## Foreword

The experience of countries that succeeded in reducing poverty significantly indicates the importance of high rates of economic growth in achieving this. High growth, however, is not a sufficient condition for poverty reduction; the pattern and sources of growth as well as the manner in which its benefits are distributed are equally important from the point of view of achieving the goal of poverty reduction. In this context, employment plays a key role in all developing countries. Indeed, countries which attained high rates of employment growth alongside high rates of economic growth are also the ones who succeeded in reducing poverty significantly.

Labour Bureau has been entrusted with the task of conducting Annual Employment-Unemployment Survey in the country. The first survey was conducted in 28 States/UTs by covering 300 districts in the country during the year 2010. The second, third and Fourth Annual Employment-Unemployment Surveys were more comprehensive in terms of coverage as well as parameters estimated. These surveys were conducted in all the States/UTs by covering all the districts in the country.

Field work for Fifth Annual Employment-Unemployment Survey has been conducted during the period April, 2015 to December, 2015 in all the 36 States/UTs by covering all the districts in the country. A moving reference period of last twelve completed months from the date of survey is used to derive various estimates of labour force and its derivatives.

Considering the importance of the labour force parameters and demands from different various quarters, the Fifth Annual Employment-Unemployment Survey report 2015-16 are being brought out in **Four Volumes**.

Volume-I titled "Employment-Unemployment Scenario 2015-16" deals with important parameters namely Labour Force Participation Rate, Worker Population Ratio, Unemployment Rate based on Usual Principal Status Approach and Usual Principal & Subsidiary Status Approach,

distribution of employed persons by different activity, extent of underemployment etc.

Volume-II titled "Youth Employment-Unemployment Scenario 2015-16" deals with Labour Force Participation Rate, Worker Population Ratio, Unemployment Rate etc. for different age groups viz. 15-17 years, 18-29 years and 30 Years & above.

Volume-III titled "Education, Skill and Labour Force 2015-16" deals with vocational training and main activity pursued, educational level and main activity, type of formal and non-formal training attained etc.

Volume-IV titled "Employment-Unemployment Scenario among different Social Groups 2015-16" deals with the labour force related parameters and its derivatives for various social groups.

In addition considering the demand of district level estimates for decentralized planning, Bureau has worked with five States/UTs namely Maharashtra, Telangana, J & K, Andhra Pradesh and Puducherry. These States/UTs have covered matching samples along with Labour Bureau main survey. After pooling the samples, the district level estimates for these States/UTs are also a part of Fifth Annual Employment-Unemployment Survey 201-15.

There have been many hurdles in completing the survey on time. Despite all such hurdles, the survey was successfully completed mainly because of the hard work put in by the dedicated staff and officers of the Labour Bureau. Without such support and co-operation from the State Governments it could have been very difficult to undertake such survey.

I would like to express my deep appreciation for the constant support received from the State Governments, especially their Directorates of Economics & Statistics (DES), despite the acute shortage of staff and officers, faced by them. My thanks are also due to the National Sample Survey Office (Field Operation Division) for timely making available the Urban Frame Survey maps of the sample urban blocks for use in the survey.

The Expert Committee set up under the able Chairmanship of Prof. S. P. Mukherjee meticulously designed the sample design, schedules and instruction manuals and deliberated at length on the findings of the survey at various stages. This report is the product of the efforts put in by the Committee members, in general and Prof. S. P. Mukherjee in particular. Without his constant guidance and enthusiasm the survey would not have progressed at such a pace. I have no hesitation in admitting that the errors or inadequacies in the Report are however entirely due to the limitations of the Labour Bureau. Last but not the least, Labour Bureau is grateful to the Ministry of Labour and Employment for reposing its faith in the Labour Bureau to conduct such a massive exercise at All-India level.

## REPORT ON FIFTH ANNUAL EMPLOYMENT - UNEMPLOYMENT SCENARIO

### VOLUME I

#### FOREWORD

<b>EXECUTIVE SUMMARY</b>		I-VIII
<b>CHAPTER-I</b>	INTRODUCTION	1-10
<b>CHAPTER-II</b>	HOUSEHOLD CHARACTERISTICS	11-25
<b>CHAPTER-III</b>	LABOUR FORCE ESTIMATES	26-52
<b>ANNEXURE I</b>	CONCEPTS AND DEFINITIONS	1-8
<b>ANNEXURE II</b>	SAMPLING DESIGN & ESTIMATION PROCEDURE	9-16
<b>ANNEXURE III</b>	PROJECTED POPULATION	17-18
<b>ANNEXURE IV</b>	TABLES (1 TO 43)	1-273
<b>ANNEXURE V</b>	CONSTITUTION OF EXPERT GROUP	I-II

<b>LIST OF TABLES</b>		
TABLE (1)	NUMBER OF VILLAGES/UFS BLOCKS ALLOCATED AND ACTUALLY SURVEYED FOR EACH STATE/UT	1
TABLE (2)	NUMBER OF HOUSEHOLDS AND PERSONS SURVEYED FOR EACH STATE/UT	2
TABLE (3)	PER 1000 DISTRIBUTION OF HOUSEHOLDS (HHS) BY MEMBERS AGED 15 YEARS & ABOVE	3-5
TABLE (4)	PER 1000 DISTRIBUTION OF HOUSEHOLDS (HHS) BY SOCIAL GROUP FOR EACH STATE/UT	6-8
TABLE (5)	PER 1000 DISTRIBUTION OF HOUSEHOLDS (HHS) BENEFITED FROM EMPLOYMENT GENERATING SCHEMES FOR EACH STATE/UT	9-13
TABLE (6)	PER 1000 DISTRIBUTION OF HOUSEHOLDS (HHS) BY NUMBER OF EMPLOYED PERSONS AGED 15 YEARS & ABOVE FOR EACH STATE/UT	14-16
TABLE (7)	PER 1000 DISTRIBUTION OF HOUSEHOLDS (HHS) BY NUMBER OF WAGE/SALARIED PERSONS AGED 15 YEARS & ABOVE FOR EACH STATE/UT	17-19
TABLE (8)	PER 1000 DISTRIBUTION OF HOUSEHOLDS (HHS) BY AVERAGE MONTHLY EARNINGS FOR EACH STATE/UT	20-22
TABLE (9)	PER 1000 DISTRIBUTION OF HOUSEHOLDS (HHS) HAVING SAVING BANK ACCOUNT BY AVERAGE MONTHLY EARNINGS FOR EACH STATE/UT	23-25
TABLE (10)	PER 1000 DISTRIBUTION OF HOUSEHOLDS (HHS) BY HOUSEHOLDS HAVING NO EARNER BASED ON USUAL PRINCIPAL STATUS (PS) APPROACH AND THEIR AVERAGE MONTHLY EARNINGS FOR EACH STATE/UT	26
TABLE (10.1)	PER 1000 DISTRIBUTION OF HOUSEHOLDS (HHS) BY HOUSEHOLDS HAVING ONE EARNER BASED ON USUAL PRINCIPAL STATUS (PS) APPROACH AND THEIR AVERAGE MONTHLY EARNINGS FOR EACH STATE/UT	27
TABLE (10.2)	PER 1000 DISTRIBUTION OF HOUSEHOLDS (HHS) BY HOUSEHOLDS HAVING TWO EARNERS BASED ON USUAL PRINCIPAL STATUS (PS) APPROACH AND THEIR AVERAGE MONTHLY EARNINGS FOR EACH STATE/UT	28
TABLE (10.3)	PER 1000 DISTRIBUTION OF HOUSEHOLDS (HHS) BY HOUSEHOLDS HAVING THREE EARNERS BASED ON USUAL PRINCIPAL STATUS (PS) APPROACH AND THEIR AVERAGE MONTHLY EARNINGS FOR EACH STATE/UT	29
TABLE (10.4)	PER 1000 DISTRIBUTION OF HOUSEHOLDS (HHS) BY HOUSEHOLDS HAVING FOUR & ABOVE EARNERS BASED ON USUAL PRINCIPAL STATUS (PS) APPROACH AND THEIR AVERAGE MONTHLY EARNINGS FOR EACH STATE/UT	30
TABLE (11)	PER 1000 DISTRIBUTION OF HOUSEHOLDS (HHS) BY HOUSEHOLDS HAVING WAGE/SALARIED PERSONS BASED ON USUAL PRINCIPAL STATUS (PS) APPROACH AND THEIR AVERAGE MONTHLY EARNINGS FOR EACH STATE/UT	31-33
TABLE (12)	LABOUR FORCE PARTICIPATION RATE (PER 1000) FOR PERSONS AGED 15 YEARS & ABOVE ACCORDING TO USUAL PRINCIPAL STATUS APPROACH (PS) FOR EACH STATE/UT	34
TABLE (13)	WORKER POPULATION RATIO (PER 1000) FOR PERSONS AGED 15 YEARS & ABOVE ACCORDING TO USUAL PRINCIPAL STATUS APPROACH (PS) FOR EACH STATE/UT	35
TABLE (14)	UNEMPLOYMENT RATE (PER 1000) FOR PERSONS AGED 15 YEARS & ABOVE ACCORDING TO USUAL PRINCIPAL STATUS APPROACH (PS) FOR EACH STATE/UT	36
TABLE (15)	PROPORTION UNEMPLOYED (PER 1000) FOR PERSONS AGED 15 YEARS & ABOVE ACCORDING TO USUAL PRINCIPAL STATUS APPROACH (PS) FOR EACH STATE/UT	37
TABLE (16)	LABOUR FORCE PARTICIPATION RATE (PER 1000) FOR PERSONS AGED 15 YEARS & ABOVE ACCORDING TO USUAL PRINCIPAL & SUBSIDIARY STATUS APPROACH (PS+SS) FOR EACH STATE/UT	38

TABLE (17)	WORKER POPULATION RATIO (PER 1000) FOR PERSONS AGED 15 YEARS & ABOVE ACCORDING TO USUAL PRINCIPAL & SUBSIDIARY STATUS APPROACH (PS+SS) FOR EACH STATE/UT	39
TABLE (18)	UNEMPLOYMENT RATE (PER 1000) FOR PERSONS AGED 15 YEARS & ABOVE ACCORDING TO USUAL PRINCIPAL & SUBSIDIARY STATUS APPROACH (PS+SS) FOR EACH STATE/UT	40
TABLE (19)	PROPORTION UNEMPLOYED (PER 1000) FOR PERSONS AGED 15 YEARS & ABOVE ACCORDING TO USUAL PRINCIPAL & SUBSIDIARY STATUS APPROACH (PS+SS) FOR EACH STATE/UT	41
TABLE (20)	PER 1000 DISTRIBUTION OF WORKERS AGED 15 YEARS & ABOVE BY BROAD ACTIVITY ACCORDING TO USUAL PRINCIPAL STATUS APPROACH (PS) FOR EACH STATE/UT	42-53
TABLE (21)	PER 1000 DISTRIBUTION OF WORKERS AGED 15 YEARS & ABOVE BY BROAD ACTIVITY ACCORDING TO USUAL PRINCIPAL & SUBSIDIARY STATUS APPROACH (PS+SS) FOR EACH STATE/UT	54-65
TABLE (22)	PER 1000 DISTRIBUTION OF WORKERS AGED 15 YEARS & ABOVE BY INDUSTRY DIVISION NIC 2008 ACCORDING TO UPS APPROACH AT ALL INDIA LEVEL	66-77
TABLE (23)	PER 1000 DISTRIBUTION OF WORKERS AGED 15 YEARS & ABOVE BY INDUSTRY SECTION BASED ON NIC 2008 ACCORDING TO UPSS FOR EACH STATE/UT	78-89
TABLE (24)	PER 1000 DISTRIBUTION OF WORKERS AGED 15 YEARS & ABOVE BY OCCUPATION DIVISIONS BASED ON NCO 2004 ACCORDING TO USUAL PRINCIPAL STATUS APPROACH (PS) FOR EACH STATE/UT	90-101
TABLE (25)	PER 1000 DISTRIBUTION OF WORKERS AGED 15 YEARS & ABOVE BY OCCUPATION DIVISIONS BASED ON NCO 2004 ACCORDING TO USUAL PRINCIPAL & SUBSIDIARY STATUS APPROACH (PS+SS) FOR EACH STATE/UT	102-113
TABLE (26)	PERCENTAGE DISTRIBUTION OF WORKERS AGED 15 YEARS & ABOVE AVAILABLE FOR 12 MONTHS BUT ACTUALLY WORKED ACCORDING TO USUAL PRINCIPAL & SUBSIDIARY STATUS APPROACH (PS+SS) FOR EACH STATE/UT	114-137
TABLE (27)	DISTRIBUTION OF WORKERS AGED 15 YEARS & ABOVE BY NUMBER OF MONTHS AVAILABLE AND AVERAGE NUMBER OF MONTHS ACTUALLY WORKED ACCORDING TO USUAL PRINCIPAL STATUS APPROACH (PS) FOR EACH STATE/UT	138-149
TABLE (28)	PER 1000 DISTRIBUTION OF SELF-EMPLOYED PERSONS AGED 15 YEARS & ABOVE IN LABOUR FORCE BY AVERAGE MONTHLY EARNINGS ACCORDING TO USUAL PRINCIPAL STATUS APPROACH (PS) FOR EACH STATE/UT	150-161
TABLE (29)	PER 1000 DISTRIBUTION OF WAGE SALARIED PERSONS AGED 15 YEARS & ABOVE IN LABOUR FORCE BY AVERAGE MONTHLY EARNINGS ACCORDING TO USUAL PRINCIPAL STATUS APPROACH (PS) FOR EACH STATE/UT	162-173
TABLE (30)	PER 1000 DISTRIBUTION OF CONTRACT WORKERS AGED 15 YEARS & ABOVE IN LABOUR FORCE BY AVERAGE MONTHLY EARNINGS ACCORDING TO USUAL PRINCIPAL STATUS APPROACH (PS) FOR EACH STATE/UT	174-185
TABLE (31)	PER 1000 DISTRIBUTION OF CASUAL WORKERS AGED 15 YEARS & ABOVE IN LABOUR FORCE BY AVERAGE MONTHLY EARNINGS ACCORDING TO USUAL PRINCIPAL STATUS APPROACH (PS) FOR EACH STATE/UT	186-197
TABLE (32)	PER 1000 DISTRIBUTION OF UNEMPLOYED PERSONS AGED 15 YEARS & ABOVE BY METHODS ADOPTED TO SEEK WORK ACCORDING TO USUAL PRINCIPAL STATUS APPROACH (PS) FOR EACH STATE/UT	198-209
TABLE (33)	PER 1000 DISTRIBUTION OF UNEMPLOYED PERSONS HAVING GRADUATE LEVEL QUALIFICATION AGED 15 YEARS & ABOVE BY REASONS OF UNEMPLOYMENT FOR EACH STATE/UT	210-214

TABLE (34)	PER 1000 DISTRIBUTION OF UNEMPLOYED PERSONS HAVING POST GRADUATE LEVEL QUALIFICATION AGED 15 YEARS & ABOVE BY REASONS OF UNEMPLOYMENT FOR EACH STATE/UT	215-219
TABLE (35)	PER 1000 DISTRIBUTION OF WORKERS AGED 15 YEARS AND ABOVE EXCEPT SELF EMPLOYED BY TYPE OF JOB CONTRACT FOR EACH STATE/UT	220-231
TABLE (36)	PER 1000 DISTRIBUTION OF REGULAR WAGE/SALARIED WORKERS AGED 15 YEARS AND ABOVE BY TYPE OF JOB CONTRACT FOR EACH STATE/UT	232-234
TABLE (37)	PER 1000 DISTRIBUTION OF CONTRACT WORKERS AGED 15 YEARS AND ABOVE BY TYPE OF JOB CONTRACT FOR EACH STATE/UT	235-237
TABLE (38)	PER 1000 DISTRIBUTION OF CASUAL WORKERS AGED 15 YEARS AND ABOVE BY TYPE OF JOB CONTRACT FOR EACH STATE/UT	238-240
TABLE (39)	PER 1000 DISTRIBUTION OF WORKERS AGED 15 YEARS AND ABOVE EXCEPT SELF-EMPLOYED WHO RECEIVED PAID LEAVE AND AVAILING SOCIAL SECURITY BENEFITS FOR EACH STATE/UT	241-252
TABLE (40)	PER 1000 DISTRIBUTION OF REGULAR WAGE/SALARIED WORKERS AGED 15 YEARS AND ABOVE WHO RECEIVED PAID LEAVE AND AVAILING SOCIAL SECURITY BENEFITS FOR EACH STATE/UT	253-255
TABLE (41)	PER 1000 DISTRIBUTION OF CONTRACT WORKERS AGED 15 YEARS AND ABOVE WHO RECEIVED PAID LEAVE AND AVAILING SOCIAL SECURITY BENEFITS FOR EACH STATE/UT	256-258
TABLE (42)	PER 1000 DISTRIBUTION OF CASUAL WORKERS AGED 15 YEARS AND ABOVE WHO RECEIVED PAID LEAVE AND AVAILING SOCIAL SECURITY BENEFITS FOR EACH STATE/UT	259-261
TABLE (43)	PER 1000 DISTRIBUTION OF WORKERS AGED 15 YEARS AND ABOVE EXCEPT SELF-EMPLOYED WHO RECEIVED SOCIAL SECURITY BENEFITS BY DIFFERENT SCHEMES FOR EACH STATE/UT	262-273

# **EXECUTIVE SUMMARY**

## ***INTRODUCTION***

- The Present Report relates to the Fifth Annual Employment-Unemployment Survey Report 2015-16 conducted by Labour Bureau.
- The survey has been conducted in all the States/UTs and covers all the districts.
- The field work was executed from April, 2015 to December, 2015.
- A total sample of 1,56,563 households has been covered with a break up of 88,783 households in the rural sector and 67,780 households in the urban sector.
- From the households covered, 7,81,793 members were inquired, out of which 4,48,254 respondents reside in rural households and rest 3,33,539 in urban households.
- The survey results are presented in four volumes namely
  - i. Employment - Unemployment survey 2015-16;
  - ii. Youth Employment - Unemployment survey 2015-16;
  - iii. Education, Skill Development & Labour Force 2015-16;
  - iv. Employment-Unemployment Scenario among different Social Groups 2015-16.
- Labour Force Estimates are derived based on two approaches namely Usual Principal Status (UPS) Approach and Usual Principal and Subsidiary Status (UPSS) Approach.
- A moving reference period of last twelve months from the date of survey was used to derive the estimates based on Usual Principal Status (UPS) Approach and Usual Principal and Subsidiary Status (UPSS) Approach.

- All the Labour Force related tables have been generated State/Gender/Sector/Social Group wise.
- All the Labour Force Estimates have been derived for persons aged 15 years and above only.
- The survey results show that at the All India levels, about 40.4 per cent of the households belong to Other Backward Classes category followed by 29.9 per cent under the others category, 20.3 per cent under the Scheduled Castes category and the rest 9.4 per cent households belong to the Scheduled Tribes category.
- The results show that about 24 percent households benefitted from employment generating schemes like MGNREGA, PMEGP, SGSY and SJSRY etc.
- Only three North Eastern States, namely Tripura, Manipur and Mizoram have more than 70 percent of the households benefitted from MGNREGA.
- In case of number of employed persons in the households, it is found that 48.4 per cent of the households had only 1 employed person followed by 30.6 per cent households with 2 employed persons. Households with 3 employed persons constituted 10.7 per cent and households with 4 & above persons constituted only 5.2 per cent. Remaining 5.1 per cent of the households did not have even a single employed person/earner.
- At the All India level, about 77 per cent of the households were reported to be having no regular wage/salaried person.
- In the present survey, an attempt has also been made to capture the information related to households having saving bank account and average monthly households earnings for each State/UT.
- It is estimated that at the All India level a little more than 67 per cent of the surveyed households had average Monthly Earnings not exceeding 10,000 only. In Rural sector such households

constituted about 77 per cent whereas the corresponding proportion was about 45 per cent among urban households.

- The state of Madhya Pradesh recorded the highest proportion (35.8) percentage of households with average monthly earnings not exceeding to Rs.5,000 followed by West Bengal (34.5 per cent), Uttar Pradesh (30.1 per cent) and Odisha (29.8 per cent).
- It is also estimated that at the All India level, 94.4 per cent of the households had saving bank accounts for both rural and urban sector.
- In Daman & Diu and Lakshadweep, all of the households surveyed had saving bank accounts.
- Union Territory of Chandigarh had 99 per cent of the households with saving bank accounts. Across all States/UT's among the households with saving bank accounts, Chandigarh had the highest proportion of (4.1 per cent) households having average monthly earnings above Rs. 1, 00,000 which is much higher than at All India Level.
- Nagaland state had minimum i.e. 79.2 per cent households having saving bank accounts and out of these the highest proportion (30.2 per cent) of the households had average monthly household earnings of Rs. 20,001 to Rs. 50,000.
- Lakshadweep had maximum (13.8 per cent) households with no earner followed by Kerala (13.2 per cent) and Chandigarh (12.4 per cent).

## **LABOUR FORCE AND WORKER-POPULATION RATIO**

- Labour Force Participation Rate (LFPR) was estimated to be 50.3 per cent under the UPS approach at the All India level or in other words 50.3 per cent of the persons aged 15 years and above were either working or seeking work during the reference period.
- In the rural sector, the LFPR was estimated to be 53 per cent whereas in the urban sector the LFPR was 43.5 per cent under the UPS approach.
- Female LFPR was significantly lower as compared to LFPR among males. At the All India level, female LFPR was estimated to be 23.7 per cent as compared to 75 per cent for males and 48 per cent for transgenders.
- LFPR for different categories based on UPS approach is as below:

<b>All India (in per cent)</b>				
<b>Sector</b>	<b>Male</b>	<b>Female</b>	<b>Transgender</b>	<b>Person</b>
<b>Rural</b>	77.3	26.7	51.1	53.0
<b>Urban</b>	69.1	16.2	41.2	43.5
<b>Rural + Urban</b>	75.0	23.7	48.0	50.3

- The Worker Population Ratio (WPR) was estimated to be 47.8 per cent at the All India level under the UPS approach or in other words 47.8 per cent of the persons aged 15 years & above were reported to be employed under the reference period.
- In rural sector, the WPR was estimated to be 50.4 per cent under the UPS approach as compared to 41.4 per cent in the urban sector.
- The female WPR was estimated to be 21.7 per cent at the All India level under the UPS approach as compared to the male WPR of 72.1 per cent and 45.9 per cent for transgenders.

## **THE EMPLOYMENT-UNEMPLOYMENT SITUATION**

- The unemployment rate was estimated to be 5.0 per cent at the All India level under the UPS approach or in other words 5.0 per cent of the persons aged 15 years and above who were available for work could not get work during the reference period.
- In rural sector, unemployment rate was 5.1 per cent whereas in urban sector, the unemployment rate was 4.9 per cent under the UPS approach.
- The unemployment rate was significantly higher among females as compared to males. At the All India level, the female unemployment rate was estimated to be 8.7 per cent, whereas for males it was 4.0 per cent (under the UPS approach).
- In urban areas, the female unemployment rate was estimated to be 12.1 per cent at the All India level under the UPS approach as compared to 3.3 per cent for males and 10.3 per cent for transgenders.
- The unemployment rate for different categories based on UPS approach is given below.

<b>All India (in per cent)</b>				
<b>Sector</b>	<b>Male</b>	<b>Female</b>	<b>Transgender</b>	<b>Person</b>
<b>Rural</b>	4.2	7.8	2.1	5.1
<b>Urban</b>	3.3	12.1	10.3	4.9
<b>Rural + Urban</b>	4.0	8.7	4.3	5.0

***To get a better picture about the Employment situation, it will be useful to look at the distribution of workers or employed persons according to the nature of their employment***

- Majority of the employed persons were found to be self employed based on both the UPS and UPSS approach.
- At the All India level, 46.6 per cent of the workers were found to be self employed under the Usual Principal Status Approach followed by 32.8 per cent as casual labour. Only 17 per cent of the employed persons were wage/salary earners and the rest 3.7 per cent were contract workers.
- Employed persons are further classified on the basis of economic activity pursued by them. At the State/UT level, results are presented at Section level (Section A-U) based on National Industrial Classification, 2008.
- The survey results show that majority of the persons were employed in the primary sector. At the All India level, based on Usual Principal Status Approach, 46.1 per cent of the persons were estimated to be employed under Agriculture, Forestry and Fishing sector, followed by 32 percent in tertiary sector and 21.8 percent in the secondary sector.
- ***It is pretty well-known that many of the persons who are reported as ‘employed’ or ‘workers’ in official publications do not get work for the entire duration of their stay in the Labour Force. And even those who get some work or the other for the entire duration may be getting work for only a small fraction of the time they are available for work. This apart, some may be working on jobs which do not allow them to fully utilise their abilities or from which they earn very low incomes. All this constitutes under-***

***employment which remains a worrying aspect of the employment –unemployment scenario in the country. Fifth round of Annual Employment Unemployment survey also apart some important estimates for the under-employment, considering only the duration of work available to participants in the Labour Force.***

- 60.6 per cent of the persons aged 15 years and above who were available for work for all the 12 months during the reference period were able to get work throughout the year, at the All India level. In rural areas, 52.7 per cent of the persons aged 15 years and above who were available for work for all the 12 months during the reference period were able to get work throughout the year at the All India level, whereas the corresponding figure for urban areas was 82.1 per cent.
- The present survey has also collected data on parameters like methods adopted to seek work by the unemployed, reasons for unemployment among graduates and post graduates, type of job contract, availability of paid leave & social security benefits and social security benefits by different schemes.
- At the All India level, a majority 67.5 per cent of the self employed workers had average monthly earnings up to Rs 7500. Only 0.1 per cent of the self employed were estimated to have earnings above Rs 1 lakh.
- Similarly, 57.2 per cent i.e. more than half of the regular wage/salaried workers had monthly average earnings up to Rs 10,000. At the All India level 38.5 per cent of the contract workers and 59.3 per cent of the casual workers had monthly earnings of up to Rs 5000.
- At the All India level, majority of unemployed persons (33.5 per cent) used more than two methods to seek work, followed by, through friends & relatives (24.1 per cent), application made in

response to advertisement (23.7 per cent) and through employment exchange (4.3 per cent).

- At the All India level, 58.3 per cent of unemployed graduates and 62.4 per cent of unemployed post graduates cited non availability of jobs matching with education/skill and experience as the main reason for unemployment followed by non availability of adequate remuneration cited by 22.8 per cent of graduates and 21.5 per cent of post graduates.
- At the All India level, 64.9 per cent of the regular wage/ salaried workers, 67.8 per cent of the contract workers and 95.3 per cent of the casual workers do not have a written job contract. 27 per cent of the regular wage/salaried workers and 11.5 per cent of the contract workers had written job contract of more than three years.
- At the All India level, just 20.6 per cent of workers except self employed received paid leave and 21.6 per cent availed social security benefits. A majority 71.2 per cent of workers were not eligible for social security benefits.

# CHAPTER I

## INTRODUCTION

### Employment: Why does it matters?

**1.1** Employment generation is the key channel through which economic growth translates into prosperity for the population. In a growing economy, employment growth with rising productivity is the most effective mechanism available to the poor to participate in the growth process and raise their standard of living. High economic growth, therefore, unless accompanied by quality employment opportunities will raise inequalities and is therefore undesirable. Thus, gainful employment generation is the bedrock of attaining growth with equity and to alleviate poverty.

**1.2** Using the cross country data Rizwanul, 2004<sup>1</sup> empirically demonstrates the link between poverty reduction and employment intensity of growth. He also employs cross country analysis to show the impact of employment and labour market related variables on poverty reduction and finds that structural transformation of employment towards manufacturing and other non-farm sectors, education and

---

<sup>1</sup>Islam, Rizwanul, 2004, "The Nexus of Economic Growth, Employment and Poverty Reduction: An Empirical Analysis". ILO, *Issues in Employment and Poverty Discussion Paper*.

lowering of the dependency burden (i.e., increase in labour force participation) make a positive contribution to poverty reduction. In the short run, the sectoral productivity and employment pattern of growth may have important implications for poverty alleviation. Employment-intensive growth in the secondary sector is associated with decreases in poverty. (Gutierrez et al, 2007)<sup>2</sup>. The Government of India's 'Make in India Campaign' aimed at making India a manufacturing hub, is a significant step towards achieving employment intensive growth as it seeks "to create 100 million additional jobs by the year 2022 in the manufacturing sector"<sup>3</sup>.

**1.3** Rapid employment generation assumes even greater importance for India which is projected to be the youngest nation in the world in terms of size by the year 2020. As the Economic Survey 2015-16<sup>4</sup> puts it "To exploit its demographic dividend, India must create millions of "good"— safe,

<sup>2</sup>Gutierrez, Catalina, Carlo Orecchia, Pierella Paci and Pieter Serneels, 2007, "Does Employment Generation Really Matter for Poverty Reduction?" Poverty Reduction and Development Effectiveness Department of the Poverty Reduction and Economic Management Network: World Bank, *Policy Research Paper*.

<sup>3</sup> <http://www.makeinindia.com/policy/national-manufacturing>

<sup>4</sup>Government of India, Ministry of Finance, *Economic Survey, 2015-16*.

*productive, well-paying—jobs.”* Thus, employment matters to achieve growth with equity and to successfully meet the challenge of the impending demographic dividend.

**1.4** Women will account for a substantial proportion of the working age population and therefore participation of women in the labour force is of utmost importance to realize the full benefits of demographic dividend. However, a related concern in the Indian context is the low female Labour Force Participation Rates (LFPR). The 4<sup>th</sup> EUS also revealed that the LFPR for women was significantly lower than that for males in both rural and urban areas. The present survey divulges similar trend with LFPR for women at All India level further declining to 23.7 per cent as compared to 25.8 per cent recorded in 4<sup>th</sup> EUS. Increasing LFPR for women is vital to achieving high growth of employment and overall economic growth. The Government is keen to address the issue of low female LFPR and WPR and has launched various legislation based schemes and other programmes/schemes where the emphasis is on female participation, for example, the Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA), guaranteeing at least 100 days of employment to every household in rural areas has been enacted with a stipulation of one-

third participation by women (Economic Survey 2015-16)<sup>5</sup>.

### **Significance of Labour Statistics & ILO Resolutions on Labour Statistics**

**1.5** Availability of statistics on economically active population at frequent regular intervals is of utmost importance to monitor the economic/labour market situation, to devise, execute and evaluate the policies for human resource development including skill development, employment creation and poverty reduction. The frequency of employment data becomes even more crucial in the wake of the growing exposure of India to the global economic upheavals and its consequent impact on the employment scenario within the country. In this regard the Resolution 1 adopted by the 19<sup>th</sup> International Conference of Labour Statisticians (ICLS) also recommends that *“To meet the need for information to monitor labour markets and work patterns, a national data collection strategy should be established that allows for different sets of statistics to be reported, as relevant, on a sub-annual basis (main aggregates of employment, the labour force, labour underutilization), annual basis (detailed statistics of the labour force and of labour*

---

<sup>5</sup> Government of India, (As n. 4 above).

*underutilization, including unemployment) and less frequent basis (depending on national circumstances statistics on participation and working time in own-use production work, unpaid trainee work and volunteer work, particular topics, such as labour migration, child labour etc)”<sup>6</sup>.*

**1.6** The ILO Convention No. 160 and Recommendation No. 170 concerning Labour Statistics was adopted by General Conference of International Labour Organization way back in 25th June 1985 recognising the need for reliable labour statistics both in developed and in developing countries, particularly for the purposes of planning and monitoring social and economic progress, as well as for industrial relation. Each member country, which ratifies ILO Convention 160, undertakes that it will regularly collect, compile and publish basic labour statistics, which shall be progressively expanded in accordance with its resources to cover the specified subjects.

**1.7** The Resolution 1 adopted by the latest 19<sup>th</sup> International Conference of Labour Statisticians (ICLS) calls for countries to develop systems of work statistics to achieve a number of objectives

---

<sup>6</sup>Report of the Conference: “19<sup>th</sup> International Conference of Labour Statisticians”, Geneva, 2–11 October 2013/ International Labour Office, Department of Statistics. Geneva, ILO, 2013.

ranging from monitoring of labour markets and labour underutilization to assess participation in different forms of work among population groups such as women and men, young people, children etc. The resolution also calls for the system should be developed in consultation with the various users of the statistics and in harmony with other economic and social statistics and be designed so as to provide current statistics for short-term needs and statistics collected at longer intervals for structural and in-depth analysis and as benchmark data.

### **Labour Statistics in India & Users of Labour Statistics in India**

**1.8** Labour Statistics are collected, compiled and disseminated by several agencies in India. Ministry of Labour and Employment is one of the most important sources of labour statistics in India. It collects labour statistics through the offices of Labour Bureau, Directorate General of Employment and Training (DGE&T), Directorate General of Labour Welfare (DGLW) and Directorate General Factory of Advice Service & Labour Institutes (DGFASLI). Ministry of Statistics and Programme Implementation is another major source which collects and publishes the data through two important

organisations viz. the Central statistical Organisation (CSO) and the National Sample Survey Organisation (NSSO). Besides these two, State governments also collect labour statistics, mostly through the Department of Labour & Directorate of Economics & Statistics.

**1.9** In India, the main users/interest groups who make use of the employment statistics are a) Planners, Policy makers and administrators for planning and monitoring and policy formulation b) Research workers, media and civil society c) Workers' organisations and employers' associations: and; d) International agencies

### **Labour Force Surveys, Main Characteristics of the Present Survey**

**1.10** The Labour Force Surveys primarily provide estimates of Labour Force Participation Rate, Worker Population Ratio and Unemployment Rate. These are some of the key indicators of the labour market situation. Besides, they also provide descriptive data by social groups, sex, age, education, rural/urban sector, industry, occupation and type of activity. These indicators are fundamental to our understanding of the prevailing situation of labour supply, labour demand and structure of employment in the country.

**1.11** The current Employment & Unemployment Survey is the fifth in the series providing annual results of the status of labour market in India. The survey covers the entire country. The field work of the survey was conducted in April, 2015 to December, 2015. The estimates of the Labour Force parameters and its derivatives are generated at State/UT/All India level.

**1.12** Considering the importance of Labour Statistics and its use by different agencies, it has been decided to bring the results in four volumes catering to the demand of different Users. The four different volumes are as follows.

- a) Employment -Unemployment Scenario 2015-16.
- b) Youth Employment - Unemployment Scenario 2015-16.
- c) Education, Skill Development & Labour Force 2015-16.
- d) Employment-Unemployment Scenario among different Social Groups 2015-16.

### **Youth Employment**

**1.13** Youth is an asset for any nation and productive employment of youth is essential for them to contribute to its economic development. Especially, for a young nation like India on verge of the demographic dividend phase, achieving high rate of youth employment is of paramount importance.

Youth unemployment often impose significant economic and social costs on a country. In this regard, governments are rightly concerned about rising levels of youth unemployment and underemployment because of not only the direct economic costs (include financing unemployment benefits, retraining schemes and other active labour market policies, and the loss in potential output resulting from lower employment rates), but also due to the social impact of joblessness as manifested by increased crime, mental health problems, violence, drug taking and social exclusion (Mitra & Verick, 2013)<sup>7</sup>.

**1.14** Youth unemployment and underemployment is prevalent around the world because young people lack skills, work experience, job search abilities and the financial resources to find employment (United Nations, 2003; ILO, 2006; Matsumoto et al., 2012 as cited in Mitra & Verick, 2013)<sup>7</sup>. Moreover, young Indians face major barriers because of poverty and low levels of human capital (Mitra & Verick, 2013)<sup>8</sup>. In case of India the unemployment rate among youth is generally higher than the rest of the population and it increases

with the level of education. Thus youth employment deserves special attention due to specific challenges faced by the youth in the form of lack of experience, heightened vulnerability during economic downturns in terms of difficulty in finding jobs and high chances of being laid off ('last in first out').

**1.15** The Government has undertaken numerous initiatives to boost the youth employment scenario in the country. Noteworthy among these are the 'Start-up India', 'Make in India' and 'Skill India' initiatives. The 'Start-up India' initiative seeks to unleash the entrepreneurial potential of young entrepreneurs and turn them from job seekers to job creators. The Government is also targeting growth of the employment intensive manufacturing sector through 'Make in India' initiative which will generate employment and self employment opportunities for the growing young population.

**1.16** During the Fourth Annual Employment-Unemployment Survey 2013-14 a separate report on "Youth Employment Unemployment Scenario 2013-14" was published. For the 5<sup>th</sup> EUS also data on labour force indicators for the youth has been compiled in a separate volume **"Youth Employment Unemployment Scenario 2014-15"**.

<sup>8</sup>Mitra, Arup, Verick, Sher (2013) (as n. 7 above).

## Skill Development

**1.17** Skill development is central to achieving high levels of sustainable economic growth. A low-skill, low-productivity, low-wage economy is unsustainable in the long term and is incompatible with poverty reduction, this is the vicious circle of inadequate education, poor training, low productivity and poor quality jobs and low wages that traps the working poor and excludes workers without relevant skills from participating in economic growth and social development in the context of globalization and this negatively affects the competitiveness of enterprises and their capacity to contribute to economic and social development (ILO, 2008)<sup>9</sup>. Thus skill development is crucial to fuel innovation, increase productivity, development of enterprise, technological change, investment, diversification of the economy, and competitiveness.

**1.18** In case of India, skill development faces the specific challenges of integrating the large rural workforce with limited access to training infrastructure, improving the productivity of huge informal workforce and support its formalization and to realize the

demographic dividend by right skilling of the youth. As per the National Skill Development Mission Document, India currently faces a severe shortage of well-trained, skilled workers. It is estimated that only 2.3 per cent of the workforce in India has undergone formal skill training as compared to 68 per cent in the UK, 75 per cent in Germany, 52 per cent in USA, 80 per cent in Japan and 96 per cent in South Korea and large sections of the educated workforce have little or no job skills, making them largely unemployable (GoI, National Skill Development Mission)<sup>10</sup>. The Government is tackling the challenge of skill development in mission mode. A Ministry of skill development & entrepreneurship has been set up for coordinating the efforts of all concerned stakeholders in the field of Skill Development. The National Skill Development Mission has been launched to rapidly scale up skill development efforts in India.

**1.19** Reliable statistics on skill and training profiles of the Indian labour force is a vital input for pragmatic assessment of skill gap and for identifying the areas in skill development where action is required. In an endeavour to provide consistent database on

---

<sup>10</sup><http://www.skilldevelopment.gov.in/assets/images/Mission%20booklet.pdf>

skill profile of the labour force and workforce, a separate Volume on **‘Education, Skill Development & Labour Force 2014-15’** has been compiled.

### **Social Groups**

**1.20** In the context of India, a significant dimension of inclusiveness relates to economic development of different social groups i.e. SCs, STs and the OBCs. Achieving equity for these groups is essential to realise the goal of inclusive growth.

**1.21** As part of the Fifth Annual Employment Unemployment Survey, information has been collected on various social groups and data on various labour force indicators for these social groups has been compiled in a separate volume **‘Employment-Unemployment Scenario among Different Social Groups’**.

### **District-level Estimates**

**1.22** District level data on labour force indicators can serve as a crucial input in development planning at the district level. Availability of data at such micro level also facilitates effective monitoring and evaluation of the various programmes targeting employment generation. During the third Annual Employment Unemployment Survey 2012-13, estimates at district level were started on pilot basis for the State of Andhra Pradesh. For deriving estimates at district level, the

State Government had covered matching sample along with Labour Bureau main survey. By polling the central and state sample, district level estimates for the state of Andhra Pradesh were prepared. During the fourth round, the district level estimates were generated for about 120 districts in the country for five states namely Andhra Pradesh, Telangana, Tamil Nadu and Maharashtra & Puducherry.

**1.23** During the 5<sup>th</sup> Annual Employment Unemployment Survey five States/UTs namely Andhra Pradesh, J&K, Maharashtra, Puducherry and Telangana had expressed their desire to have district level estimates of employment data. Labour Bureau acceded to their request and provided all the technical guidance in selection of rural/urban sample, training to the enumerators/supervisors and supply of blank schedules etc. All the five States covered matching sample along with Labour Bureau and completed the field work. The data for the district level samples has been processed to derive district level estimates by Labour Bureau.

### **Data Collection**

**1.24** To ensure optimal utilization of available resources, Directorates of Economics and Statistics of all the States/UTs were requested to undertake data collection in their respective

States/UTs. Out of 36 States/UTs, 16 States/UTs agreed and undertook the fieldwork on behalf of Labour Bureau. In the remaining States/UTs Labour Bureau engaged about 400 contract investigators to complete the fieldwork. Labour Bureau provided extensive training to State officials and contract staff through interactive sessions and workshops to familiarize them with the methodology, concepts and definitions and the practical aspects of the field work.

### **Supervision**

**1.25** Usefulness of data depends upon its quality and adherence to the methodology adopted for the survey. Labour Bureau adopted a three-tier supervision of fieldwork to ensure that the data collected is consistent with the agreed definitions and concepts used in the questionnaire. All the States/UTs agreed to perform first level scrutiny by the officials of Directorate of Economics and Statistics (DES) in their respective States. The objective of first level scrutiny is to ensure that sample units are correctly identified; households are listed properly; formation of hamlet groups and sampled households are selected using the prescribed statistical procedure and techniques. Supervisors are also expected to ensure that codes for status, activity, industry group and occupation are consistent with the

responses through random field level inspections and verification of data recorded by the investigators.

**1.26** The second tier of scrutiny is carried out through 120 supervisors engaged on contract basis. They are required to check the reported data for overall consistency and uniformity. In many cases they are also deployed to the field to perform surprise inspections and work alongside the contract investigators in clarifying their doubts and helping investigators in collecting the data. The supervisors carried out number of inspections in different States/UTs in the sample First Stage units to check the filled in schedules for authenticity, consistency etc.

**1.27** In the third tier of supervision, Labour Bureau deposes its own regular officials to verify the quality of data collected. In addition, four consultants have also been hired on contract basis to undertake random scrutiny of schedules and provide day-to-day guidance to field staff and supervisors. Any discrepancies observed at this level were referred back for necessary rectifications at the field.

### **Major Changes/improvements from earlier surveys**

**1.28** During 5<sup>th</sup> Annual Employment Unemployment Survey an attempt has been made

to capture the information related to households having a saving bank account and Average monthly household earnings for each State/UT. In addition, information has also been captured on methods adopted to seek work by the unemployed, reasons for unemployment among graduates and post graduates, type of job contract, availability of paid leave & social security benefits and social security benefits by different schemes for each State/UT. The methodology followed in selecting the sample and coverage in the current survey is almost similar to the fourth Annual Employment–Unemployment Survey. The details of the selection of first stage unit, sample household etc. is detailed at the Annexure for “Sampling Design & Estimation Procedure”. However, based on the experience and the inputs and comments received from the stakeholders, certain changes have been made in the current survey. Questionnaire used for collecting the data has been modified and simplified to improve accuracy and reliability of data.

**1.29** The past experience suggests that selecting households in second stage sampling was less than satisfactory because investigators do not have knowledge, skills and experience of sampling tools and random numbers. The training module for imparting these skills was

simplified in the current survey and higher proportion of time was spent on this aspect of training by organizing mock exercises and workshops. This has resulted in improved quality of data in the current survey.

### **Limitations and future challenges**

**1.30** As suggested elsewhere, credibility of any survey depends upon the accuracy tested over a period of time and general acceptance of the results by the users of information. Unlike the more institutionalized surveys conducted by National Sample Survey Office (NSSO) that tend to establish relationship between expenditure and employment, The purpose of annual employment surveys carried out by Labour Bureau is primarily to assess and estimate the structure and composition of labour force and provide the data to various users on regular basis. Within this broad framework, there are certain shortcomings that need to be overcome in the subsequent rounds.

**1.31** The current methodology is unsuitable for measuring under-employment, disguised employment and seasonality of labour force. Likewise it also does not capture the migration aspects of employment. Further, there are reasons to feel that the survey should be more sensitive to gender attributes to capture the true and

fair value of contribution made by females.

**1.32** Survey of this magnitude conducted every year puts great deal of strain on available resources. There is a need to relook the methodology of sample size and household selection to optimize the available resources without compromising the quality and accuracy of the results. It is assessed that approximately one half of the total time required for survey is attributed to stratification related work and listing of households.

**1.33** Labour Bureau is following a conventional approach of

canvassing paper-based questionnaires.

### **Constitution of the Expert Group**

**1.34** Ministry of Labour & Employment constituted an expert group under the Chairmanship of renowned Statistician Professor S.P. Mukherjee with other experts on the subject as members, to finalize the questionnaires, sampling design, instruction manual & other technical details of the survey. Composition of the Expert group is annexed.

## **CHAPTER-II**

### **HOUSEHOLD CHARACTERISTICS**

#### **Introduction**

**2.1** During the Fifth Annual Employment-Unemployment Survey information has been collected on some important household characteristics. This includes information on household size, households by social group, households benefitted from different employment generating schemes, number of employed persons in the household, households by saving bank accounts, households by average monthly earnings and households by number of wage/salaried persons etc. The findings of the survey on these parameters are discussed in the ensuing paragraphs.

**2.2** A total of 13076 Villages/UFS Blocks were allocated in the sample, out of which 13059 Villages/UFS Blocks were actually covered. Hence, 99.87 per cent is the actual coverage of Village/UFS Blocks during the survey. In the rural sector 7405 villages have been

actually covered, whereas 7416 villages were allocated. For urban sector 5660 Villages/UFS blocks were allocated and 5654 were actually covered during the survey.

**2.3** The survey has been conducted in all the 36 States/UTs by covering all the districts in the country. A sample size of 1, 56,563 households spread across 36 States/UTs have been covered of which 88,783 households belong to the rural sector and the rest 67,780 households to the urban sector. A total of 7,81,793 persons aged 15 years and above have been surveyed out of which 4,48,254 reside in the rural sector sample households and rest 3,33,539 persons in the urban sector sample households covered during the survey.

#### **Members aged 15 years and above in a household**

**2.4** The second stage stratification under the survey to

select the sample household is based on number of members aged 15 years and above in the household. The households studied under the survey have been classified based on the number of members aged 15 years and above in the household. Accordingly, all the households under study are put in four categories as follows:

1. Up to 1 member household;
2. 2-3 members' household;
3. 4-5 members' household;
4. 6 & above members' household.

**2.5** The results in Table 2.1 below show that at the All India level 51.4 percent of the households were having 2-3 member's aged 15 years and above followed by 32.2 per cent of the households having 4-5 member's aged 15 year and above. In case of 6 & above members aged 15 years and above, there were about 12 per cent households at overall level. The State-wise distribution of the households by members aged 15 years & above is presented in (Tables 3, 3.1, 3.2 in Annexure IV).

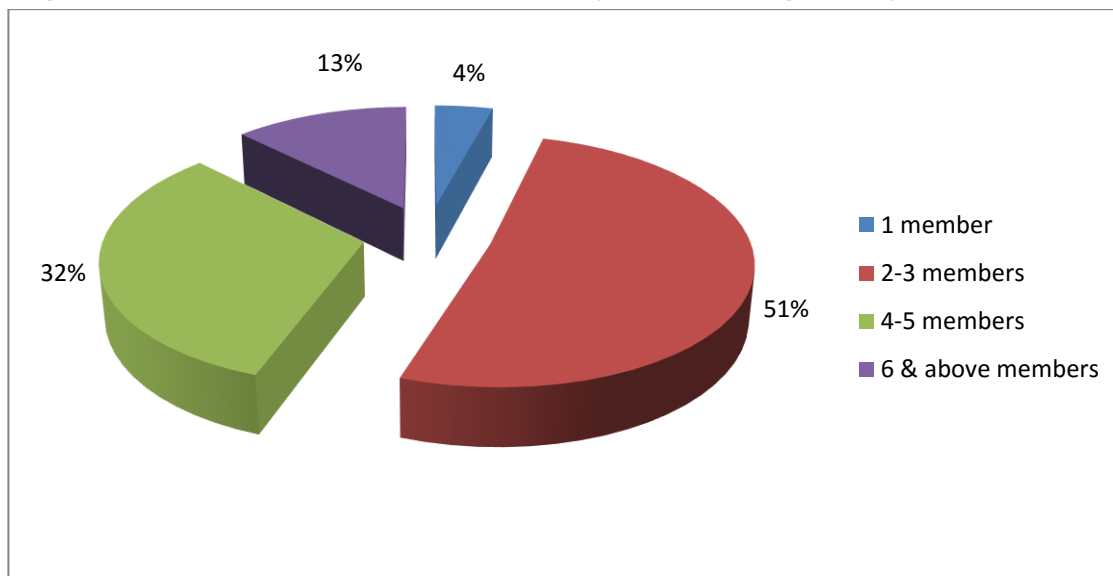

**Table 2.1: Distribution of households by members aged 15 years and above**  
All India (in %)

Particulars	1 member	2-3 members	4-5 members	6 & above members
<b>Rural</b>	4.0	50.5	32.3	13.2
<b>Urban</b>	4.5	53.5	32.0	10.0
<b>Rural + Urban</b>	4.2	51.4	32.2	12.3

**2.6** At sectoral level i.e. rural and urban sector also, similar types of results have been observed. The results are important in the sense that they provide information related to working age persons in the

households at States/UTs level. The results derived will also help in deciding the sample size in each stratum in the forthcoming Annual Employment-Unemployment survey.

**Figure 2.1: Distribution of households by members aged 15 years and above**

### **Social Groups**

**2.7** The households are classified into four social groups, viz., Scheduled Castes, Scheduled Tribes, Other Backward Classes and Others category. The State-wise distribution of the households among different social groups is presented in (Tables 4, 4.1 and 4.2 Annexure IV).

**2.8** Table 2.2 shows the distribution of the households by social groups. The results show that at the All India level, 40.4 per

cent of the households belong to Other Backward Classes category followed by 29.9 per cent under the Others category, 20.3 percent under the Scheduled Castes category and the rest about 9.4 per cent households under the Scheduled Tribes category. Tables 4.1 & 4.2 (Annexure IV) also show the distribution of households among different social groups in rural, urban and rural + urban sectors in different States/UT's.

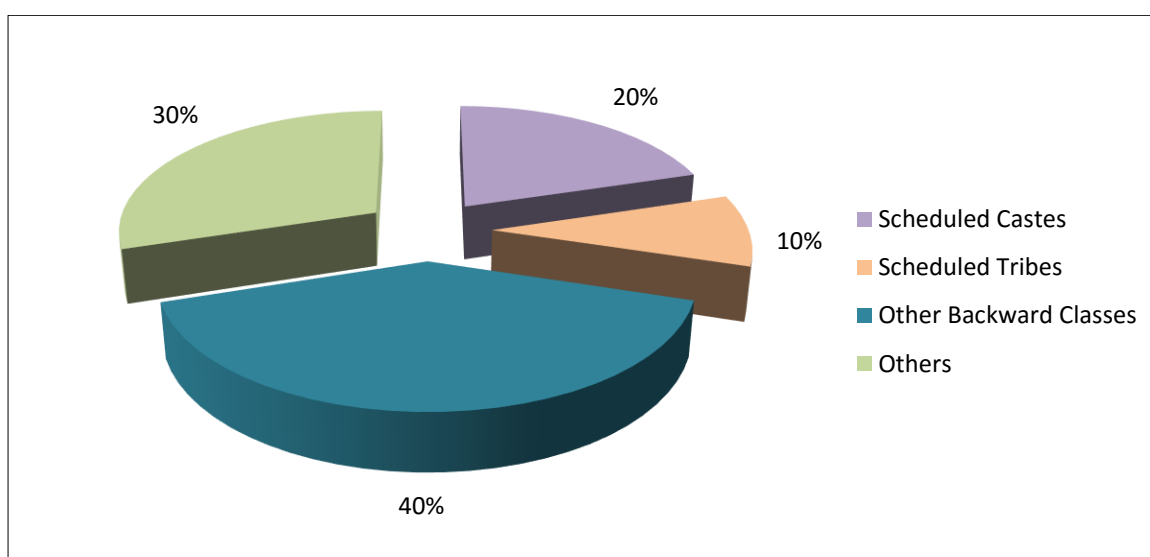

**Table 2.2: Distribution of households by Social Groups (in %)**

Social Group	All India		
	Rural	Urban	Rural + Urban
<b>Scheduled Castes</b>	23.0	13.7	20.3
<b>Scheduled Tribes</b>	11.4	4.6	9.4
<b>Other Backward Classes</b>	40.4	40.2	40.4
<b>Others</b>	25.1	41.5	29.9

**2.9** In the rural sector, a trend, similar to the one observed at the All India level (rural + urban) was visible. In rural areas, the proportion of the households under Other Backward Classes category was highest with 40.4 percent followed by 25.1 percent under the Others category, 23 percent under the Scheduled Caste category and the rest 11.4 percent under the Scheduled Tribes group.

**2.10** In case of urban sector, the Others category households had maximum proportion (41.5 per cent) followed by 40.2 per cent households under the Other Backward Classes category, 13.7 per cent households under the Scheduled Castes category and 4.6 percent households were reported under the Scheduled Tribes category at the All India level.

**Figure 2.2: Distribution of households by social group at the All India Level (R +U)**

## Households Benefitted from Employment Generating Schemes

**2.11** In the current survey a block was canvassed to ascertain the information from the

households regarding members of the household benefitted from the major employment generating schemes during the reference period as detailed in Box 2.1.

### Box 2.1: Major Employment Generation Schemes

**1. Mahatma Gandhi National Rural Employment Guarantee Act (MGNREGA)** enacted on 2005, with the aim to enhance livelihood security of the households in rural areas of the country by providing at least 100 days of wage employment in a financial year to every household whose adult members volunteer to do unskilled manual work.

**2. Prime Minister Employment Generation Programme (PMEGP)** was launched in August 2008 with the objective to generate employment opportunities in rural as well as urban areas of the country by providing credit linked subsidy for setting up of micro enterprises.

**3. Swaranajayanti Gram Swarozgar Yojna (SGSY)** came in to effect on 1999, with the aim at bringing the rural BPL families above poverty line by organizing them in to Self Help Groups (SHGs) through the process of social mobilization and their training and capacity building, provision of credit linked subsidy, technology inputs etc. in order to enable them to be self employed and taking up some income generation activity.

**4. Swarna Jayanti Shahari Rozgar Yojna (SJSRY)** for urban areas a holistic scheme implemented in 1997 with the aim to provide gainful employment to the urban unemployed and under employed poor population and to help them set up self employment ventures and also through providing wage employment by utilizing their labour construction of socially and economically useful public assets.

Besides the above listed schemes there may be some other schemes of the Centre/State governments from which the households have got benefitted during the reference period, are also included under the category of 'Other schemes'.

The results thrown out by the survey will help Central and State government agencies to assess the progress made in the schemes so far and take corrective action to ensure that benefits of the schemes reach the targeted population.

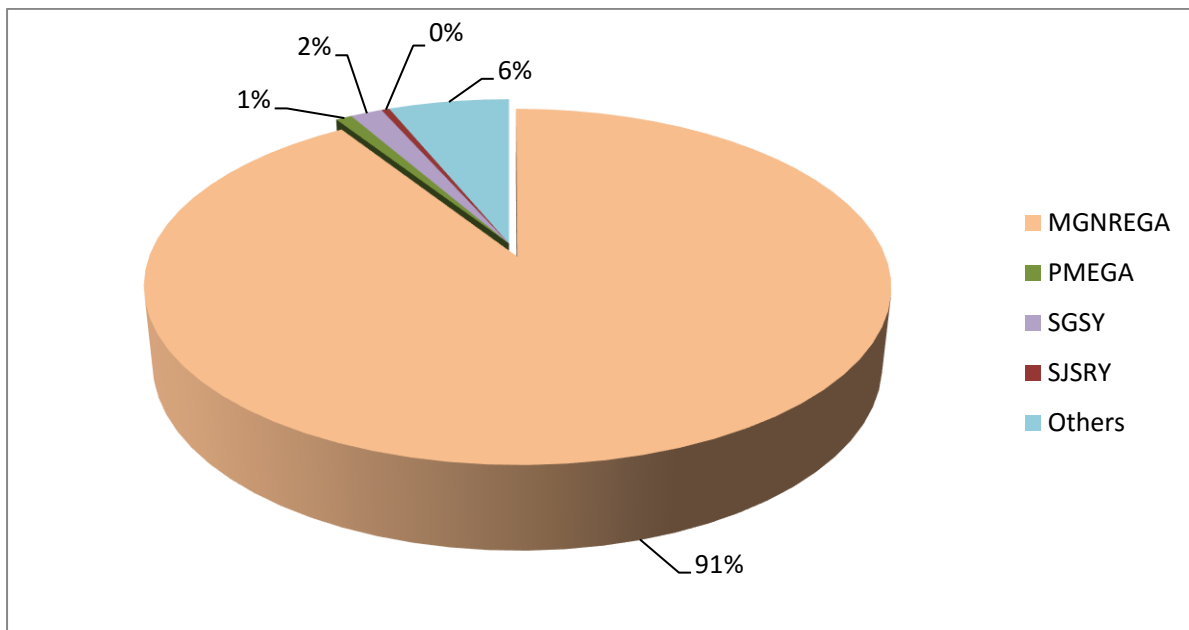

**2.12** The results show that about 24 per cent of the households

were benefitting from either of the employment generating schemes at overall level. Among the benefitted households, 91 per cent of the households were benefitted from MGNREGA. At the all India level 21.9 per cent households were found to have benefitted from MGNREGA followed by 1.5 per cent from other schemes except

MGNREGA, PMEGP, SGSY and SJSRY. All States/UT's have shown positive number of households benefitting under MGNREGA during the reference period except Delhi and Chandigarh, where even not a single household was benefitted from MGNREGA. The North Eastern States, except Arunachal Pradesh, Assam, Meghalaya and Sikkim had more than 70 per cent of the households having benefitted from the scheme MGNREGA. On the other hand, lowest i.e. 0.2 per cent households benefitted under MGNREGA scheme was recorded for the Union Territory of Dadra & Nagar Haveli during reference period.

**2.13** Similar trends have been observed across social groups at the All India level i.e. 28.4 per cent SCs households, 31.3 per cent ST households, 19.8 percent OBC households and 14.9 per cent households from others group benefitted from the MGNREGA during the survey. The percentage of households benefitted from remaining schemes was negligible across all social groups (Table 5 to 5.4, Annexure IV). Very few households were observed to have benefitted from PMEGP, SGSY and SJSRY across states as well as across social groups. This fact reveals that how much significance MGNREGA has gained since its inception.

**Figure 2.3: Distribution of Households benefitted from Employment Schemes**

## Households by number of employed persons

**2.14** Households are categorised according to the number of employed persons based on Usual Principal Status approach in that household. For that, all the households are grouped in five categories as follows:

- 1) None (no family member is employed);
- 2) 1 person employed households;
- 3) 2 persons employed households;
- 4) 3 persons employed households;

5) 4 & above persons employed households

**2.15** Table 2.3 shows that about 48.4 per cent of the households had only one person as employed/earner followed by households with 2 employed persons (30.6 per cent). Households with 3 employed persons constitute 10.7 per cent and 5.1 per cent of the households did not have a single employed person/earner and the households with 4 & above persons as employed/earner constitutes 5.2 per cent.

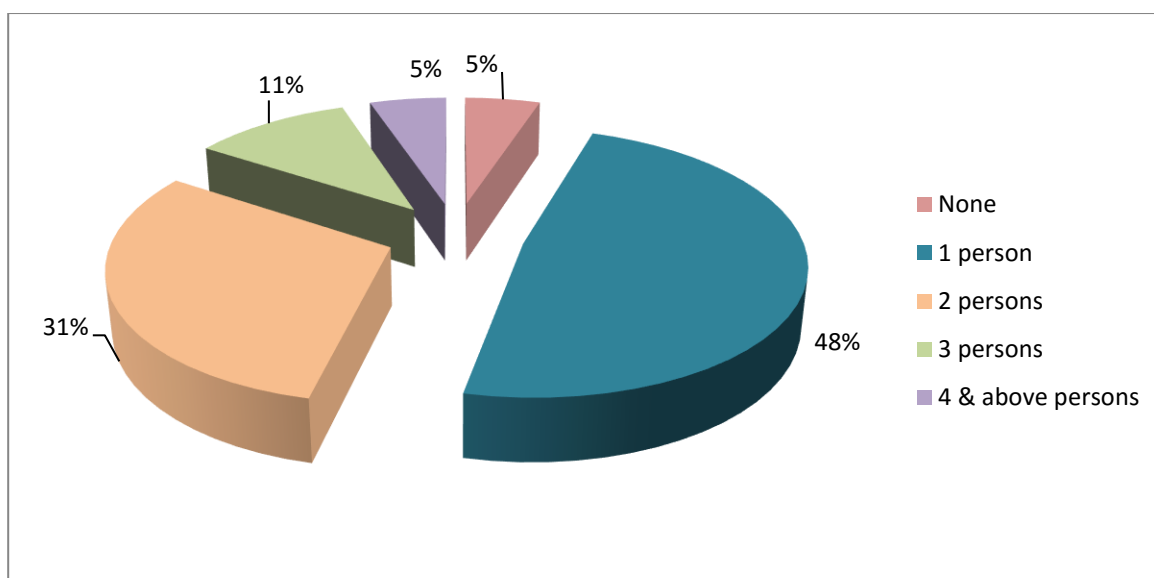

**Table 2.3: Distribution of households by number of employed persons aged 15 years and above**

Head	All India (in %)				
	None	1 person	2 persons	3 persons	4 & above persons
<b>Rural</b>	4.0	44.1	32.9	12.4	6.5
<b>Urban</b>	7.5	58.7	25.0	6.7	2.1
<b>Rural + Urban</b>	5.1	48.4	30.6	10.7	5.2

**2.16** The same trend was visible in both rural and urban areas also where households with 1 employed person constituted the highest proportion followed by households with 2 employed persons. In urban areas, the proportion of households with 1

employed person was significantly higher (about 59 per cent) when compared to other types of households. The proportion of the households with no employed person or earner was 7.5 per cent in urban areas as compared to 4 per cent in rural areas.

**Figure 2.4: Distribution of households by no. of Employed Persons**

### Households by Number of Wage/Salaried Persons

**2.17** In Table 2.4, information is compiled on proportion of wage/salaried persons aged 15 years and above in a household based on Usual Principal Status approach. The households are

classified into four categories namely i) no wage/salaried person in the household, ii) One wage/salaried person, iii) Two wage/salaried persons and iv) Three and more wage/salaried persons in the household.

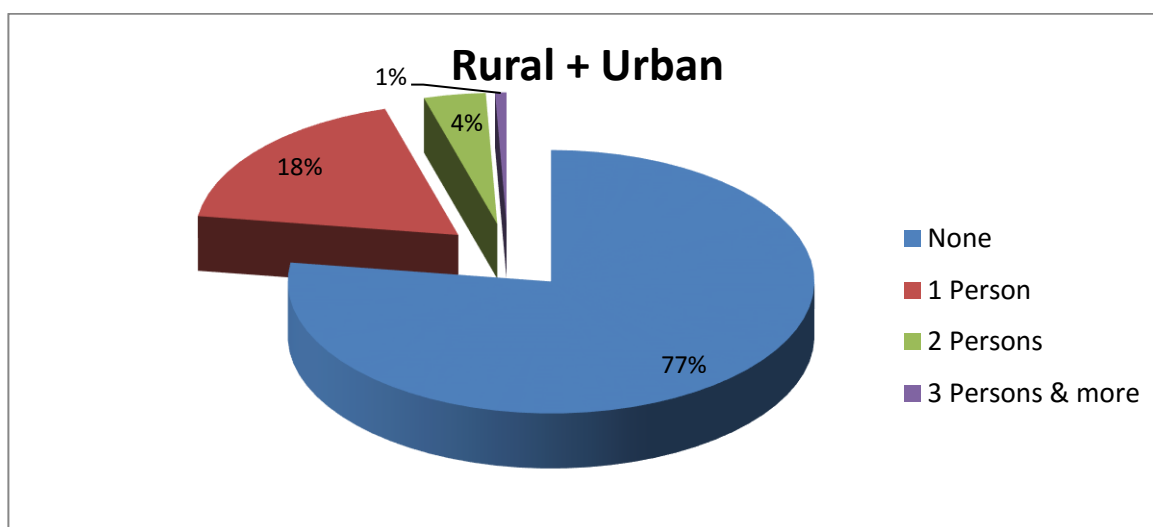

**Table 2.4: Distribution of households by number of wage/salaried persons aged 15 years and above**

Head	All India (in %)			
	None	1 Person	2 Persons	3 Persons & More
<b>Rural</b>	83.6	13.5	2.5	0.5
<b>Urban</b>	62.1	29.8	6.8	1.3
<b>Rural + Urban</b>	77.3	18.2	3.8	0.7

**2.18** It is clearly evident that at the All India level, about 77 per cent of the households were reported to be having no wage/salaried person in their households.

**2.19** It was also reported that more than 83 per cent of the households in rural areas had no wage/salaried person (Table 7.7.1 and 7.2, Annexure IV).

**Figure 2.5: Distribution of households by number of Wage/Salaried Persons**

### Households by Average Monthly Earnings

**2.20** In this survey an attempt has also been made to compile the information on Average Monthly Households Earnings. It could be seen from Table 2.5 that overall at the All India level a little more than 67 per cent of the surveyed

households had average monthly earnings up to Rs. 10,000/- only. In rural sector such households constituted about 77 per cent of the households whereas it was about 45 per cent for similar urban households. Only 0.2 per cent of the households reported earnings above Rs. 1, 00,000.

**Table 2.5: Households by average monthly earnings**

Head	All India (in %)						
	Up to 5000	5001 to 7500	7,501 to 10,000	10,001 to 20,000	20,001 to 50,000	50,001 to 1,00,000	Above one Lakh
Rural	27.3	29.6	20.0	16.0	6.3	0.7	0.1
Urban	9.3	15.3	20.3	28.5	21.7	4.4	0.6
Rural + Urban	22.1	25.4	20.1	19.6	10.8	1.8	0.2

**2.21** The State-wise distribution of the households by average monthly earnings is presented in (Table 8, 8.1 and 8.2 Annexure IV). The state of Madhya Pradesh

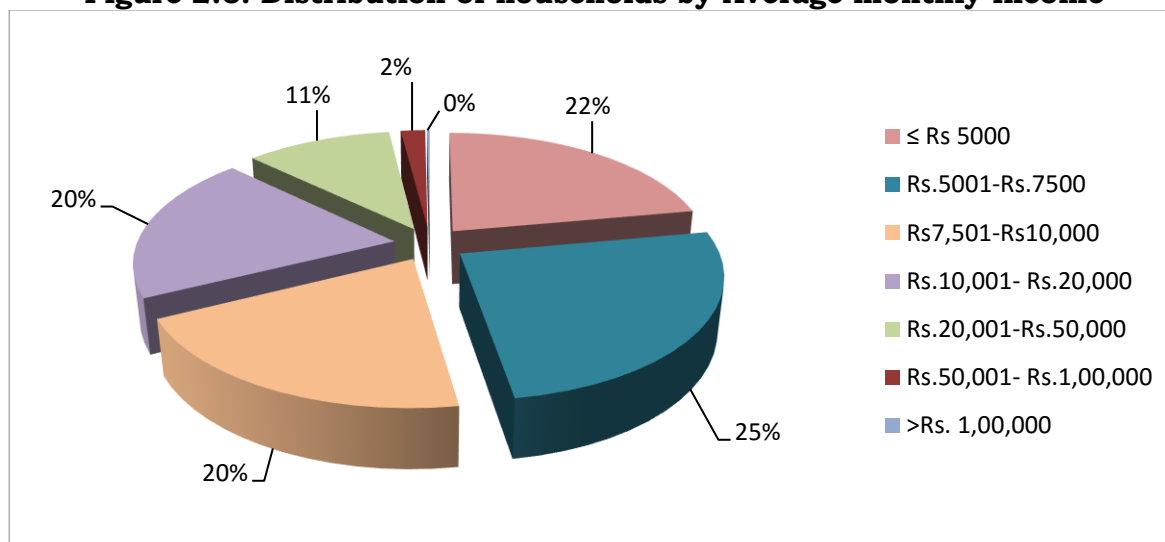

recorded highest (35.8 per cent) households with lowest average monthly earnings i.e., up to Rs. 5000/- followed by West Bengal (34.5 per cent) Uttar Pradesh

(30.1 per cent) and Odisha (29.8 per cent).

On the other hand, National Capital Delhi had only 1.5 per

cent of the households with up to Rs. 5000/- average monthly earnings.

**Figure 2.6: Distribution of households by Average monthly income**

**Table 2.6: Households having saving bank account by average monthly earnings**

Head	HH	All India (in%)						
		Up to 5000	5001 to 7500	7,501 to 10,000	10,001 to 20,000	20,001 to 50,000	50,001 to 1,00,000	Above one Lakh
Rural	93.4	25.5	29.8	20.6	16.6	6.7	0.7	0.1
Urban	96.8	8.3	15.1	20.3	29.0	22.3	4.5	0.6
Rural+Urban	94.4	20.4	25.4	20.5	20.3	11.3	1.9	0.3

### Households by Saving Bank Accounts and Average Monthly Earnings

2.22 Table 2.6 presents percentage distribution of households having savings bank account. The survey results reveal that at the All India level 94.4 per cent of the households had saving bank accounts. (Government, Private and Co operative bank) for

both rural and urban sector. The figure was much higher than the official figure (58.7 per cent) of households with saving bank accounts in India<sup>11</sup>. Government

11

<http://financialservices.gov.in/banking/overview%20and%20progress%20on%20financial%20inclusion%20.pdf> assessed on 29.03.2016

of India's recent initiatives to enhance the financial inclusion and accessibility of financial institutions such as Pradhan Mantri Jan Dhan Yojna and Pradhan Mantri Micro Units Development and Refinance Agency (Mudra) Yojana may have translated into entering of more population in the ambit of formal financial activities. Table 2.6 shows that Out of 94.4 per cent households, 25.4 per cent households reported their average monthly household's earnings in the range of Rs. 5001 to Rs. 7500 followed by 20.5 percent households with the range of average monthly earnings of Rs. 7501 to Rs. 10,000. Only in case of 0.3 per cent households, earnings above Rs. 1, 00,000 have been reported with saving bank account (Table 9.9.1 and 9.2 Annexure IV).

### **Households by Number of Earners and Average Monthly Earnings**

**2.23** It has been observed that overall at the All India level (Table 2.7) 5.1 per cent of the households did not have even a single earner. Among the

households without any earner, 51.5 per cent households have average monthly earnings up to Rs. 5,000.

**2.24** Lakshadweep has the highest (13.8 per cent) households with no earner followed by Kerala (13.2 per cent) and Chandigarh (12.4 per cent). Across all States/UTs, among the households with no earner Chandigarh has the highest (2.4 per cent) households with average monthly earnings above Rs. 1,00,000 (Table 10 to 10.4 Annexure IV).

**2.25** At the All India level, 48.4 per cent households had only a single earner. Among single earner households, 30.4 per cent of the households reported average monthly earnings up to Rs. 5,000 followed by 25.2 per cent of the households with Rs. 5,001 to Rs. 7500. Tripura had the highest percentage of households (62.5 per cent) with a single earner followed by Jammu & Kashmir (60.2 per cent). It has also been observed that 30.6 per cent households reported having 2 earning family members and out of these, most of the households

(32.2 per cent) had average monthly earnings in the range of Rs. 5001 to Rs. 7500 followed by

21 per cent with Rs. 7501 to Rs. 10,000.

**Table 2.7: Households by earning members and average monthly earnings based on UPS approach**

Details of Earner	HH	All India (in %)						
		Up to 5000	5001 to 7500	7,501 to 10,000	10,001 to 20,000	20,001 to 50,000	50,001 to 1,00,000	Above one Lakh
No Earner	5.1	51.5	14.1	12.2	14.8	6.8	0.5	0.0
One Earner	48.4	30.4	25.2	18.6	15.7	9.0	1.0	0.1
Two Earner	30.6	13.2	32.2	21	20.4	10.6	2.3	0.3
Three Earner	10.7	5.2	18.4	27.7	28.7	16.4	3.2	0.4
Four and above Earner	5.2	3.6	12.9	20.8	36.9	21.1	3.9	0.8

**2.26** The results reveal that 10.7 per cent households had 3 earning members and out of these 28.7 per cent households have average monthly earnings in the range of Rs. 10,001 to Rs. 20,000 followed by 27.7 per cent households with average monthly earnings in the range of Rs. 7501 to Rs. 10,000.

**2.27** It is also revealed that 5.2 per cent of the households reported having 4 and above earning members. Out of these 36.9 per cent of the households reported having average monthly earnings in the range of Rs. 10,001 to Rs. 20,000. The state of Chhattisgarh has highest (16.5

per cent) households having 4 and above earners followed by Nagaland (12.3 per cent) and Mizoram (12.2 per cent). (Table 10.4, Annexure IV).

#### **Households by Number of Wage Salaried Persons and Average Monthly Earnings**

**2.28** In the present survey, information has been compiled for the first time regarding the households having wage/salaried member vis-a-vis average monthly earnings, as presented in table 2.8. The results reveal that at the All India level 22.7 per cent of the households had wage/salaried persons. Among the households with wage/salaried persons, 29.2

per cent of the households had average monthly earnings in the range of Rs.10, 001-Rs.20,000 followed by 28.1 per cent of the

households with Rs.20,001-Rs.50,000 of average monthly earnings.

**Table 2.8: Households having wage salaried persons by average monthly earnings**

Head	All India (in %)							
	HH	Up to 5000	5001 to 7500	7,501 to 10,000	10,001 to 20,000	20,001 to 50,000	50,001 to 1,00,000	Above one Lakh
<b>Rural</b>	16.4	7.6	17.9	20.2	28.3	22.6	2.9	0.4
<b>Urban</b>	37.9	2.9	8.5	14.8	30.1	34	8.5	1.2
<b>Rural+Urban</b>	22.7	5.4	13.3	17.6	29.2	28.1	5.6	0.8

**2.29** In the rural sector, out of 16.4 per cent households having wage salaried persons, 28.3 per cent of the households had average monthly earnings in the range of Rs.10,001-Rs.20,000 followed by 22.6percent of the households with average monthly earnings in the range of Rs. 20,001-Rs.50,000.

**2.30** In case of urban sector, percentage of households having Wage/salaried persons were more than double (37.9 percent) as compared to rural sector. The variation can also be observed in case of average monthly earnings of urban sector as compared to

overall results of All-India and rural sector. In urban sector, 34 percent of the households recorded having average monthly earnings of Rs. 20,001-50,000 followed by 30.1 percent households in the range of Rs.10,001-Rs20,000 average monthly earnings.

**2.31** Union Territory Chandigarh had maximum (53.1 percent) of the households with wage/salaried persons. The state of Bihar recorded lowest (13.2 per cent) of the households with wage/salaried persons (Table 11, Annexure IV).

## CHAPTER-III

### LABOUR FORCE ESTIMATES

#### **Introduction**

**3.1** Labour Force indicates the supply of labour in the country and is an important input for production of goods & services in the country. The reliable estimates of labour force are important for policy and planning purposes. The Labour Force Participation Rate derived shows the proportion of a country's working-age population that engages actively in the labour market, either by working or looking/searching for work. It provides an indication of the relative size of the supply of labour available to engage in the production of goods and services. The breakdown of the labour force by sector, sex, State/UT, social group and age group wise gives a profile of the distribution of the economically active population within the country to formulate policies and plans for various target population.

**3.2** In our country, the Labour Force Participation Rate for women is quite low as compared to other developed countries.

Based on the experience gained in each round, more and more probing questions for some of the categories of persons especially persons pursuing studies and persons involved in domestic duties are included in the schedule, however, still it is likely that the Labour Force Participation Rate (LFPR) and Worker Population Ratio (WPR) are underestimated due to insufficient probing especially in case of these categories of persons.

**3.3** The present chapter deals with the Labour Force Participation Rate, Worker Population Ratio, Unemployment Rate, Proportion Unemployed estimates and activities pursued by employed persons based on Usual Principal Status approach and Usual Principal and Subsidiary Status approach. All the estimates derived in the present chapter are for the persons aged 15 years and above as was compiled in the previous Annual EUS report also.

### Box 3.1 Concepts & Measurement of Labour Force

#### Concepts of Labour Force

- 1. Labour Force Participation Rate:** - Labour Force Participation Rate (LFPR) is defined as the number of persons in the labour force per 1000 persons.

$$LFPR = \frac{\text{no. of employed} + \text{no. of unemployed persons}}{\text{Total population}} \times 1000$$

- 2. Worker Population Ratio:** - Worker Population Ratio (WPR) is defined as the number of persons employed per 1000 persons.

$$WPR = \frac{\text{no. of employed/Persons}}{\text{Total population}} \times 1000$$

- 3. Proportion Unemployed:** - Proportion Unemployed (PU) is defined as the number of persons unemployed per 1000 persons.

$$PU = \frac{\text{no. of unemployed persons}}{\text{Total population ages 15 +}} \times 1000$$

- 4. Unemployment Rate:** - Unemployment Rate (UR) is defined as the number of persons unemployed per 1000 persons in the labour force (employed & unemployed).

$$UR = \frac{\text{no. of unemployed persons}}{\text{labour force}} \times 1000$$

#### Measurement of Labour Force

In a country where majority of the workers are employed in the unorganized sector and pursuing multiple activities, estimating labour force and its derivatives by a single approach is a difficult task. In such cases no single measure is appropriate to estimate the labour force parameters precisely. As per International practice, Labour Force related parameters can be estimated for both longer reference period and current or shorter reference periods. Accordingly, based on longer reference period, Labour Force related parameters may be derived by the following two different approaches.

- i) Usual Principal Status (UPS) Approach:** - The major time criterion based on the 365 days is used to determine the activity pursued by a person under the usual principal status approach. Accordingly, the major time spent by a person (183 days or more) is used to determine whether the person is in the labour force or out of labour force. A person found unemployed under this approach reflects the chronic unemployment. In the present survey, the usual principal status approach estimates are derived for a moving reference period of last twelve months. For example, if the household is surveyed in January, 2014, the reference period for collection of information is January, 2013-December, 2013.

**ii) Usual Principal and Subsidiary Status (UPSS) Approach:** - The other important approach to measure the labour force parameters is the usual principal & subsidiary status approach. This approach is a hybrid one which takes into consideration both the major time criterion and shorter time period (30 days or more in any economic activity). Thus a person who has worked even for 30 days or more in any economic activity during the reference period of last twelve months is considered as employed under this approach. In this approach, the reference period is same as taken in the usual principal status approach (UPS). This approach is also called the usual status approach.

### Concepts of Labour Force

**3.4** The results of Labour Force Participation rate and its derivatives are compiled under two approaches namely Usual Principal Status (UPS) approach

and Usual Principal and Subsidiary Status (UPSS) approach which are based on longer reference period of one year.

### Labour Force Participation Rate (LFPR)

**Table 3.1: LFPR based on UPS & UPSS approach for persons aged 15 years & above All India (in %)**

Approach	Rural				Urban				Rural+ Urban			
	M	F	T	P	M	F	T	P	M	F	T	P
<b>UPS</b>	77.3	26.7	51.1	53	69.1	16.2	41.2	43.5	75	23.7	48	50.3
<b>UPSS</b>	78	31.7	52.2	55.8	69.1	16.6	41.2	43.7	75.5	27.4	48.8	52.4

**3.5** The results of LFPR are presented in the form of proportions for persons aged 15 years & above only (Table 3.1). The results are compiled for all States/UT's, report. In order to derive the absolute figures, the proportions may be multiplied

with the corresponding population figure of same age-group/sector/gender.

**3.6** At the All India level, the Labour Force Participation Rate (LFPR) based on Usual Principal Status approach was estimated at 50.3 percent or 503 persons out of

1000 persons aged 15 years & above. The present survey has estimated the various Labour Force indicators for the third gender namely 'transgender' also. The gender wise estimates derived shows that 75 per cent of the males, 23.7 per cent of the females and 48 per cent of the transgenders aged 15 year and above were either working or looking/available for work. Among States and UT's, Chhattisgarh recorded the highest LFPR of 67.9 per cent and the lowest 36.1 per cent was recorded in Lakshadweep (Table 12 Annexure IV).

**3.7** While analysing the sector-wise LFPR estimates, it may be seen from the table that in rural sector the LFPR was estimated to be 53 per cent whereas in urban sector the same was 43.5 per cent at the All India level. One of the reasons for lower LFPR in urban areas was perhaps the low female participation rate of 16.2 per cent. In rural and urban sector, the

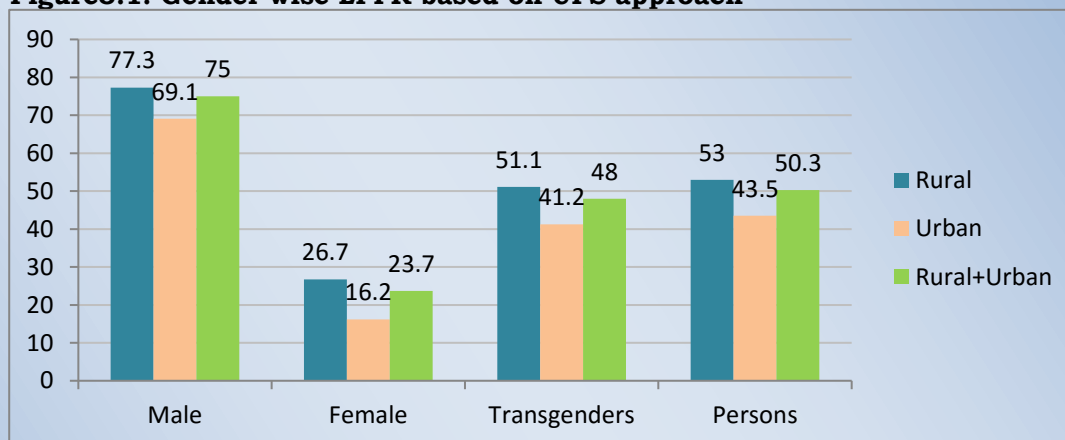

male participation rate was at 77.3 per cent and 69.1 per cent respectively. As compared to male LFPR, female LFPR was very low for both rural and urban sectors(Also see Box 3.2).The LFPR based on UPS approach for transgenders was 51.1 per cent and 41.2 per cent in rural and urban areas respectively.

**3.8** Under the UPSS approach, the LFPR at the All India level was estimated to be 52.4 per cent. Under this approach, the persons employed even for 30 days and above are also taken into consideration and counted as employed. This approach is important to understand the contribution made by the seasonal workers in the production of goods and services in the country. Many persons categorised as not in labour force or unemployed based on major time criterion are counted as employed under this approach, if they have worked for 30 days and above during the one year reference period.

### Box 3.2: In Depth: Female Labour Force Participation Rate (LFPR)

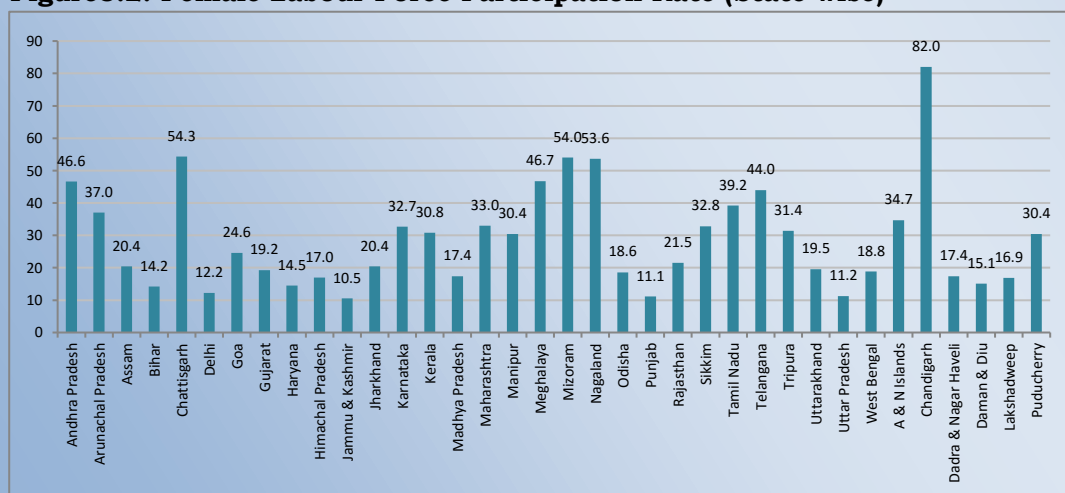

The low female Labour Force Participation Rate (LFPR) is a cause of concern for the economy as females constitute a significant proportion of the total working age population. In the World Economic Forum 'Global Gender Report 2015' India is ranked 139 among 145 countries on the Economic participation and opportunity sub index and in the rankings by indicator, India's rank in Female LFPR is 136 among 145 countries. The 5<sup>th</sup> EUS survey results reveal that the female LFPR of 23.7 per cent at All India (Rural+Urban) level was significantly lower than the LFPR of 75 per cent and 48 percent among males and transgenders respectively. The LFPR for females in urban areas is very low at 16.2 per cent as compared to 26.7per cent in rural areas.

**Figure3.1: Gender wise LFPR based on UPS approach**

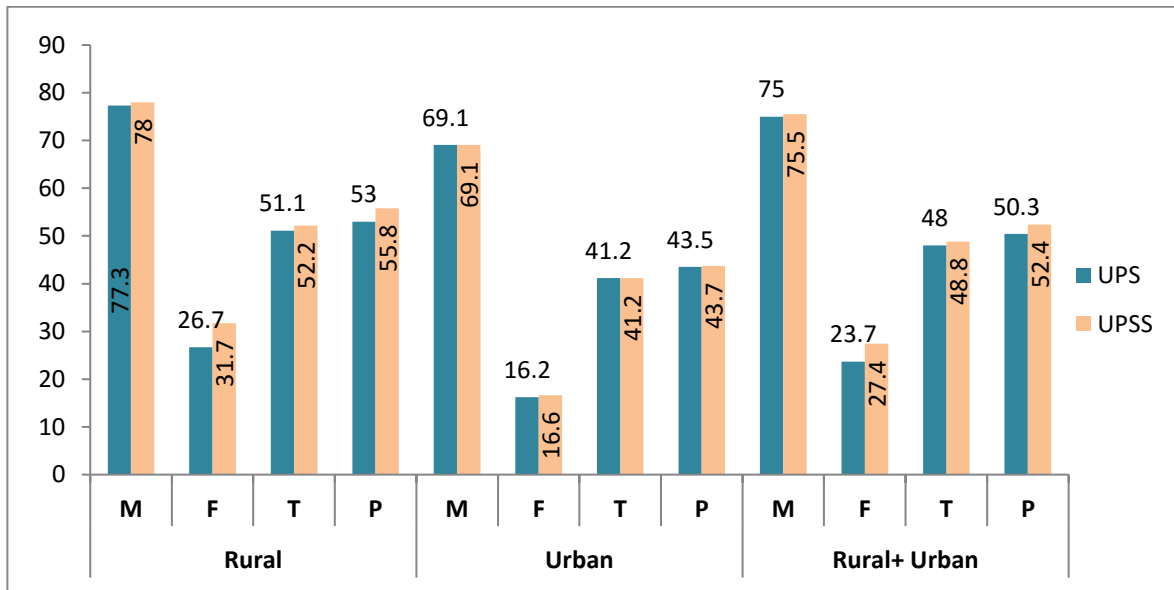

There are large interstate variations in the female LFPR. The North Eastern and Southern States, in general, display high female LFPR as compared to low levels in Northern States. Chandigarh had the lowest female LFPR of 8.2 per cent followed by J&K (10.5 per cent), Punjab (11.1 per cent), Uttar Pradesh (11.2 per cent) and Delhi (12.2 per cent). Chhattisgarh has the highest female LFPR of 54.3 per cent followed by Mizoram (54 per cent), Nagaland (53.6 per cent), Meghalaya (46.7 per cent) and Andhra Pradesh (46.6 per cent).

**Figure3.2: Female Labour Force Participation Rate (State wise)**

**Figure 3.3: Labour force participation rate based on UPS and UPSS approach**

**3.9** While comparing the results of UPSS approach with UPS approach, it may be seen that for male category, the LFPR under the UPSS approach was higher than that under UPS approach by only 0.5 per cent. Whereas in case of females the LFPR under UPSS approach was higher than LFPR under UPS approach by 3.7 per cent at the All India level. It implies that many females who were primarily not a part of labour force based on major time criterion had worked for few months during the peak season or at the time of availability of work at their place.

### **Worker Population Ratio (WPR)**

**3.10** The second important parameter of the labour force is the Worker Population Ratio. The WPR signifies the proportion of workers/employed persons in the total population for the specific age group. As stated earlier, all the labour force related parameters are derived for the persons aged 15 years and above. The Worker Population Ratio based on Usual Principal Status approach and Usual Principal and Subsidiary Status approach for persons aged 15 years and above at the All India level is given below in Table 3.2.

**Table 3.2: Worker Population Ratio based on UPS and UPSS approach for persons aged 15 years & above All India (in %)**

Approach	Rural				Urban				Rural + Urban			
	M	F	T	P	M	F	T	P	M	F	T	P
<b>UPS</b>	74.1	24.6	50.0	50.4	66.8	14.3	36.9	41.4	72.1	21.7	45.9	47.8
<b>UPSS</b>	75.7	30.2	51.9	53.9	67.1	14.8	36.9	41.8	73.3	25.8	47.2	50.5

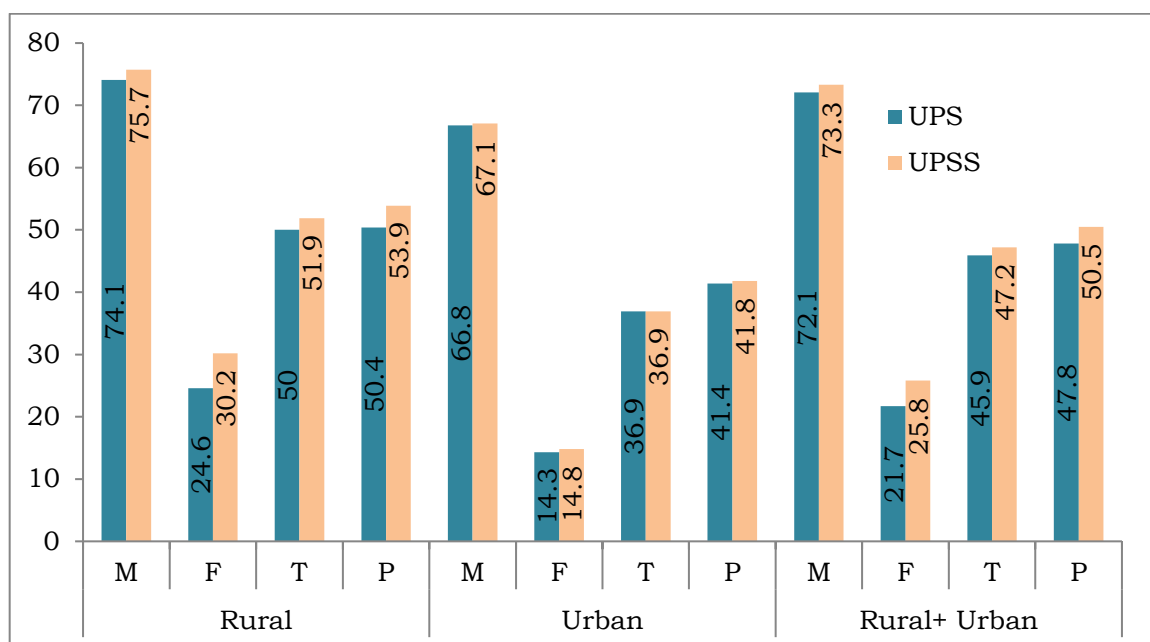

**3.11** The WPR was estimated to be 47.8 per cent at the All India level based on Usual Principal Status Approach or in other words 47.8 per cent of persons aged 15 years and above were employed at All India level based on major time criterion approach. In case of gender wise classification of results, 72.1 per cent of the males, 21.7 per cent of the females and 45.9 per cent of the transgenders aged 15 years and above were employed based on UPS approach. Among States and UTs, the WPR based on UPS approach was the highest in the State of Chhattisgarh (66.6 per cent) and lowest for Lakshadweep (30.3 per cent). (Table 13, Annexure IV)

**3.12** In rural sector, 50.4 percent of the persons aged 15 years and above were employed whereas in urban sector 41.4 per cent of the persons aged 15 years & above were employed based on UPS approach.

**3.13** It may be seen from table 3.2 that the WPR based on the UPSS approach was estimated at 50.5 per cent at the All India level. The gender wise distribution of results show that 73.3 per cent of the males, 25.8 per cent of the females and 47.2 per cent of the transgenders aged 15 years and above were employed based on UPSS approach at the All India level.

**Figure 3.4: Worker Population Ratio based on UPS and UPSS approach**

**3.14** At sectoral level, WPR was estimated to be 53.9 per cent and 41.8 per cent in the rural and urban sector respectively under the UPSS approach. The WPR for females in rural areas based on UPSS approach was higher by 5.6 per cent as compared to that based on UPS approach (Table 3.2)

### Unemployment Rate (UR)

**3.15** The third important parameter of the labour force is the Unemployment Rate. The unemployment rate reflects the portion of the labour force which was available for work during the

given reference period but did not get work. The unemployment rate derived based on Usual Principal Status approach is also sometimes called as “chronic unemployment” as the persons remained unemployed for major part of the period for which they were available. The Unemployment Rate in the present report has been calculated for Usual Principal Status approach and Usual Principal & Subsidiary Status approach. The UR based on UPS and UPSS approaches at the All India level is given below in Table 3.3:

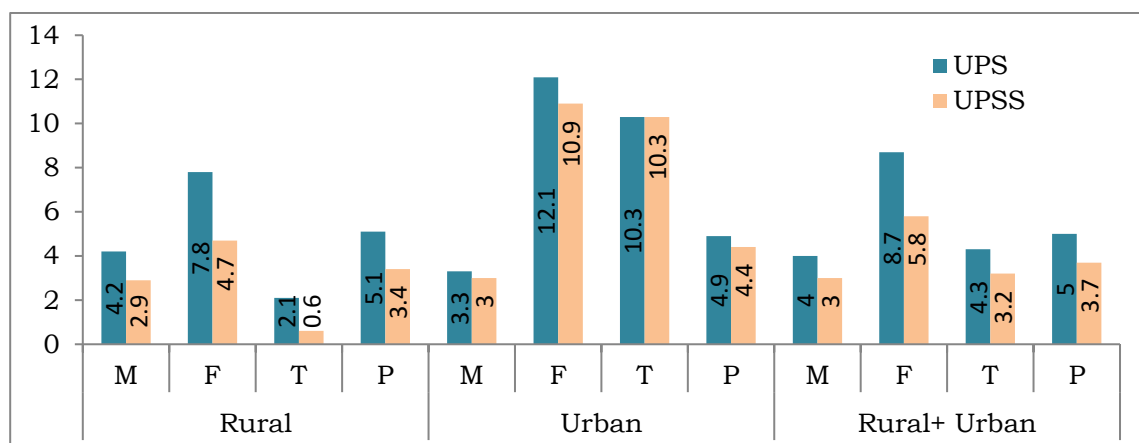

**Table 3.3: Unemployment Rate based on UPS & UPSS approaches for persons aged 15 years & above**

Approach	Rural				Urban				Rural+ Urban			
	M	F	T	P	M	F	T	P	M	F	T	P
UPS	4.2	7.8	2.1	5.1	3.3	12.1	10.3	4.9	4.0	8.7	4.3	5.0
UPSS	2.9	4.7	0.6	3.4	3.0	10.9	10.3	4.4	3.0	5.8	3.2	3.7

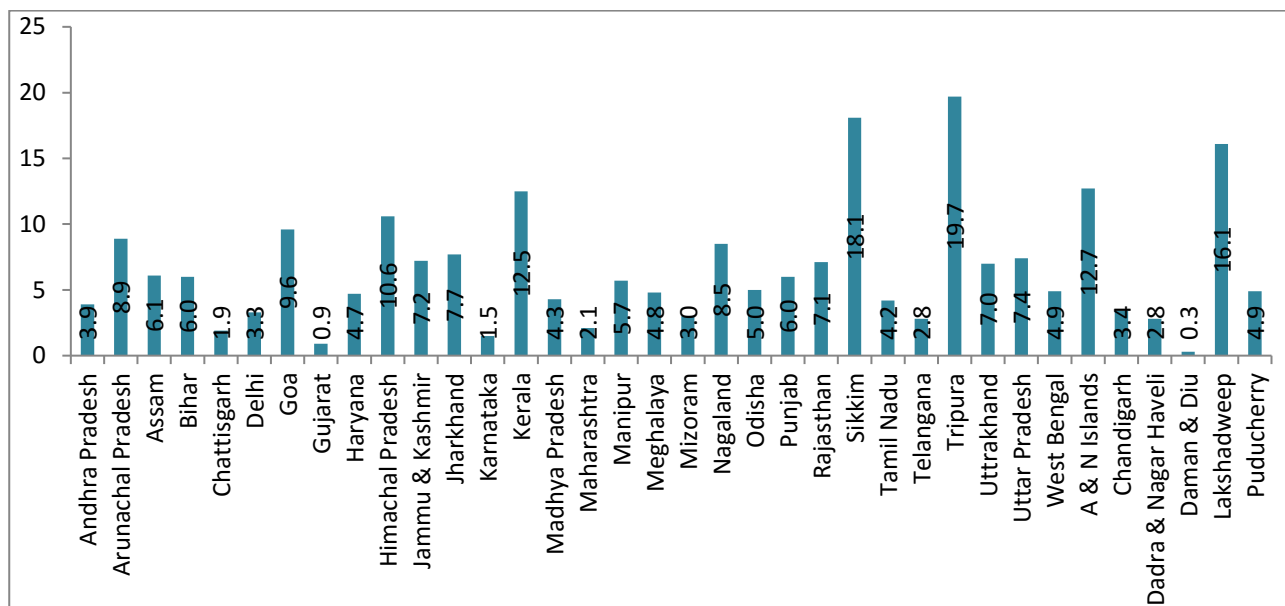

**3.16** The Unemployment Rate based on Usual Principal Status approach was estimated to be 5 per cent at the All India level or in other words about 5 per cent of the persons who were available for work during the reference period could not get work and remained unemployed. Among the State and UT's unemployment rate exhibits wide variations. Tripura had the highest unemployment rate of 19.7per cent followed by Sikkim (18.1 per cent), Lakshadweep (16.1 per cent), A&N Islands (12.7 per cent) and Kerala (12.5per cent). Daman& Diu had the lowest

UR of 0.3 per cent followed by Gujarat (0.9 per cent), Karnataka (1.5per cent), Chhattisgarh (1.9 per cent) and Maharashtra (2.1per cent) (Table 14, Annexure IV). The Unemployment Rate for females was observed to be higher than the males across sectors. At the All India level, the UR for females at 8.7 per cent was more than double as compared to 4 per cent UR for male counterparts. The unemployment rate for transgenders was estimated to be 4.3 per cent at the All India level based on UPS approach.

**Figure 3.5: Unemployment Rate based on UPS & UPSS approach**

**Figure 3.6: State/ UT wise Unemployment rate based on UPS approach**

**3.17** In the rural sector, based on Usual Principal Status approach unemployment rate was 5.1 per cent whereas in urban sector, the same was 4.9 per cent at the All India level. In case of urban females the UR was significantly high at 12.1 per cent at the All India level as compared to 3.3 per cent for urban males and rural females (7.8 per cent). Similarly, the unemployment rate among transgenders in urban areas was also high at 10.3 per cent as compared to UR of 2.1 per cent for transgenders in rural areas.

**3.18** The Unemployment Rate based on Usual Principal & Subsidiary Status approach was estimated to be 3.7 per cent at the

All India level. The unemployment rate for males was 3 per cent whereas for females, the same was 5.8 per cent. The unemployment rate for transgenders based on UPSS approach was 3.2 per cent at the All India level. At the sectoral level, the unemployment rate in rural sector was estimated to be 3.4 per cent whereas in urban sector, it was 4.4 per cent at the All India level based on UPSS approach (Table 3.3).

### **Proportion Unemployed (PU)**

**3.19** The other important parameter under the labour force is proportion unemployed. As discussed earlier, it is defined as a proportion of unemployed persons in the total population, whereas

unemployment rate is defined as a proportion of unemployed persons in the labour force. The Proportion Unemployed has been derived for Usual Principal Status approach

and Usual Principal & Subsidiary Status approach in this report. The PU based on these two approaches is given below in Table 3.4

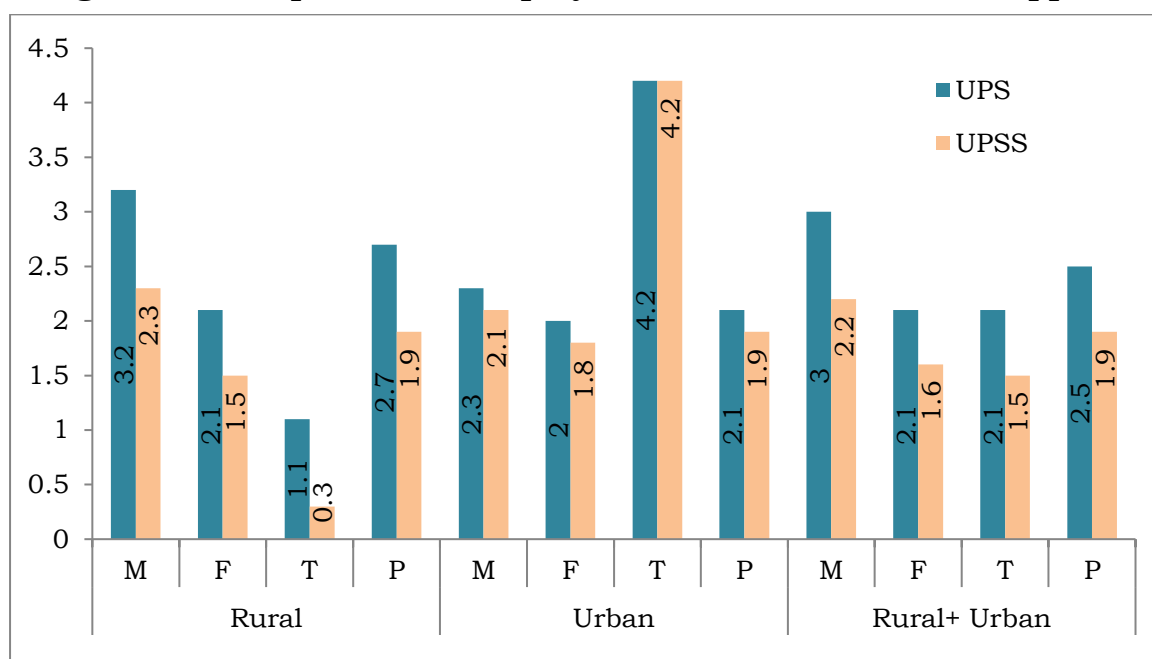

**Table 3.4: Proportion Unemployed based on UPS & UPSS approaches for persons aged 15 years & above All India (in %)**

Approach	Rural				Urban				Rural+ Urban			
	M	F	T	P	M	F	T	P	M	F	T	P
UPS	3.2	2.1	1.1	2.7	2.3	2.0	4.2	2.1	3.0	2.1	2.1	2.5
UPSS	2.3	1.5	0.3	1.9	2.1	1.8	4.2	1.9	2.2	1.6	1.5	1.9

**3.20** The Proportion Unemployed based on Usual Principal Status approach was estimated to be 2.5 per cent at the All India level. In case of males, the PU was 3 per cent whereas for female category

the same was 2.1 per cent. The proportion unemployed for transgenders was estimated to be 2.1 per cent. At sectoral level, the PU was 2.7 per cent in rural and 2.1 per cent in the urban sector.

**Figure 3.7: Proportion Unemployed based on UPS & UPSS approach**

### Activity-wise distribution of the population

**3.21** The persons aged 15 years and above are classified based on various activities pursued by them during a longer reference period of one year. The workers/employed persons are also classified based on the economic activity pursued by them on the basis of National Industrial Classification 2008 (NIC 2008) at the section level. The workers or employed persons are also classified among occupations on the basis of National Classification of Occupations (NCO 2004).

### Activity-wise distribution of persons

**3.22** Based on the Usual Principal Status approach, the main activities pursued by the persons are as follows:

- i) worked in household enterprise as an own account worker;
- ii) worked in household enterprise as an employer;

- iii) worked as helper in household enterprise (unpaid family worker);
- iv) worked as permanent regular salaried/ wage employee;
- v) worked as contract worker;
- vi) worked as casual wage labour in public works;
- vii) Worked as casual wage labour in other types of work; private work excluding agriculture & allied work.
- viii) Worked as casual wage labour in agriculture & allied sectors.
- ix) did not work but was seeking and/or available for work;
- x) attended educational institution;
- xi) attended domestic duties only;
- xii) Rentiers, pensioners, remittance recipients, etc.;
- xiii) not able to work due to disability;
- xiv) Others (begging, prostitution, etc.).

The classification as mentioned above from sr. no. (i) to (ix) belongs to the labour force and remaining from sr. no. (ix) to (xiv) belongs to the non-labour force category under the Usual Principal Status approach.

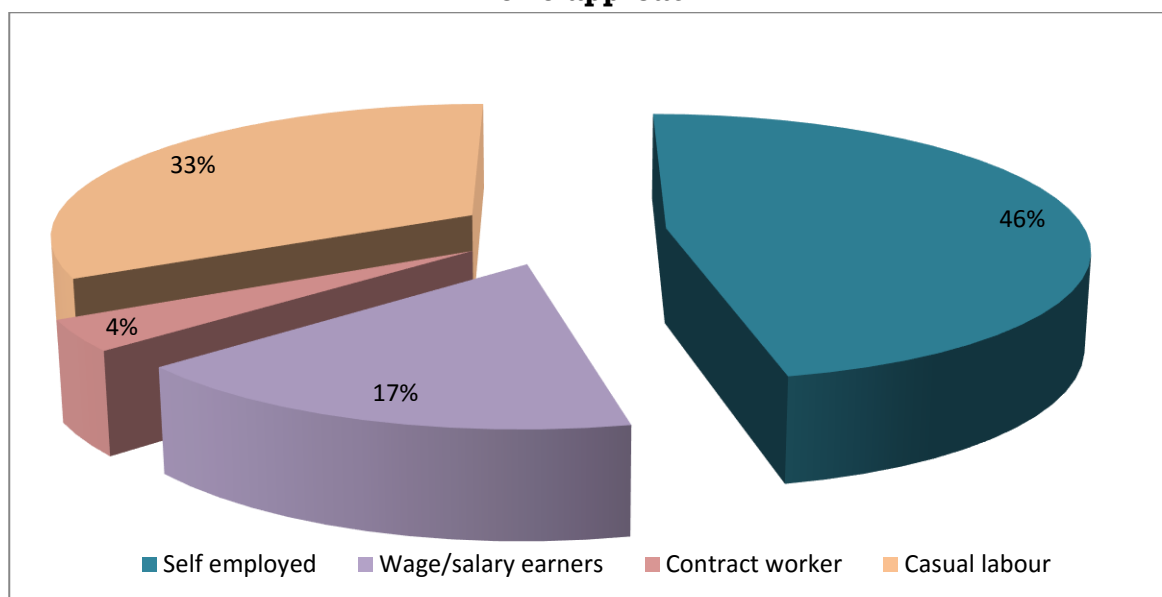

**Table 3.5: Distribution of employed persons among different categories of employment based on UPS & UPSS approach (in %)**

Approach	(All India) Rural+ Urban			
	Self employed	Wage/salary earners	Contract worker	Casual labour
UPS	46.6	17.0	3.7	32.8
UPSS	47.2	16.2	3.5	33.1

**3.23** The distribution of employed persons by categories of employment, namely, self employed, wage/salary earners, contract workers and casual labour based on UPS & UPSS approach is presented in Table 3.5. The survey results show that majority of the persons i.e. 46.6 per cent of the employed persons were reported to be self employed followed by 32.8 per cent as casual labour, 17 per cent as wage/salary earners and remaining 3.7 per cent as contract workers based on Usual Principal Status approach. Under the Usual Principal & Subsidiary Status approach also a similar pattern as observed in UPS approach was evident. State/UT wise distribution of employed persons by categories of employment is given in (Table 20, Annexure IV). Among the State/UT's, Arunachal Pradesh had the highest 81.2 per cent of the workers as self employed as compared to the lowest 15.7 per cent of the workers as self-

employed in Puducherry. Self employment was the dominant form of employment in all the States/UT's barring UT's of Chandigarh, A & N Islands, Lakshadweep and Puducherry the States of Delhi, West Bengal and Goa. All the Southern States except Karnataka exhibit high levels of casual labour employment. Andhra Pradesh had the highest 48.5 per cent of workers engaged in casual labour followed by Tamil Nadu (47.3 per cent), Kerala and West Bengal (43.8 per cent), Telangana (43.3 per cent) and Puducherry (40.3 per cent) (Table 20, Annexure IV). Out of a total of 36 States/UT's, 19 States/UT's had less than one fifth of the workers employed on regular wage salary basis. Chandigarh had the highest 54.2 per cent of the workers employed on regular wage/salary basis while Bihar had the lowest 9.7 per cent (Table 20, Annexure IV).

**Figure 3.8: Distribution of Employed persons by various activities under UPS approach**

**3.24** While analyzing the results at gender level, the survey results reveal that for male category, self employment was the dominant categories in which majority of the male persons were employed. Under the self employment category, 48.4 per cent of the male were employed followed by 30.2

per cent under the casual labour, 17.6 per cent under wage/salary earners and remaining 3.8 per cent as contract workers based on Usual Principal Status approach. The distribution of employed persons for male category based on UPS and UPSS classification is given below in Table 3.6.

**Table 3.6: Distribution of employed persons (male) among different categories of employment based on UPS & UPSS approach (All India) (in %) Rural+ Urban**

Approach	Self employed			Wage/salary earners			Contract worker			Casual labour		
	M	F	T	M	F	T	M	F	T	M	F	T
<b>UPS</b>	48.4	39.9	44.1	17.6	14.8	19.6	3.8	3.1	4.9	30.2	42.1	31.4
<b>UPSS</b>	48.6	42.9	44.9	17.4	12.5	19.0	3.8	2.7	4.7	30.2	41.9	31.5

**3.25** In case of females, casual labour was the dominant form of

employment. At the All India level, 42.1 per cent of the female work

force was employed as casual labour followed by 39.9 per cent under self employment, 14.8 per cent as wage/salary earners and remaining 3.1 per cent as contract worker based on Usual Principal Status approach. The distribution of female employed persons based on UPS and UPSS classification is given above in Table 3.6.

**3.26** In case of transgenders also self-employment was the main form of employment under which 44.1 per cent of the transgenders were employed followed by 31.4 per cent as casual labour, 19.6 per cent as wage and salaried earners and remaining 4.9 per cent as contract workers. The

distribution of transgender employed persons based on UPS and UPSS classification is given above in Table 3.6.

### **Industry wise distribution of workers**

**3.27** The employed persons are further classified based on the economic activity pursued by them in different industry sections. The results are compiled based on National Industrial Classification 2008. The results at State/UT level are compiled at section level (A-U) of NIC 2008 classification. However, at the All India level, the survey results are presented at 2 digit level of NIC 2008 classification.

**Table 3.7: Sector wise distribution of employed persons based on NIC 2008 classification (in %)**

<b>All India</b>			
<b>Approach</b>	<b>Primary sector</b>	<b>Secondary sector</b>	<b>Tertiary sector</b>
Rural + Urban			
UPS	46.1	21.8	32
UPSS	47.3	21.9	31
Rural			
UPS	58.5	19.5	22
UPSS	59.3	19.7	21.1
Urban			
UPS	7.8	28.9	63.1
UPSS	7.9	29.0	63.0

**3.28** Table 3.7 presents percentage distribution of employed persons (Rural+Urban,

Rural and Urban) based on NIC 2008 classification. The results reveal that under UPS approach,

majority of the persons were employed in primary sector i.e agriculture, forestry & fishing and mining & quarrying or Section A & Section B of NIC 2008 classification. In the primary sector, 46.1 per cent of the workers were estimated to be employed followed by 32 per cent in the tertiary sector and the remaining 21.8 per cent in the secondary sector i.e. manufacturing and construction sector (Section C and Section F) based on Usual Principal Status approach.

**3.29** It may be observed from the above Table (3.7) that similar trend was evident under Usual Principal & Subsidiary Status approach.

**3.30** The distribution of employed persons based on NIC 2008 classification in rural sector is presented in Table 3.7. The results reveal that in rural sector, 58.5 per cent of the employed persons were engaged in primary sector, followed by 22 per cent in the tertiary sector and remaining 19.5 per cent in the secondary sector based on Usual Principal Status approach.

**3.31** As can be seen from Table 3.7, in the urban sector, majority of the employed persons were in tertiary sector. Based on Usual Principal Status approach, 63.1 per cent of the employed persons were in tertiary sector, followed by 28.9 per cent in the secondary sector and remaining 7.8 per cent in the primary sector.

### **Under-Employment**

**3.32** In order to find out whether the persons available for 12 months during the reference period are fully employed or partially employed, special tables have been generated in this report. The persons who were available for 12 months during the reference period are categorized into following four groups based on Usual Principal & Subsidiary Status approach.

- i) Worked for 12 months or fully employed
- ii) Worked for 6-11 months (partially employed)
- iii) Worked for 1-5 months (partially employed)
- iv) Did not get any work and remained unemployed throughout the year.

**Table 3.8: Percentage distribution of persons available for 12 months based on UPSS approach**

Group	All India (in %)		
	Rural	Urban	Rural + Urban
Worked for 12 months	52.7	82.1	60.6
Worked for 6-11 months	42.1	13.2	34.4
Worked for 1-5 months	1.4	0.4	1.1
Did not get any work	3.8	4.3	3.9

**3.33** The survey results reveal that 60.6 per cent of the persons who were available for 12 months were able to get the work throughout the year at the All India level as presented in Table 3.8. However, in rural areas, only 52.7 per cent of the persons who were available for 12 months were able to get work for 12 months. 3.9 per cent of the persons who were available for work throughout the year could not get any work at the All India level. The results have been compiled at State/UT, gender and sectoral level at (Table 27 Annexure IV)

**3.34** The present survey has made an attempt to capture data on a number of other variables of interest related to employment and unemployment. The data has been collected on parameters like methods adopted to seek work by the unemployed, reasons for unemployment among graduates

and post graduates, type of job contract, availability of paid leave & social security benefits and social security benefits by different schemes. Comprehensive data on these variables serves a very useful purpose in assessing the employment unemployment situation in a holistic manner.

#### **Employed Persons by Average Monthly Earnings**

**3.35** The present survey has classified the various categories of employed persons according to average monthly earnings. The data are presented in Table 3.9. At the All India level, a majority 67.5 per cent of the self employed workers had average monthly earnings up to Rs 7500. In Odisha, Chattisgarh and West Bengal, more than 80 per cent of the self employed workers earned up to an average of Rs 7500 monthly. Delhi had the lowest 9.7 per cent of self employed workers in

the low monthly earnings bracket of up to Rs 7500. (Table 29, Annexure IV) At the All India level, 65 per cent of the self employed males had monthly average earnings up to Rs 7500 as against 85.5 per cent of self employed females and 64.6 per cent of self-employed transgenders. Only 0.1 per cent of self employed were estimated to have earnings above Rs 1 lakh. At the All India level, 57.2 per cent i.e. more than half of the regular wage/salaried workers earned monthly average earnings of up to Rs

10,000. Whereas, 23.6 per cent of regular wage/salaried workers fall in the monthly average earnings bracket Rs 10,001 to Rs 20,000 followed by 19.5 per cent in Rs 5001-Rs 7500 and 19 per cent in Rs 7501-Rs 10,000. Contract workers and Casual workers were predominantly in the low earnings bracket of up to Rs 7500. 66.4 per cent of the contract workers and 84.3 per cent of the casual workers had average monthly earnings of up to Rs 7500.

**Table 3.9: Self Employed/Regular wage salaried/Contract/Casual Workers according to Average Monthly Earnings (in %)** **All India**

	<b>Self Employed</b>	<b>Regular Wage/salaried</b>	<b>Contract workers</b>	<b>Casual labour</b>
Persons in labour Force	46.6	17.0	3.7	32.8
Up to Rs. 5,000	41.3	18.7	38.5	59.3
Rs. 5,001-Rs7,500	26.2	19.5	27.9	25.0
Rs7,501-Rs 10,000	17.4	19.0	20.3	12.0
Rs10,001-Rs20,000	11.1	23.6	11.0	3.5
Rs 20,001-Rs 50,000	3.5	17.7	2.1	0.3
Rs 50,001-Rs 1,00,000	0.4	1.4	0.1	0.0
Above Rs 1,00,000	0.1	0.2	0.0	0.0

### **Unemployed Persons by methods adopted to seek work**

**3.36** Table 3.10 presents data on unemployed persons by methods adopted to seek work based on UPS

approach. It shows that at the All India level, majority of persons (33.5 per cent) used more than two methods to seek work, followed by,

through friends & relatives (24.1 per cent), application made in response to advertisement (23.7 per cent), through employment exchange (4.3 per cent) and so on. Thus informal method of job search involving a network of friends and relatives was one of the significant methods of job search adopted by the unemployed. Workers in the urban sector, however, rely on more formal methods of job search as the 'Application made in response to advertisement' was adopted by a majority (33.5 per cent) of the unemployed persons. The unemployed in the rural sector

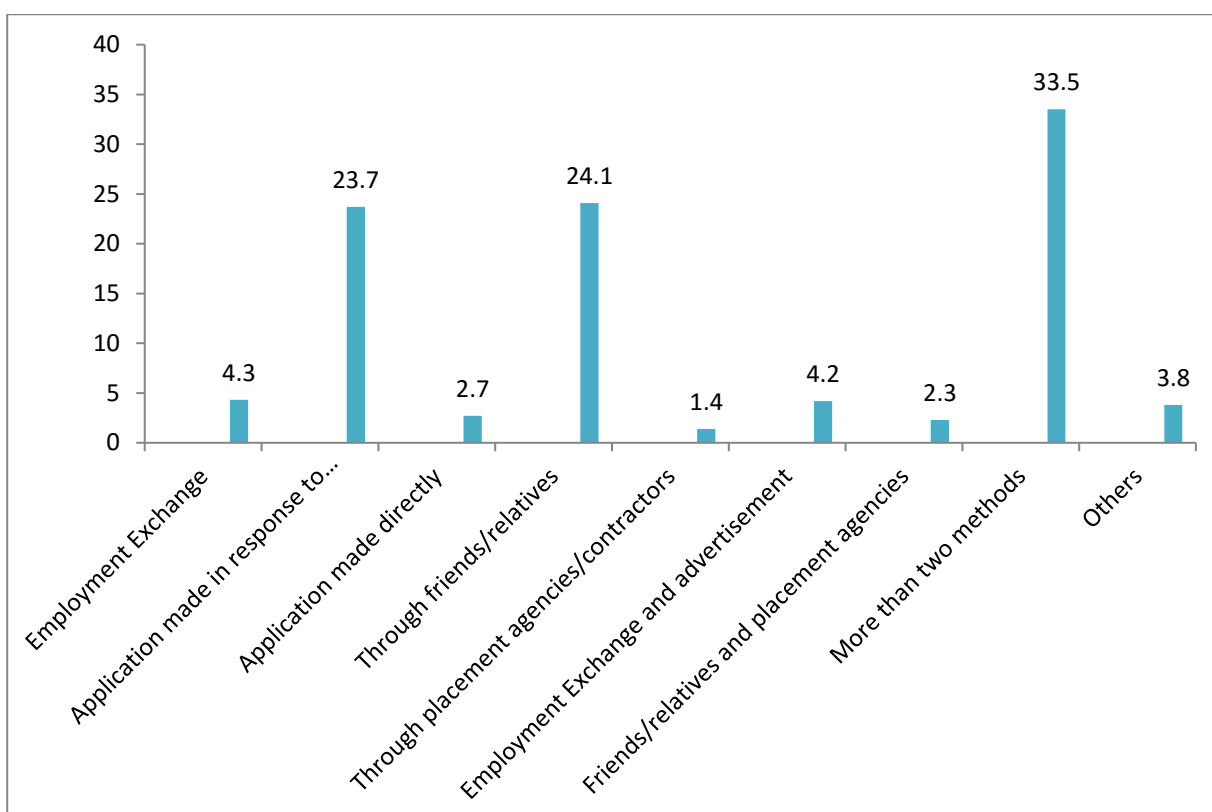

mainly adopt multiple methods of seeking work (35.2 per cent) followed by through network of friends and relatives (25.3 per cent) and application in response to advertisement (20.7 per cent). Gender wise analysis reveals that at the All India level, among the unemployed persons, the percentage of females seeking work through employment exchange was highest at 5.1 per cent as compared to 3.9 per cent for males and just 2.5 per cent for transgenders. Further details on methods adopted are presented in Table 3.10 (Table 33, Annexure IV).

**Table 3.10: Unemployed persons aged 15 years & above by methods adopted to seek work based on UPS approach**

**Figure 3.9: Unemployed Persons by methods adopted to seek work (in %).**

### **Unemployed Persons (Graduates and Post Graduates) by reasons of Unemployment**

**3.37** In India, it is observed that the unemployment rate goes up with the level of Education. High unemployment rate among graduates and post graduates is a serious issue and to address it effectively, a clear understanding of the underlying factors is required. To this effect, this survey also collected the data on reasons for unemployment from the unemployed graduates and post graduates. Table 3.11 provides the

details of reasons for unemployment as given by unemployed graduates and post graduates. It reveals that for graduates and Post graduates alike the main reason for unemployment was non availability of jobs matching with education/skill and experience. This clearly brings out the prevalence of skill mismatch in the labour market which renders even highly qualified individuals jobless. At the All India level, 58.3 per cent of unemployed graduates and 62.4 per cent of unemployed

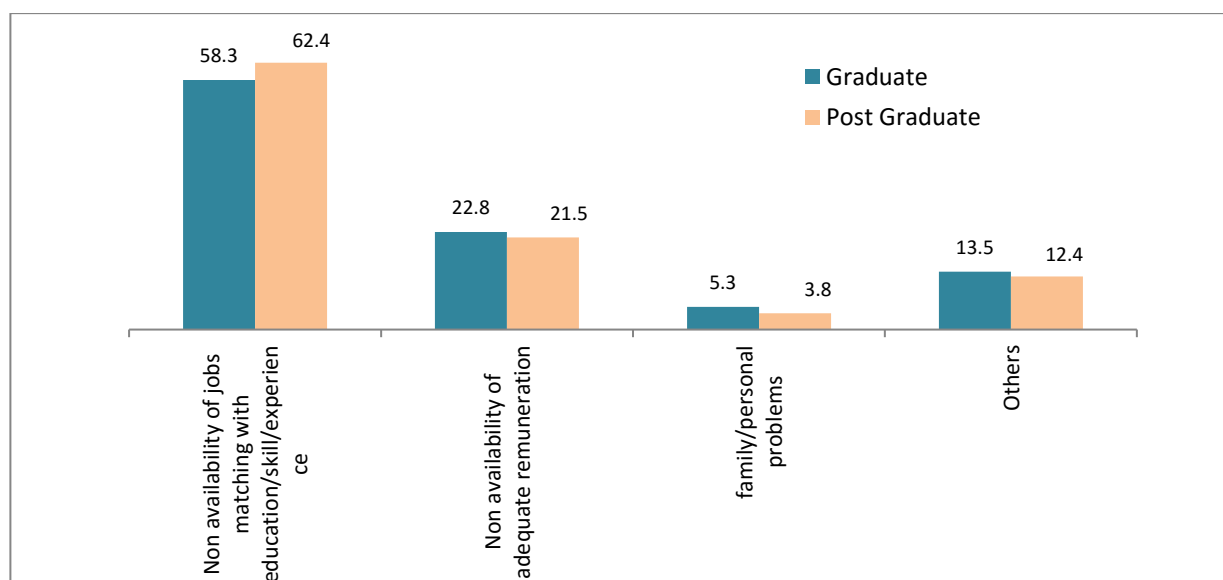

post graduates cited non availability of jobs matching with education/skill and experience as the main reason for unemployment followed by non availability of adequate remuneration cited by 22.8 per cent of graduates and 21.5 per cent of post graduates. Non availability of jobs matching

skills/education and experience continues to be the dominant reason for unemployment for graduates and post graduates across rural and urban sector also followed by non availability of adequate remuneration( Table 34 & 35, Annexure IV).

**Table 3.11: Unemployed persons having graduate/post graduate level qualification aged 15 years & above by reasons of unemployment All India (in %)**

Reasons	Graduate			Post Graduate		
	Rural	Urban	Rural+Urban	Rural	Urban	Rural+Urban
<b>Non availability of jobs matching with education/skill/experience</b>	55.9	64.0	58.3	58.5	68.7	62.4
<b>Non availability of adequate remuneration</b>	25.1	17.5	22.8	24.8	16.0	21.5
<b>family/personal problems</b>	5.5	5.0	5.3	3.7	4.0	3.8
<b>Others</b>	13.5	13.5	13.5	13.0	11.3	12.4

**Figure 3.10: Unemployed persons having graduate/post graduate level qualification aged 15 years & above by reasons of unemployment (in%)**

### Workers by type of job contract

**3.38** Table 3.12 provides data on the status of job contract of regular wage/salaried, casual workers and contract workers. The data reveals that at the All India level 64.9 per cent of the regular wage/ salaried workers, 67.8 per cent of the contract workers and 95.3 per cent of the casual workers did not have a written job contract. 27 per cent of the regular wage/salaried and 11.5 per cent of the contract workers had written job contract of more than three years. Sector wise analysis shows that the percentage

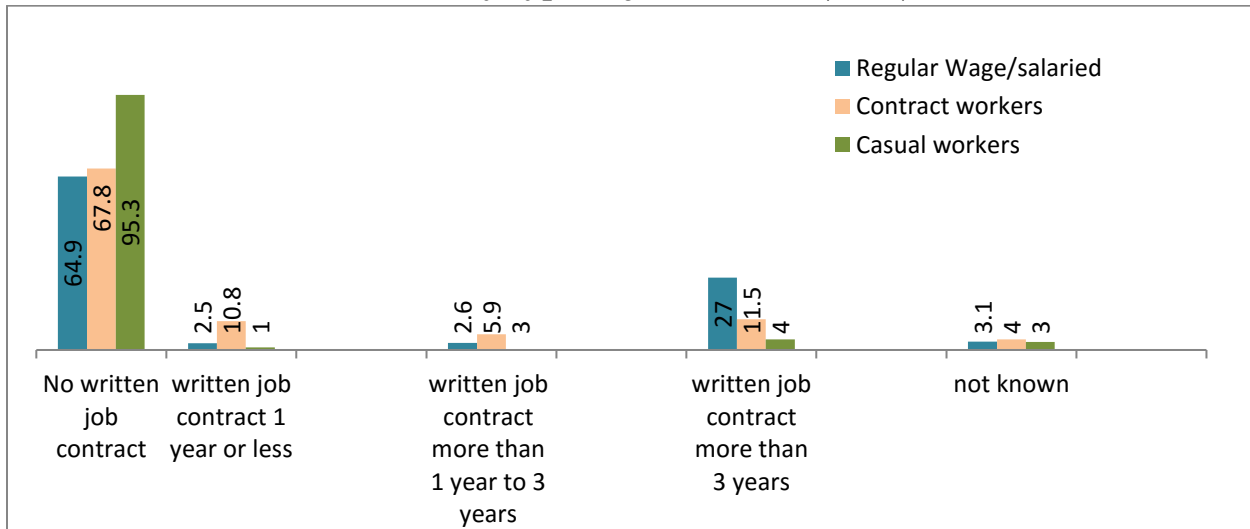

of workers with no written job contracts was higher in urban sector as compared to rural sector for both the regular wage/salaried and contract workers category. In the urban sector, 66.1 per cent of the regular wage/salaried workers had no written contract as compared to 63.7 per cent in the rural sector. Similarly 70.3 per cent of the contract workers in the urban sector had no written job contract as compared to 66.2 per cent in the rural sector (Table 37, 38 & 39 Annexure IV).

**Table 3.12: Regular wage/salaried, contract and casual workers aged 15 years & above by type of job contract All India (in %)**

Type of job contract	Regular Wage/Salaried			Contract Workers			Casual workers		
	R	U	R + U	R	U	R + U	R	U	R + U
No written job contract	63.7	66.1	64.9	66.2	70.3	67.8	95.6	94.2	95.3
written job contract 1 year or less	3.0	1.9	2.5	11.6	9.4	10.8	0.9	1.6	1.0
written job contract more than 1 year to 3 years	2.8	2.3	2.6	4.6	8.1	5.9	0.3	0.3	0.3
written job contract more than 3 years	26.8	27.2	27.0	13.2	8.8	11.5	0.4	0.6	0.4

### Workers by paid leave and availing social security benefits

**3.39** Conditions of employment like leave benefits and social security availed by the workers are crucial to assess the extent of informality in the employment. The National Commission for Enterprises in Unorganised Sector (NCEUS) has also made an important distinction between organized or formal and unorganised or informal employment as follows: “Unorganised workers consist of those working in the unorganised enterprises or households, excluding regular workers with social security benefits, and the workers in the formal sector without any employment/ social security benefits provided by the employers”. Table

3.13 presents data on percentage of workers except self-employed who received paid leave and availed social security benefits. It shows that at the All India level, just 20.6 per cent of workers except self employed received paid leave and 21.6 per cent availed social security benefits. A majority 71.2 per cent of workers were not eligible for social security benefits thus indicating vast informalisation of employment in the country. The sector wise analysis reveals that the percentage of persons availing social security benefits in urban areas (32.4 per cent) was double as compared to that in rural areas (16 per cent). At the All India level, 74 per cent of female workers were estimated to be not eligible for social security

benefits as compared to 70.4 per cent males and 67 per cent for transgenders. In the category of ‘not eligible for social security benefits’, the gap between rural males and females was wider as compared to urban males and females. While 75.8 per cent and 79.3 percent of

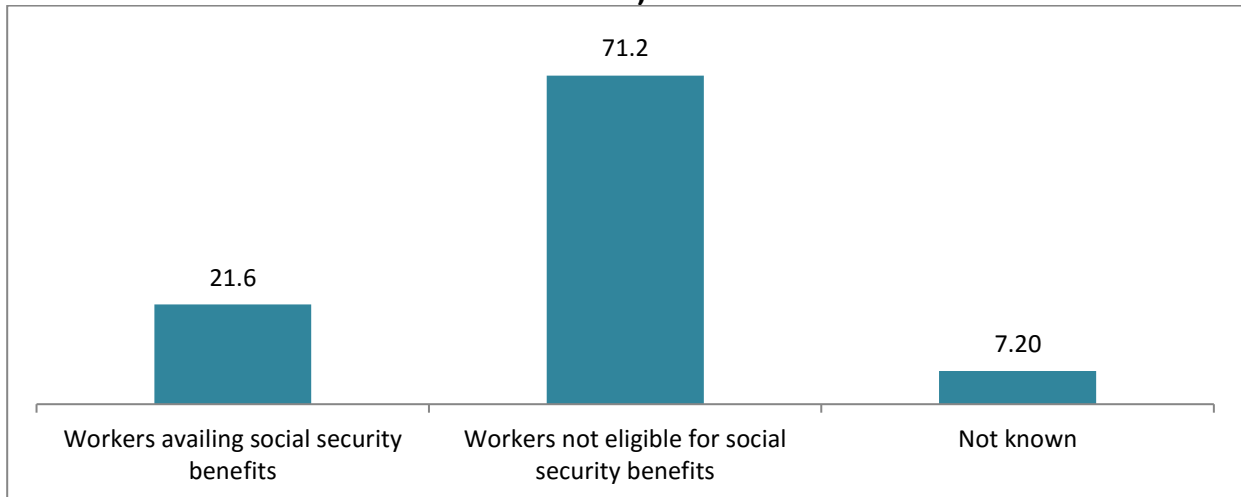

rural males and females were not eligible for social security benefits, the corresponding figures were 60.5 per cent and 62.1 per cent for urban males and females respectively (Table 40 to 40.11, Annexure IV).

**Table 3.13: Workers except self-employed who received paid leave and availing social security benefits All India (in %)**

Workers by Paid Leave/ social security benefits	Rural				Urban				Rural+ Urban			
	M	F	T	P	M	F	T	P	M	F	T	P

**Figure 3.12: Workers except self-employed availing social security benefits (in %)**

**CONCEPTS AND DEFINITIONS**

Important concepts and definitions used in the survey and relevant to this report are explained as below:

**1.1 House:** Every structure, tent or other place of shelter, etc. which is used primarily for residential use is considered as a house for the present survey.

**1.2 Household:** A group of persons normally living together and taking food from a common kitchen constitutes a household. It will include temporary stay-aways (those whose total period of absence from the household is expected to be less than 6 months) but exclude temporary visitors and guests (expected total period of stay less than 6 months). The members of a household may or may not be related by blood or marriage to one another. The following examples may be useful while determining the group of persons to be considered as households:

- (a) In case a hostel is listed, it will constitute a single household.
- (b) Inmates of hotel, lodging and boarding house etc. will also constitute a single household.
- (c) In deciding the composition of a household, more emphasis is to be placed on 'normally living together' than on ordinarily taking food from a common kitchen. In case the place of residence of a person is different from the place of boarding, he or she will be treated as a member of the household in which he or she resides.
- (d) A resident employee, or domestic servant or a paying guest will be considered as a member of the household in which he or she resides even though he or she is not a member of the same family if the period of stay is six month or above.
- (e) In case a member of a family (say a son or a daughter of the head of family) stays elsewhere like in hostel for studies or for any other reason for major part of the year, he/she will not be considered as a member of his/her parents household.

**1.3 Household size:** The number of members normally residing in a household is its size.

**1.4 Economic activity:** The entire spectrum of human activity falls into two categories: i) economic activity and ii) non-economic activity. Any activity that results in production of goods and services which adds value to the national product is considered as an economic activity. Further the economic activities have two parts namely i) market activities and ii) non-market activities. Market activities are those that involve remuneration to those who perform it, i.e., activity performed for pay or profit. Such activities include production of all goods and services for market including those of government services, etc. On the other hand non-market activities are those involving the production of primary commodities for own consumption and own account production of fixed assets. The term 'economic activity' under the fifth Annual Employment and Unemployment survey includes:

i. All the market activities described above, i.e., the activities performed for pay or profit which result in production of goods and services for exchange,

ii. Of the non-market activities,  
a) All the activities relating to the primary sector which result in production (including free collection of uncultivated crops, forestry, firewood, hunting, fishing, mining, quarrying, etc.) of primary goods for own consumption.  
b) The activities relating to the own-account production of fixed assets. Own account production of fixed assets include construction of own houses, roads, wells, etc., and of machinery, tools, etc., for household enterprise and also construction of any private or community facilities free of charge. A person may be engaged in own account construction in the capacity of either a labour or a supervisor.

**1.5 Activity status:** It is the activity in which a person is engaged during the reference period, which in turn decides the person's participation in economic and /or non-economic activities. According to this, a person will be in one or a combination of the following three statuses during a reference period:

i. Working or engaged in economic

- activity (work);
- ii. Not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' in case the 'work' is available and
- iii. Neither engaged in any economic activity (work) nor available for 'work'.

**1.6** Activity statuses mentioned against sl. no. (i) & (ii) above, are associated with 'being in labour force' and the last sl.no. (iii) is associated with 'not being in the labour force'. Being in labour force is further categorized into two parts (i) employed and unemployed.

**1.7** The three broad activity statuses according to 5<sup>th</sup> EUS have been further subdivided into the following categories as listed below:

- i. working or being engaged in economic activity (employed):
  - a) worked as an own-account worker (self-employed);
  - b) employer (self-employed);
  - c) worked in household enterprise as 'helper' (unpaid family worker);
  - d) worked as regular salaried/wage employee other than contract worker;
  - e) worked as contract worker;

- f) worked as casual wage labour in public works;
- g) worked as casual wage labour in other types of works;
- ii. not working but seeking or available for work (unemployed);
- iii. neither working nor available for work (not in labour force)
  - i) attended educational institution;
  - ii) attended domestic duties;
  - iii) recipients of rent, pension, remittance, etc;
  - iv) not able to work due to disability;
  - v) Others (prostitutes, beggars, etc.);

**1.8** The various concepts like, 'workers', 'unemployed', labour force, out of labour force are as explained below:

**I. Workers (or employed):** Persons who are engaged in any economic activity during the reference period or who, despite their attachment to their economic activity, have temporarily abstained from work, for reasons of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work constitute workers. Unpaid helpers

who assist in the operation of an economic activity in the household, farm or non-farm activities are also considered as workers.

## **II. Seeking or available for work**

**(or unemployed):** Persons, who owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing condition of work and remuneration are considered as those who are 'seeking or available for work' (or unemployed).

**III. Labour force:** Persons who are either 'working' (employed) or 'seeking or available for work' (unemployed) or both during a major part of the reference period, constitute the labour force.

**IV. Out of labour force:** Persons who are neither 'working' and at the same time nor 'seeking or available for work' for various reasons during the major part of the reference period are considered to be 'out of the labour force'. The persons under this category includes students, persons engaged in domestic duties,

rentiers, pensioners, recipients of remittances, those living on alms, infirm or disabled persons, too young or too old persons, beggars, prostitutes, etc.

**1.9** It may be noted that workers have been further categorized as self-employed, regular salaried/wage employee and casual wage labour. The details of these categories are defined in the following paragraphs.

**I. Self-employed:** Persons who operate their own farm or non-farm enterprises or are engaged independently in a profession or trade on own-account or with one or a few partners are considered as self-employed. The essential feature of the self-employed is that they have autonomy (i.e., regarding how, where and when to produce) and economic independence (i.e. regarding market, scale of operation and money) for carrying out operation. The fee or remuneration received by them consists of two parts - the share of their labour and profit of the enterprise. In other words, their remuneration is determined wholly or mainly by sales or profits of the goods or services which are produced.

The self-employed persons may again be categorized into the following groups:

i) **Own-account workers:** The self-employed persons, who operate their enterprises on their own account or with one or a few partners and who during the reference period by and large, run their enterprises without hiring any labour are called as own account workers. They may, however, have unpaid helpers to assist them in the activity of the enterprise.

ii) **Employers:** The self-employed persons who work on their own account or with one or a few partners and by and large run their enterprises by hiring labour are considered as the employers.

iii) **Helpers in household enterprise:** The helpers are a category of self-employed persons, mostly family members, who keep themselves engaged in their household enterprises, working full or part time and do not receive any regular salary or wages in return for the work performed. They do not run the household enterprise on their own but

assist the related person living in the same household in running the household enterprise.

#### **1.10 Regular salaried/wage employee other than contract workers:**

Persons working in others farm or non-farm enterprises (both household and non-household) and getting in return salary or wages on a regular basis (and not on the basis of daily or periodic renewal of work contract) are the regular salaried/wage employees. The category not only includes persons getting time-rate wage but also persons receiving piece-rate wage or salary and paid apprentices, both full time and part-time.

#### **1.11 Worked on contract basis:**

As per the definition of contract worker, a worker is deemed to be employed as contract worker when he/she is hired in connection with the work of an establishment by or through a contractor. Contract workmen are indirect employees; persons who are hired, supervised and remunerated by a contractor who, in turn, is compensated by the establishment. For the purpose of present survey, in addition to the above mentioned category of workers, the term contract workers includes workers whose work are

governed by a contract agreement either in writing or oral directly by the establishment. More precisely, the workers hired by the establishment directly for a specific job and for a specified period will also be categorized under the contract category of workers.

**1.12 Casual wage labour:** A person casually engaged in others farm or non-farm enterprises (both household and non-household) and getting in return wage according to the terms of the daily or periodic work contract is a casual wage labour. Usually in the rural areas, a type of casual labourers can be seen who normally engage themselves in 'public works' activities. 'Public works' are those activities which are sponsored by the Government or local bodies for construction of roads, digging of ponds, etc. as relief measures (like flood relief, drought relief, famine relief, etc.) and also under various employment generation schemes under poverty alleviation programmes.

**1.13 Different approaches for determining activity status:** The persons surveyed can be classified into various activity categories on the basis of activities pursued by

them during certain specified reference periods. There could be three reference periods viz. (i) one year, (ii) one week and (iii) each day of the reference week. Based on these three reference periods, three different measures of activity status are arrived at. These are termed respectively as usual principal status, current weekly status and current daily status. The activity status determined on the basis of a reference period of one year is known as the usual principal activity status of the person, that determined on the basis of a reference period of 1 week is known as the current weekly status (CWS) of the person and the activity status determined on the basis of a reference period of one day is known as the current daily status (CDS) of the person. In this report, the labour force related parameters are estimated for a reference period of one year.

**1.14 Usual activity status:** The usual activity status relates to the activity status of a person during the last completed twelve months from the date of survey. The activity in which a person spent relatively longer time (major time criterion) during the reference period is considered as the usual principal activity of the person. To

decide the usual principal activity of a person, he/she is first categorized as belonging to the labour force or not during the reference period on the basis of major time criterion. Persons, thus adjudged as not belonging to the labour force are assigned the broad activity status 'neither working nor available for work'.

**1.15** For the persons belonging to the labour force, the broad activity status of either 'working' or 'not working but available for work and/or seeking work' is then ascertained again on the basis of the relatively longer time spent during the period in the labour force. Within the broad activity status so determined, the detailed activity status category of a person pursuing more than one such

**Average monthly household earnings:**

Average monthly earnings of the sample household i.e., all members of the household, from all the sources is to be filled against this item. A reference period of 12 months shall be observed for calculating the household includes earnings of members from different sources like income from trade, wage employment, casual labour, rental income, interest received, remittances from abroad, old age pension etc excluding earnings of domestic servant if any in the household.

activity will be determined again on the basis of the relatively longer time spent.

**1.16 Subsidiary economic**

**activity status:** A person whose usual principal status is determined on the basis of the major time criterion may have pursued some other economic activity for 30 days or more during the reference period. The status in which such economic activity is pursued during the reference period is the subsidiary economic activity status of the person. In case of multiple subsidiary economic activities, subsidiary activity will be determined on the basis of relatively longer time spent criterion.

**Saving Bank account in any bank:**

If any of the household member has saving bank account in any bank (government, private, co-operative).

**Average monthly earnings in Rs.**

For every member who is employed (status code 11-51), average monthly earnings is to be collected and entered in terms of codes as given in the schedule. Average Monthly earnings are defined as the monetary returns from economic activities undertaken during the reference period by members having status code 11-

51. In case of wage wage/salaried, contract and casual workers, the average monthly earnings includes wages and salaries, dearness allowances, other guaranteed allowances, over time payment, bonus, family allowances, or any

other social security payments made by the employer. In case of self employed persons, the earnings will be taken as the monthly amount received by them on an average during the reference period.

## **SAMPLING DESIGN & ESTIMATION PROCEDURE**

### **Introduction**

Labour Bureau has been entrusted with the task of conducting Annual Employment-Unemployment Surveys in the country. The objective of this annual survey is to regularly make available the basic inputs on labour force related parameters to facilitate policy formulation/review. The first such Annual Household Employment-Unemployment survey for the period 2009-10 was conducted during the year 2010. Till so far four such surveys have been conducted and thereon reports released. The present one is the Fifth Annual Employment-Unemployment Survey in the series.

**2.1** In the current survey, a moving reference period is used to determine the usual status activity of the persons. The survey has been conducted in all the States/UTs by covering all the districts in the country. The field work of the present survey was launched in April, 2015 and completed in majority of the States/UTs by December, 2015. A

sample of about 1.57 lakh household schedules has been covered during the survey in 36 States/UTs.

**2.2 Sample Design:** A stratified multi-stage sample design has been adopted for the Fifth Annual Household Employment-Unemployment Survey. The first stage units (FSU) for rural sector are the 2011 census villages in all the States/UTs, except Kerala State, where panchayat wards are the FSUs. In case of urban sector, the latest available Urban Frame Survey (UFS) blocks for the period 2007-12 prepared by National Sample Survey Office are the First stage units.

**2.3 Stratification:** Each district of a State/UT has been divided into two strata: i) rural stratum comprising of all the rural areas of the district and ii) urban stratum comprising of all the urban areas of the district.

**2.4 Sample Size:** In all 36 States/UTs, a total sample of

13076 First Stage Units (FSUs) is allocated at All India level keeping in view the resource availability and other logistics. Broadly considering the population proportion, a sample of 7416 FSUs is allocated to rural sector in all the 36 States/UTs, while rest 5660 FSUs are allocated in the urban sector. While allocating the sample, additional weight age is given to the urban sector as compared to rural sector; so that the urban areas are not under represented in the survey on the basis of proportional allocation, with the condition that in major states the total sample size in urban sector does not exceed that of the rural sector.

**2.5 Allocation of Sample to States/UTs:** Distribution of total number of sample FSUs in rural sector among the States/UTs is done in proportion to their respective rural population as per 2011 census, subject to a minimum sample allocation to each State/UT. For urban sector, the sample FSUs are allocated among the 36 States/UTs in proportion to the UFS blocks for the period 2007-12. A minimum sample size in a State/UT is allocated at 24 FSUs with a

minimum of 12 each in rural and urban areas.

**2.6 Allocation of State/UT level rural and Urban Stratum sample to districts:** The State/UT level rural/ urban sample is further distributed among its districts in proportion to rural/ urban population/urban frame survey blocks. A minimum of 24 FSUs are allocated to each State/UT for rural and urban areas combined. Stratum level sample is adjusted to multiple of 4 FSUs with a minimum sample size of 4 FSUs in a stratum. In case of some North Eastern States and UTs a marginal increase in sample size is done due to their under representation in overall sample because of their lower population.

**2.7 Selection of FSUs:** For the rural stratum, the village lists based on 2011 census frame are taken in the same order and the required sample is drawn by using circular systematic sampling technique with probability proportional to size (size being the population of the village as per Census 2011). In case of urban stratum, the UFS blocks are arranged in ascending order based on the town variable. After

arranging UFS blocks, sample is drawn by circular systematic sampling. This arrangement is done to ensure that most of the towns are represented in the sample. In both, the rural and the urban strata, samples are drawn in the form of two independent sub-samples.

**2.8 Criteria for hamlet group/sub block formation:** Large FSUs having approximate present population of 1200 or more are divided into a suitable number (say, D) of 'hamlet-groups'(hg) in the rural sector and 'sub-blocks'(sb) in the urban sector as stated below.

APPROXIMATE PRESENT POPULATION OF THE SAMPLE VILLAGE/ URBAN BLOCK	NO. OF HG/SB TO BE FORMED (D)
LESS THAN 1200 (NO HAMLET-GROUP/SUB BLOCK)	1
1200 TO 1799	3
1800 TO 2399	4
2400 TO 2999	5
3000 TO 3599	6
.....AND SO ON	

**2.9** For rural areas of Himachal Pradesh, Sikkim, Uttarakhand (except Dehradun plains, Nainital Plains, Haridwar and Udham Singh Nagar), Poonch, Rajouri,

Udhampur, Doda, Leh (Ladakh), Kargil districts of Jammu & Kashmir and Idukki district of Kerala, the number of hamlet groups are formed as follows:

APPROXIMATE PRESENT POPULATION OF THE SAMPLE VILLAGE/ BLOCK	NO. OF HGS/ SBS TO BE FORMED (D)
LESS THAN 600 (NO HAMLET-GROUPS/SUB BLOCKS)	1
600 TO 899	3
900 TO 1199	4
1200 TO 1499	5
.....AND SO ON	

## **2.10 Selection of hamlet groups/sub blocks:**

In case of large village/UFS block wherever hamlet-groups/sub-blocks have been formed, two hamlet-groups/sub-blocks are selected. The procedure to select the hg/sb is as follows:

- i) The hg/sb with maximum percentage share of population will always be selected and termed as hg/sb 1.
- ii) Second hg/sb will be selected from the remaining hgs/sbs by simple random sampling and termed as hg/sb 2.

Listing and selection of the households will be done independently in the two selected hamlet-groups/sub-blocks. In case hamlet-groups/sub-blocks is formed in a sample FSU, it is ensured that the hamlet-groups/sub-blocks formed are clearly identifiable in terms of physical landmarks. The FSU without hg/sb formation will be treated as sample hg/sb number 1.

**2.11 Listing of households:** After determining the hamlet-groups/sub-blocks i.e. areas to be

considered for listing, all the households in that area will be listed (including those found to be temporarily locked after ascertaining the temporariness of locking of households through local people). The hamlet-group/sub-block with sample hg/sb number 1 will be listed first and that with sample hg/sb number 2 will be listed next.

## **2.12 Formation of Second Stage Strata and allocation of households:**

For canvassing the schedules, all the households listed in selected FSU/ hamlet-groups/ sub-blocks are to be stratified into four second stage strata (SSS) as given below:

The second-stage-strata in the rural and urban stratum will be formed based on the number of persons in a household aged 15 years and above. The four second-stage-strata (SSS) in the rural and urban strata are formed in the following order:

## **2.13 Allocation of households:**

The number of households to be surveyed (h) in each second stage stratum in the sample FSUs is as follows:

SECOND STAGE STRATA (SSS)	NO. OF MEMBERS IN THE HOUSEHOLD AGED 15 YEARS & ABOVE
SSS1	1
SSS2	2-3
SSS3	4-5
SSS4	6 & MORE

SSS	WITHOUT HG/SB FORMATION		WITH HG/SB FORMATION IN BOTH RURAL & URBAN STRATA	
	RURAL	URBAN	HG1/SB1	HG2/SB2
H1	1	1	1	1
H2	3	4	2	2
H3	4	4	2	2
H4	4	3	1	1
<b>TOTAL</b>	<b>12</b>	<b>12</b>	<b>6</b>	<b>6</b>

#### 2.14 Selection of Households:

From each Second Stage Strata the sample households are selected by simple random sampling without replacement.

#### 2.15 Shortfall of households to be compensated:

Shortfall of households in the frame of any particular SSS will be compensated from the same SSS of the other hg/sb or from the other SSS of the same or other hg/sb where additional household(s) are available. The procedure is as follows:

Step 1: Allocate the required number of households to each SSS wherever possible and identify the SSS having shortfall.

Step 2: In case of hg/sb formation, compensate from the same SSS of the other hg/sb, if available. Otherwise, go to Step 3.

Step 3: Find the SSS where additional households are available following the priority order of SSS 1, SSS 2, SSS 3 & SSS 4 and compensate.

**2.16** The table given below may be useful for deciding the SSS from

which the compensation is to be made.

SSS HAVING SHORTFALL	PRIORITY ORDER OF SSS FOR COMPENSATION
1	2, 3, 4
2	1, 3, 4
3	1, 2, 4
4	1, 2, 3

**2.17** If there is hg/sb formation, for each SSS as per priority order, compensation may be made from the hg/sb where shortfall occurs, failing which from other hg/sb and so on.

**2.18** For example, if shortfall is in SSS 3 of hg/sb 1, first try to compensate from SSS3 of hg/sb 2,

failing which try from SSS 1 of hg/sb 1, failing which try from SSS 1 of hg/sb 2. If the shortfall still remains then try from SSS 2 of hg/sb 1, failing which try from SSS 2 of hg/ sb 2. If the shortfall still remains then try from SSS 4 of hg/sb 1, failing which try from SSS 4 of hg/ sb 2.

### Estimation Procedure

t = subscript for t-th stratum

m = subscript for sub-sample (m = 1, 2)

i = subscript for i-th FSU (village/panchayat ward/ UFS block)

d = subscript for a hamlet-group/ sub-block (d = 1, 2)

j = subscript for j-th second stage stratum in an FSU/hg/sb (j = 1,2,3,4)

k = subscript for k-th sample household under a particular second stage stratum within an FSU/ hg/sb

D = total number of hg's/ sb's formed in the sample FSU

D\* = 1 if D = 1

= D-1 for FSUs with D > 1

N = total number of FSUs in any urban stratum

Z = total size of a rural stratum

$z$  = size of selected sample village

$n$  = number of sample FSUs surveyed in a stratum

$H$  = total number of households listed in a second-stage stratum of an FSU / hamlet-group or sub-block of sample FSU

$h$  = number of households surveyed in a second-stage stratum of an FSU / hamlet-group or sub-block of sample FSU

$x, y$  = observed value of characteristics  $x, y$  under estimation

$\hat{X}, \hat{Y}$  = estimate of population total  $X, Y$  for the characteristics  $x, y$

Under the above symbols,

$y_{tmidjk}$  = observed value of the characteristic  $y$  for the  $k$ -th household in the  $j$ -th second stage stratum of the  $d$ -th hg/ sb ( $d = 1, 2$ ) of the  $i$ -th FSU belonging to the  $m$ -th sub-sample for the  $t$ -th stratum.

### **Formulae for Estimation of Aggregates for a stratum in a district (rural & urban)**

#### **Listing Schedule 'A'**

**Rural stratum:** For estimating the number of households possessing a characteristic

$$\hat{Y} = \frac{Z}{n} \sum_{i=1}^n \frac{1}{z_i} \{y_{i1} + D_i^* y_{i2}\}$$

Where  $y_{i1}, y_{i2}$  are the total number of households possessing the characteristic  $y$  in hg's 1 & 2 of the  $i$ -th FSU respectively.

**Urban Stratum:** For estimating the number of households possessing a characteristic in the urban stratum of a district.

$$\hat{Y} = \frac{N}{n} \sum_{i=1}^n \{y_{i1} + D_i^* y_{i2}\}$$

Where  $y_{i1}, y_{i2}$  are the total number of households possessing the characteristic  $y$  in sub-blocks 1 & 2 of  $i$ -th FSU respectively.

**Schedule 'B':** (Employment – Unemployment Survey Schedule)

**Estimation formula for a rural stratum in a district:**

Rural:

$$\hat{Y} = \sum_{j=1}^4 \frac{Z}{n_j} \sum_{i=1}^{n_j} \frac{1}{z_i} \left\{ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right\}$$

**Estimation formula for an urban stratum in a District:**

$$\hat{Y} = \sum_{j=1}^4 \frac{N}{n_j} \sum_{i=1}^{n_j} \left\{ \frac{H_{i1j}}{h_{i1j}} \sum_{k=1}^{h_{i1j}} y_{i1jk} + D_i^* \frac{H_{i2j}}{h_{i2j}} \sum_{k=1}^{h_{i2j}} y_{i2jk} \right\}$$

**Overall Estimate for Aggregates:**

Overall estimate for aggregates for a stratum ( $\hat{Y}_t$ ) based on two sub-samples is obtained as:

$$\hat{Y}_t = \frac{1}{2} \sum_{m=1}^2 \hat{Y}_{tm}$$

**Overall Estimate of Aggregates at State/UT/all-India level:**

The overall estimate  $\hat{Y}$  at the State/ UT/ all-India level is obtained by summing the stratum estimates  $\hat{Y}_t$  over all strata belonging to the State/ UT/ All-India.

Table (A1): Census Population as on 1st March 2011, percentage decadal change in population of aged 15 years and above between census 2001 and 2011 and projected population as on 1st July 2015 for each State/UT and All-India.
