup> March 2009 and 1<sup>st</sup> March 2010 are from RGI (reference Tables 8 and 9 of the Population Projections for India and States: 2001-2026).

2. Table 8 provides projected population as on 1<sup>st</sup> March 2009 and 1<sup>st</sup> March 2010 for rural+urban combined and Table 9 provides projected population as on 1<sup>st</sup> March 2009 and 1<sup>st</sup> March 2010 for urban.

3. Projected population as on 1<sup>st</sup> January 2010 has been derived using the formula,  $A = A_1 \times \left[ \left( A_2 / A_1 \right)^{\frac{1}{12}} \right]^{10}$ , where  $A_1$  is the population for 1<sup>st</sup> March 2009,  $A_2$  is the population for 1<sup>st</sup> March 2010 and  $A$  is the population for 1<sup>st</sup> January 2010.

4. Projected population as on 1<sup>st</sup> January 2010 has been derived for the rural+urban and urban separately and that for rural has been derived by subtracting these two.
