

NATIONAL FAMILY HEALTH SURVEY - 5

2019-20

UNION TERRITORY FACT SHEET DADRA & NAGAR HAVELI AND DAMAN & DIU

Introduction

The National Family Health Survey 2019-20 (NFHS-5), the fifth in the NFHS series, provides information on population, health, and nutrition for India and each state/union territory (UT). Like NFHS-4, NFHS-5 also provides district-level estimates for many important indicators.

The contents of NFHS-5 are similar to NFHS-4 to allow comparisons over time. However, NFHS-5 includes some new topics, such as preschool education, disability, access to a toilet facility, death registration, bathing practices during menstruation, and methods and reasons for abortion. The scope of clinical, anthropometric, and biochemical testing (CAB) has also been expanded to include measurement of waist and hip circumferences, and the age range for the measurement of blood pressure and blood glucose has been expanded. However, HIV testing has been dropped. The NFHS-5 sample has been designed to provide national, state/union territory (UT), and district level estimates of various indicators covered in the survey. However, estimates of indicators of sexual behaviour; husband's background and woman's work; HIV/AIDS knowledge, attitudes and behaviour; and domestic violence are available only at the state/union territory (UT) and national level.

As in the earlier rounds, the Ministry of Health and Family Welfare, Government of India, designated the International Institute for Population Sciences, Mumbai, as the nodal agency to conduct NFHS-5. The main objective of each successive round of the NFHS has been to provide high-quality data on health and family welfare and emerging issues in this area. NFHS-5 data will be useful in setting benchmarks and examining the progress the health sector has made over time. Besides providing evidence for the effectiveness of ongoing programmes, the data from NFHS-5 help in identifying the need for new programmes with an area specific focus and identifying groups that are most in need of essential services.

Four Survey Schedules - Household, Woman's, Man's, and Biomarker - were canvassed in local languages using Computer Assisted Personal Interviewing (CAPI). In the Household Schedule, information was collected on all usual members of the household and visitors who stayed in the household the previous night, as well as socio-economic characteristics of the household; water, sanitation, and hygiene; health insurance coverage; disabilities; land ownership; number of deaths in the household in the three years preceding the survey; and the ownership and use of mosquito nets. The Woman's Schedule covered a wide variety of topics, including the woman's characteristics, marriage, fertility, contraception, children's immunizations and healthcare, nutrition, reproductive health, sexual behaviour, HIV/AIDS, women's empowerment, and domestic violence. The Man's Schedule covered the man's characteristics, marriage, his number of children, contraception, fertility preferences, nutrition, sexual behaviour, health issues, attitudes towards gender roles, and HIV/AIDS. The Biomarker Schedule covered measurements of height, weight, and haemoglobin levels for children; measurements of height, weight, waist and hip circumference, and haemoglobin levels for women age 15-49 years and men age 15-54 years; and blood pressure and random blood glucose levels for women and men age 15 years and over. In addition, women and men were requested to provide a few additional drops of blood from a finger prick for laboratory testing for HbA1c, malaria parasites, and Vitamin D3.

Readers should be cautious while interpreting and comparing the trends as some States/UTs may have smaller sample size. Moreover, at the time of survey, Ayushman Bharat AB-PMJAY and Pradhan Mantri Surakshit Matritva Abhiyan (PMSMA) were not fully rolled out and hence, their coverage may not have been factored in the results of indicator 12 (percentage of households with any usual member covered under a health insurance/financing scheme) and indicator 41 (percentage of mothers who received 4 or more antenatal care check-ups).

This fact sheet provides information on key indicators and trends for Dadra & Nagar Haveli and Daman & Diu. NFHS-5 fieldwork for Dadra & Nagar Haveli and Daman & Diu was conducted from 27 July, 2019 to 30 November, 2019 by Centre for Operations Research and Training (CORT). Information was gathered from 2,676 households, 2,713 women, and 427 men. Fact sheets for each district in Dadra & Nagar Haveli and Daman & Diu are also available separately.

		NFHS-5		NFHS-4
Indicators		(2019-20)		(2015-16)
Population and Household Profile	Urban	Rural	Total	Total
1. Female population age 6 years and above who ever attended school (%)	85.8	65.0	74.4	73.0
2. Population below age 15 years (%)	24.4	26.4	25.4	26.5
3. Sex ratio of the total population (females per 1,000 males)	775	875	827	813
4. Sex ratio at birth for children born in the last five years (females per 1,000 males)	705	940	817	983
5. Children under age 5 years whose birth was registered with the civil authority (%)	96.6	99.5	98.1	93.0
6. Deaths in the last 3 years registered with the civil authority (%)	91.5	99.6	95.4	na
7. Population living in households with electricity (%)	99.9	99.5	99.7	98.3
8. Population living in households with an improved drinking-water source ¹ (%)	97.9	93.2	95.4	94.8
9. Population living in households that use an improved sanitation facility ² (%)	68.5	63.3	65.8	44.4
10. Households using clean fuel for cooking ³ (%)	95.2	62.6	79.9	63.1
11. Households using iodized salt (%)	98.1	78.4	89.1	80.8
12. Households with any usual member covered under a health insurance/financing scheme (%)	39.5	66.3	52.0	25.3
13. Children age 5 years who attended pre-primary school during the school year 2019-20 (%)	6.2	1.3	3.7	na
Characteristics of Adults (age 15-49 years)				
14. Women who are literate ⁴ (%)	87.7	67.9	77.3	na
15. Men who are literate ⁴ (%)	95.4	91.6	93.4	na
16. Women with 10 or more years of schooling (%)	48.6	24.2	35.8	40.3
17. Men with 10 or more years of schooling (%)	58.8	40.7	49.4	52.6
18. Women who have ever used the internet (%)	49.4	23.8	36.7	na
19. Men who have ever used the internet (%)	76.2	61.3	68.3	na
Marriage and Fertility				
20. Women age 20-24 years married before age 18 years (%)	26.7	26.2	26.4	26.8
21. Men age 25-29 years married before age 21 years (%)	(20.6)	(7.4)	12.6	29.9
22. Total fertility rate (children per woman)	1.7	1.9	1.8	2.1
23. Women age 15-19 years who were already mothers or pregnant at the time of the survey (%)	1.9	5.8	4.3	8.5
24. Adolescent fertility rate for women age 15-19 years ⁵	32	45	40	54
Infant and Child Mortality Rates (per 1,000 live births)				
25. Neonatal mortality rate (NNMR)	(20.3)	(22.5)	21.4	13.9
26. Infant mortality rate (IMR)	(33.3)	(30.4)	31.8	33.4
27. Under-five mortality rate (U5MR)	(43.8)	(30.4)	37.0	39.9
Current Use of Family Planning Methods (currently married women age 15-49 years)				
28. Any method ⁶ (%)	63.5	72.4	68.0	36.2
29. Any modern method ⁶ (%)	53.6	66.0	59.8	35.8
30. Female sterilization (%)	30.9	52.4	41.6	29.7
31. Male sterilization (%)	0.0	0.3	0.2	0.0
32. IUD/PPIUD (%)	3.0	1.5	2.2	1.7
33. Pill (%)	3.5	2.8	3.1	1.2
34. Condom (%)	15.6	7.8	11.7	3.2
35. Injectables (%)	0.7	1.1	0.9	0.0
Unmet Need for Family Planning (currently married women age 15–49 years)				
36. Total unmet need ⁷ (%)	15.4	8.5	11.9	19.5
37. Unmet need for spacing ⁷ (%)	7.4	3.2	5.3	10.7
Quality of Family Planning Services				
38. Health worker ever talked to female non-users about family planning (%)	27.6	23.2	25.3	15.5
39. Current users ever told about side effects of current method ⁸ (%)	66.9	72.2	69.9	43.4
Note: Major indicators are highlighted in grov	50.0		55.5	10.1

Note: Major indicators are highlighted in grey.

LHV = Lady health visitor; ANM = Auxiliary nurse midwife; na = Not available

For all indicators other than 26, 27, 28: () Based on 25-49 unweighted cases

For indicators 26, 27 and 28: () Based on 250-499 unweighted person-years of exposure to the risk of death

³Electricity, LPG/natural gas, biogas. ⁴Refers to women/men who completed standard 9 or higher and women/men who can read a whole sentence or part of a sentence.

- At risk of becoming pregnant, not using contraception, and either do not want to become pregnant within the next two years, or are unsure if or when they want to become pregnant.
- · Pregnant with a mistimed pregnancy.
- Postpartum amenorrhoeic for up to two years following a mistimed birth and not using contraception.
 Women are considered to have unmet need for limiting if they are:

- · At risk of becoming pregnant, not using contraception, and want no (more) children.
- Pregnant with an unwanted pregnancy.
- Postpartum amenorrhoeic for up to two years following an unwanted birth and not using contraception.

Women who are classified as infecund have no unmet need because they are not at risk of becoming pregnant. Unmet need for family planning is the sum of unmet need for spacing plus unmet need for limiting.

^{*} Percentage not shown; based on fewer than 25 unweighted cases

¹Piped water into dwelling/yard/plot, piped to neighbour, public tap/standpipe, tube well or borehole, protected dug well, protected spring, rainwater, tanker truck, cart with small tank, bottled water, community RO plant.

²Flush to piped sewer system, flush to septic tank, flush to pit latrine, flush to don't know where, ventilated improved pit (VIP)/biogas latrine, pit latrine with slab, twin pit/composting toilet, which is not shared with any other household. This indicator does not denote access to toilet facility.

⁵Equivalent to the age-specific fertility rate for the 3-year period preceding the survey, expressed in terms of births per 1,000 women age 15-19. ⁶Any method includes other methods that are not shown separately; Any modern method includes other modern methods that are not shown separately.

⁷Unmet need for family planning refers to fecund women who are not using contraception but who wish to postpone the next birth (spacing) or stop childbearing altogether (limiting). Specifically, women are considered to have unmet need for spacing if they are:

⁸Based on current users of female sterilization, IUD/PPIUD, injectables, and pills who started using that method in the past 5 years.

²⁴Comprehensive knowledge means knowing that consistent use of condoms every time they have sex and having just one uninfected faithful sex partner can reduce the chance of getting HIV/AIDS, knowing that a healthy-looking person can have HIV/AIDS, and rejecting two common misconceptions about transmission or prevention of

HIV/AIDS.

25 Decisions about health care for herself, making major household purchases, and visits to her family or relatives.

26 Locally prepared napkins, sanitary napkins, tampons, and menstrual cups are considered to be hygienic methods of protection. ²⁷Spousal violence is defined as physical and/or sexual violence.

INTERNATIONAL INSTITUTE FOR POPULATION SCIENCES

Vision: "To position IIPS as a premier teaching and research institution in population sciences responsive to emerging

national and global needs based on values of inclusion, sensitivity and rights protection."

Mission: "The Institute will strive to be a centre of excellence on population, health and development issues through high

quality education, teaching and research. This will be achieved by (a) creating competent professionals, (b) generating and disseminating scientific knowledge and evidence, (c) collaboration and exchange of knowledge, and

(d) advocacy and awareness."
