## *Sample Design & Estimation Procedure*

---

# Note on Sample Design and Estimation Procedure

## 1. Introduction

1.1 The National Sample Surveys (NSS) are being conducted by the Government of India since 1950 to collect socio-economic data employing scientific sampling methods. 77<sup>th</sup> round of NSS commenced from 1<sup>st</sup> January 2019.

## 2. Subject coverage

2.1 NSS 77<sup>th</sup> round was earmarked for collection of data on 'Land and Livestock Holdings of Households and Situation Assessment of Agricultural Households' and 'Debt and Investment'. The last survey on these subjects was conducted in 70<sup>th</sup> round of NSS (January 2013 - December 2013).

## 3 Outline of the Survey programme

**3.1 Geographical coverage:** The survey was cover the whole of the Indian Union *except the* villages in Andaman and Nicobar Islands which were difficult to access.

**3.2 Survey Period and Visits:** The survey period was of one year duration.

**3.3 Schedules of enquiry:** During this round, the following schedules of enquiry were canvassed:

Schedule 0.0 :	list of households
Schedule 33.1 :	land and livestock holdings of households and situation assessment of agricultural households
Schedule 18.2 :	debt and investment

Schedule 33.1 was canvassed in rural areas only.

**3.4 Visits 1 & 2:** Each sample FSU and sample households were visited twice during this round. Since the workload of the first visit (i.e. Visit 1) is more, the first visit was continued till the end of August, 2019. Thus, period of the first visit (i.e. Visit 1) was of January – August, 2019 (duration of eight months) and that of the second visit (i.e. Visit 2) was September – December, 2019 (duration of four months).

The listing schedule (Schedule 0.0) was canvassed only in Visit 1. Schedules 33.1 and 18.2 were canvassed in independent sets of sample households. Visit 1 and Visit 2 schedules were canvassed in the same set of sample households during first and second visit

respectively. Contents of the schedules for the two visits were not same since the information relate to two different periods.

**3.5 Sub-rounds:** The survey period of the round was divided into two sub-rounds. Sub-round one was consist of the first half of the survey period of each visit i.e. January– April, 2019 for Visit 1 and September – October, 2019 for Visit 2 while sub-round two was consist of the remaining period of the respective visits. Thus, each sub-round was of four months for Visit 1 and two months for Visit 2.

In each of these two sub-rounds equal number of sample FSUs were allotted for survey with a view to ensuring uniform spread of sample FSUs over the entire survey period. Attempts were made to survey each of the FSUs during the sub-round to which it was allotted. Because of the arduous field conditions, this restriction was not strictly enforced in *Andaman and Nicobar Islands, Lakshadweep, Ladakh region (Leh and Kargil districts) of Jammu & Kashmir and rural areas of Arunachal Pradesh and Nagaland.*

The FSUs visited in the first sub-round of Visit 1 was revisited during the first sub-round of the Visit 2. Similarly, FSUs of sub-round 2 of Visit 1 was revisited in sub-round 2 of Visit 2.

**3.6 Participation of States:** All the States and Union Territories except Andaman & Nicobar Islands, Dadra & Nagar Haveli and Lakshadweep participated. Following is the matching pattern of the participating States/ UTs.

State/UT	Extent of matching
Nagaland (U)	triple
Manipur, Telangana	double
Maharashtra (U)	one and half
Remaining States/ UTs	equal

## 4. Sample Design

### 4.1 Formation of sub-units (SUs):

**4.1.1 Rural areas:** A rural village is notionally divided into a number of sub-units (SU) of more or less equal population during the preparation of frame. Census 2011 population of villages was projected by applying suitable growth rates and the number of SUs formed in a village was determined apriori.

4.1.2 The above procedure of SU formation was implemented in the villages with population more than or equal to 1000 as per Census 2011. In the remaining villages, no SU was formed.

4.1.3 The number of SUs formed in the villages (with Census 2011 population 1000 or more) of the frame was decided before selection of the samples following the criteria given below:

projected population of the village	no. of SUs formed
less than 1200	1
1200 to 2399	2
2400 to 3599	3
3600 to 4799	4
4800 to 5999	5
.....and so on	....

#### 4.1.4 Special case:

4.1.4.1 For rural areas of (i) Himachal Pradesh, (ii) Sikkim, (iii) Andaman & Nicobar Islands, (iv) Uttarakhand (except four districts Dehradun, Nainital, Hardwar and Udham Singh Nagar), (v) Punch, Rajouri, Udhampur, Reasi, Doda, Kishtwar, Ramban, Ladakh region (Leh and Kargil districts) of Jammu and Kashmir and (vi) Idukki district of Kerala, numbers of SUs formed in a village were determined in such a way that each SU contains 600 or less projected population. Further, SUs were not formed in the villages in the above mentioned districts/States with population less than 500 as per Census 2011. In the remaining villages, the number of SUs formed for these States/districts is as follows:

projected population of the village	no. of SUs formed
less than 600	1
600 to 1199	2
1200 to 1799	3
1800 to 2399	4
2400 to 2999	5
.....and so on	....

4.1.4.2 For rural parts of Kerala, similar procedure as mentioned in para 4.1.3 above was adopted with the modification that the SUs were formed within Panchayat Wards instead of villages.

4.1.5 **Urban areas:** SUs were formed in urban sector also. The procedure was similar to that adopted in rural areas except that SUs were formed on the basis of households in the UFS frame instead of population, since UFS frame does not have population. Each UFS block with number of households more than or equal to 250 was divided into a number of SUs. In the remaining UFS blocks, no SU was formed.

**4.2 Outline of sample design:** A stratified two stage design was adopted for the 77<sup>th</sup> round survey. *The first stage units (FSU) were villages/UFS blocks/sub-units (SUs) as per the situation.* The ultimate stage units (USU) were households in both the sectors.

### 4.3 Sampling Frame for First Stage Units (FSUs):

4.3.1 There was no SU formation in uninhabited villages and villages (Panchayat wards for Kerala) with population less than 1000 as per Census 2011 (less than 500 as per Census 2011 for the areas mentioned in para 4.1.4.1) and entire village was considered as one FSU. All such villages (Panchayat wards for Kerala) were the First Stage Units (FSUs).

4.3.2 In the remaining villages, notional sub-units (SUs) were formed following the procedure as described in para 4.1. Such SUs were considered as First Stage Units (FSUs).

4.3.3 For the UFS blocks with less than 250 households, the entire UFS block were considered as one FSU. In the remaining UFS blocks, the SUs were considered as First Stage Units (FSUs).

4.3.4 List of FSUs as described above was the sampling frame for respective cases.

### 4.4 Stratification:

- (a) Each district was a stratum. Within each district of a State/UT, generally speaking, two basic strata were formed: (i) rural stratum comprising of all rural areas of the district and (ii) urban stratum comprising of all the urban areas of the district. However, within the urban areas of a district, if there were one or more towns with population one million or more as per Census 2011, each of them formed a separate basic stratum and the remaining urban areas of the district were considered as another basic stratum.
- (b) A special stratum, in the *rural areas* only, was formed at all-India level before district level strata were formed in each State/UT. This stratum comprised all the uninhabited villages as per Census 2011 belonging to all States/UTs.

### 4.5 Sub-stratification:

4.5.1 **Rural sector:** Three groups of villages were formed within each stratum (except special rural stratum):

Group 1	all villages (Panchayat wards for Kerala) with Census 2011 population less than 250
Group 2	all villages (Panchayat wards for Kerala) with Census 2011 population more than or equal to 250 but less than 500
Group 3	remaining villages

The sample size for a rural stratum was allocated among 3 groups in proportion to population. Let  $r_1$ ,  $r_2$  and  $r_3$  be the allocations to Group 1, Group 2 and Group 3 respectively. The villages within each group were first arranged in ascending order of number of

cultivators. For all the three groups within each strata, ' $r_1/2$ '>1, ' $r_2/2$ '>1 and ' $r_3/2$ '>1, was imply formation of 2 or more sub-strata in each group. Sub-strata was demarcated in Group 1, Group 2 and Group 3 respectively in such a way that each sub-stratum was comprise a group of villages (all SUs of a village considered together) of the arranged frame and have more or less equal number of cultivators.

The sub-strata in Group 1 was always be numbered as 11, 12, 13,..... The numbering of sub-strata in Group 2 were 21, 22, 23,..... Finally, for Group 3, sub-strata numbers started from 31.

If number of FSUs in a particular Group was very small, no sub-stratum was formed in that Group. Further, in those strata where allocations were very small, minimum allocation for Group 1 and Group 2 was 1 each.

**4.5.2 Urban sector:** Let 'u' be the sample size allocated for an urban stratum. For all strata, if ' $u/2$ ' >1, implying formation of 2 or more sub-strata, all the UFS blocks within the stratum were first arranged in ascending order of total number of households in the UFS blocks as per urban frame. Then sub-strata was demarcated in such a way that each sub-stratum comprised a group of UFS blocks (all SUs within the block taken together) having more or less equal number of households.

#### **4.6 Total sample size (FSUs)**

4.6.1 9,954 FSUs have been allocated for the central sample at all-India level. For the state sample, there are 10,630 FSUs allocated for all-India.

#### **4.7 Allocation of total sample to State/UTs**

4.7.1 The total number of sample FSUs were allocated to the State/UTs in proportion to population as per Census 2011 subject to a minimum sample allocation to each State/UT.

#### **4.8 Allocation of State/UT level sample to rural and urban sectors**

4.8.1 State/UT level sample sizes were allocated between two sectors in proportion to population as per Census 2011 with 1.5 weightage to urban sector. A minimum of 4 FSUs, each for rural and urban sector separately, was allocated to each State/UT. For more urbanised big States like Maharashtra, Tamil Nadu etc., the urban allocation was limited to rural sample size to avoid undue weightage to urban sector.

#### 4.9 Allocation to strata

4.9.1 Within each sector of a State/ UT, the respective sample size was allocated to the different strata in proportion to the population as per Census 2011. Stratum level allocation was adjusted to multiples of 2 with a minimum sample size of 2.

*For special stratum formed at state level as mentioned in para 4.4 (b), 4 FSUs were allocated.*

#### 4.10 Allocation to sub-strata:

4.10.1 **Rural:** Allocation was 2 for each sub-stratum in the rural sector (except for sub-strata formed in Group 1 and Group 2 in some cases where minimum allocation was 1).

4.10.2 **Urban:** Allocation was 2 for each sub-stratum in the urban sector.

4.10.3 In certain exceptional cases, especially for some States in the North Eastern Region, bigger sub-strata were formed because of much skewed distribution of villages. In such sub-strata, the allocations were more than 2.

#### 4.11 Selection of FSUs within a stratum/sub-stratum:

4.11.1 From all the sub-strata in both rural and urban sector within each stratum, required numbers of FSUs were selected by Simple Random Sampling Without Replacement (SRSWOR) scheme.

#### 4.12 Formation of sub-units and listing of households

4.12.1 **Procedure of formation of SUs:** After identification of the boundaries of the village/ UFS block which contains the sample FSU, the village/ UFS block was to be divided into the number of SUs (say, D) as given in the sample list by more or less equalising the present population of the village/UFS block in which the sample FSUs were located. For villages/blocks where the number of SUs to be formed was 1 as per the sample list, no SU formation was required.

4.12.2 **Listing of households:** All the households of the sample FSU are listed. Temporarily locked households are also listed after ascertaining the temporariness of locking of households through local enquiry.

#### 4.13 Formation of second stage strata (SSS) of households and allocation among SSS:

4.13.1 **Schedule 33.1 (Rural only): Land and Livestock Holdings of Households and Situation Assessment of Agricultural Households:** Five SSS were formed. The composition of the SSS and number of households surveyed from different SSS are as follows:

Composition	SSS No.	number of households to be surveyed
non-agricultural households	1	2
agricultural households with land possessed less than 0.250 hectare (0.618 acre)	2	2
agricultural households with land possessed equal to or more than 0.250 hectare but less than 1.000 hectare (2.471 acre)	3	2
agricultural households with land possessed equal to or more than 1.000 hectare but less than 2.000 hectares (4.942 acre)	4	2
agricultural households with land possessed equal to or more than 2.000 hectares	5	2
<b>Total</b>		<b>10</b>

4.13.2 **Schedule 18.2: Debt and Investment Survey (AIDIS):** A cut-off points 'A' (in Rs.) was determined from household's usual monthly consumer expenditure collected in Schedule 21.1: Domestic Tourism Expenditure of NSS 72<sup>nd</sup> round (July, 2014 – June, 2015) data (with proper adjustments using price indices) for each NSS region for both rural and urban areas separately, in such a way that top 20% of the population have MPCE more than 'A'.

Six SSS were formed both in rural and urban sector considering the MPCE and indebtedness of households. The composition of the SSS and number of households surveyed from different SSS for both rural and urban sectors are as follows:

<b>Composition</b>	<b>SSS No.</b>	<b>number of households to be surveyed</b>
households with $MPCE > A$ and indebted either to institutional agencies only or to both institutional and non-institutional agencies	1	2
households with $MPCE > A$ and indebted to non-institutional agencies only	2	2
households with $MPCE > A$ and without any indebtedness	3	2
households with $MPCE \leq A$ and indebted either to institutional agencies only or to both institutional and non-institutional agencies	4	2
households with $MPCE \leq A$ and indebted to non-institutional agencies only	5	2
households with $MPCE \leq A$ and without any indebtedness	6	2
<b>Total</b>		<b>12</b>

**4.14 Selection of households:** The sample households from each SSS for each of the schedules were selected by SRSWOR.

## 5. Estimation procedure

### 5.1 Notations:

s = subscript for s-th stratum

t = subscript for t-th sub-stratum

i = subscript for i-th FSU [SU/ village (panchayat ward)/ block]

j = subscript for j-th second stage stratum in an FSU

k = subscript for k-th sample household within an FSU

N = total number of FSUs in any rural/urban sub-stratum

n = number of sample FSUs surveyed including 'uninhabited' and 'zero cases' but excluding casualty for a particular sub-stratum

H = total number of households listed in a second-stage stratum of an FSU

h = number of households surveyed in a second-stage stratum of an FSU

x, y = observed value of characteristics x, y under estimation

$\hat{X}$ ,  $\hat{Y}$  = estimate of population total X, Y for the characteristics x, y

Under the above symbols,

$y_{stijk}$  = observed value of the characteristic y for the k-th household of the j-th second stage stratum of the i-th FSU for the t-th sub-stratum of s-th stratum.

However, for ease of understanding, a few symbols have been suppressed in following paragraphs where they are obvious.

### 5.2 Formulae for Estimation of Aggregates for a stratum × sub-stratum:

#### 5.2.1 Schedule 0.0 (Rural/Urban):

- (i) For estimating the number of households in a stratum × sub-stratum possessing a characteristic:

$$\hat{Y} = \frac{N}{n} \sum_{i=1}^n y_i$$

where  $y_i$  is the total number of households possessing the characteristic y in i-th FSU respectively.

- (ii) For estimating the number of villages in a stratum × sub-stratum possessing a characteristic:

$$\hat{Y} = \frac{N}{n} \sum_{i=1}^n y_i$$

where  $y_i$  is taken as 1 for sample villages possessing the characteristic and 0 otherwise.

### 5.2.2 Schedules 18.2 (Rural/Urban):

(i) For  $j$ -th second-stage stratum of a stratum  $\times$  sub-stratum:

$$\hat{Y}_j = \frac{N}{n_j} \sum_{i=1}^{n_j} \left[ \frac{H_{ij}}{h_{ij}} \sum_{k=1}^{h_{ij}} y_{ijk} \right]$$

Where  $n_j$  is the number of sample FSUs with non-void  $j$ -th second-stage stratum.

(ii) Aggregate  $\hat{Y}$  is obtained combining all the second-stage strata:

$$\hat{Y} = \sum_j \hat{Y}_j$$

Note: Values of  $j$  are 1, 2, 3, 4, 5 or 6

### 5.3 Overall Estimate for Aggregates for a stratum:

Overall estimate for a stratum ( $\hat{Y}_s$ ) will be obtained as

$$\hat{Y}_s = \sum_t \hat{Y}_{st}$$

### 5.4 Overall Estimate of Aggregates at State/UT/all-India level:

The overall estimate  $\hat{Y}$  at the State/ UT/ all-India level is obtained by summing the stratum estimates  $\hat{Y}_s$  over all strata belonging to the State/ UT/ all-India.

### 5.5 Estimates of Ratios:

Let  $\hat{Y}$  and  $\hat{X}$  be the overall estimates of the aggregates  $Y$  and  $X$  for two characteristics  $y$  and  $x$  respectively at the State/ UT/ all-India level.

Then the combined ratio estimate ( $\hat{R}$ ) of the ratio ( $R = \frac{Y}{X}$ ) will be obtained as

$$\hat{R} = \frac{\hat{Y}}{\hat{X}}$$

5.6 Estimates for Visit 1, Visit 2 and for the two Visits combined may be obtained separately by restricting the sample FSUs to the respective Visits.

## 5.7 Estimation of Errors:

### 5.7.1 Formula for estimated variance (for Rural/Urban):

5.7.1.1 The sampling scheme in the current round was SRSWOR. However, if the sampling fraction is small, then the difference between variance estimates using the SRSWR and SRSWOR becomes negligible. In such case, samples can be treated as drawn with SRSWR and variance estimates becomes simpler in form and easy to calculate. It has been observed that overall sampling fraction is quite low in the current situation and hence there is not much loss in accuracy of variance estimates if SRSWR is assumed.

$$V\hat{a}r(\hat{Y}) = \sum_s V\hat{a}r(\hat{Y}_s) = \sum_s \sum_t V\hat{a}r(\hat{Y}_{st})$$

$$V\hat{a}r(\hat{Y}_{st}) = \hat{B}(\hat{Y}_{st}) + \hat{W}(\hat{Y}_{st})$$

$$\text{where } \hat{B}(\hat{Y}_{st}) = \frac{(1-f_{st})}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} (N_{st}\hat{Y}_{sti} - \hat{Y}_{st})^2; \quad \hat{W}(\hat{Y}_{st}) = \frac{N_{st}}{n_{st}} \sum_{i=1}^{n_{st}} \sum_j \frac{(1-f_{stij})}{h_{stij}} H_{stij}^2 S_{wr\_stij}^2$$

### 5.7.3 Formula for estimated variance of ratio $\hat{R}$ (for Rural/Urban):

$$M\hat{S}E(\hat{R}) = \frac{1}{\hat{X}^2} \sum_s \sum_t M\hat{S}E_{st}(\hat{R})$$

$$M\hat{S}E_{st}(\hat{R}) = \hat{B}_{r\_st}(\hat{R}) + W_{r\_st}(\hat{R})$$

$$\text{where } \hat{B}_{r\_st}(\hat{R}) = \frac{(1-f_{sti})}{n_{st}(n_{st}-1)} \sum_{i=1}^{n_{st}} [N_{st}(\hat{Y}_{sti} - \hat{X}_{sti}) - (\hat{Y}_{st} - \hat{R}\hat{X}_{st})]^2;$$

$$\hat{W}_{r\_st}(\hat{R}) = \frac{N_{st}}{n_{st}} \sum_{i=1}^{n_{st}} \sum_j \frac{(1-f_{stij})}{h_{stij}} H_{stij}^2 S_{wr\_stij}^2$$

### 5.7.4 Estimates of Relative Standard Error (RSE):

$$R\hat{S}E(\hat{Y}) = \frac{\sqrt{V\hat{a}r(\hat{Y})}}{\hat{Y}} \times 100$$

$$R\hat{S}E(\hat{R}) = \frac{\sqrt{M\hat{S}E(\hat{R})}}{\hat{R}} \times 100$$

## 6. Multipliers:

The formulae for multipliers at stratum/sub-stratum/second-stage stratum level for a schedule type are given below. The formulae are applicable for both Visit1 and Visit 2.

Schedule type	Sector	Formula for multipliers
18.2	Rural/urban	$\frac{N_{st}}{n_{stj}} \times \frac{H_{stij}}{h_{stij}}$
j = 1, 2, 3, 4, 5, 6 for Schedule 18.2		

### Note:

- (i) For estimating any characteristic for any domain not specifically considered in sample design, indicator variable may be used.
- (ii) Multipliers have to be computed on the basis of information available in the listing schedule irrespective of any misclassification observed between the listing schedule and detailed enquiry schedule.

## FEEDBACK FORM

1. **Name** (optional):

2. **email id** (optional) :

3. **Your field of Work:** (please tick (✓) the relevant)

- (a) Govt Sector                      (b) Corporate Sector                      (c) Research                      (d) Civil Services  
(e) NGO                      (f) Education                      (g) Art & Culture                      (h) Media  
(i) Business                      (j) Student

4. Please mention the report/publication you are commenting on:

---

### CONTENT

5. How useful/relevant is the report for your professional interests (please tick (✓) the relevant)

- (a) very useful                      (b) Moderately Useful                      (c) not at all useful

6. How useful/relevant is the report for your personal interests (please tick (✓) the relevant)

- (a) very useful                      (b) Moderately Useful                      (c) not at all useful

### PRESENTATION

7. How do you find style of presentation of information of the report? (please tick (✓) the relevant )

- (a) Excellent                      (b) Very Good                      (c) fair                      (d) not good at all

### ACCESSIBILITY

8. How easy was it to collect a copy of the report (soft/hard copy)?

- (a) Very easy                      (b) Moderately easy                      (c) difficult

### 9. ADDITIONAL COMMENTS

**Please note:** These comments may be used for internal and external promotional purposes but will not be attributed to the person making them, unless explicitly agreed to this in writing. (please add extra sheet if required)
