HDI is a composite index measuring average achievement in 3 basic dimensions of human development - a long and healthy life, knowledge and a decent standard of living.

Inequality adjusted HDI (IHDI) is the value of HDI adjusted for inequalities in the 3 basic dimensions of human development.

Overall loss is the loss in potential human development due to inequality calculated as the percentage difference between HDI and the IHDI.

Difference in ranking by GNI per-capita and by the HDI. A -ve value means that the country is better ranked by GNI than by HDI.

Country ranking is out of 187 countries.
